From: hq54@aol.com
Message-ID: <19991001140445.16102.00000289@ngol08.aol.com>
Source record: 97245

Hi All,

I have 6 Transcrypt secure boards, I believe they are the SC20-400 or similar. This is thier low tier unit, specifically set up for the GP300 radio, but can be used with any radio, all you need to do is contact Transcrypt, and they can either do it for you, or provide the instruction and schematic to do it for yourself. These units can be used through all repeaters, even using PL decode and encode, perfect for any small bussiness that needs to keep the competition from listening in on thier conversations. I am Looking for $70.00 each, OBO, but I will certainly do better if you purchase all of them. Please reply VIA E-Mail.

Thanx
Mike

I use an Alinco EMS-14. It is a direct plug in to my TS-440 and
sounds great. I got it at a hamfest for under $50.

16. Re: Yaesu FT-100

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-01 00:00:00 UTC
From: Brian Iler <brian@teamnrg.com>
Message-ID: <2U8J3.305$jl5.9660@typhoon-la.pbi.net>
Source record: 97257

The ATAS-100 has an additional kit for base use called the ATBK-100. This provides some additional loading coils for tuning. The ATBK alone might not be enough. In my case, I also ran 2 pieces or wire (about 20ft each) in a horizontal arrangement, that seemed to do the trick.

17. FS Yaesu FT-847 Manufactured May 1999

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-01 00:00:00 UTC
From: "Samuel S. Yates" <ab4n@email.msn.com>
Message-ID: <eWp0z0ED$GA.310@cpmsnbbsa05>
Source record: 97258
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have an "nearly new", Yaesu FT-847, without any modifications what-so-ever. Serial Number is 9E200059, which indicates that the date of manufacture was May 1999. This radio was never mobile, and is in "as new" condition.

I also have an ICOM IC-746 that I am keeping, so the FT-847 has gotta go. It has less than two hours transmit time on it, but when I did use it, its performance was flawless on HF, VHF and UHF. I received many unsolicited comments on the quality of my audio, and the receiver in this guy is HOT! Yaesu has also done a superlative job on this radio's DSP, it really works great! The early reported bugs seen in early versions of this model radio have already been fixed by the factory before they shipped them to the dealers.

My price is $1325 plus shipping and insurance. I will double box to ensure safe transit to you.

If interested, please reply via email to ab4n@email.msn.com. Leave your phone number if you would like me to call you back.

Thanks for reading this post.

22. HR2600 T/R time ???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-01 00:00:00 UTC
From: Michael <me_hamman@yahoo.com>
Message-ID: <7t3d7nbic1@news1.fast.net>
Source record: 97263

I have a HR-2600 that is kinda strange, I think. The receiver kicks in 2 full seconds after the mic key is released. The rig stops TX as soon as the key is up but I can't hear anything until after the delay.
Does anyone out there have a 2600 that has a .5 second T/R time as I have been told is the norm????
Anyone have a clue is guessing what could be the rig's problem in life??

I have ordered a chipswitch for it. I hope that will help. I followed the mic line directly to the processor. The 64 pin chip controls the T/R of the rig but I'm not sure if it really is the problem.

Any help is appreciated

Thanks
Michael

26. Re: Comments on the MFJ CW keyboard?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-01 00:00:00 UTC
From: doug.behl@sympatico.ca
Message-ID: <37f54351.5259242@news1.sympatico.ca>
Source record: 97267

Hello Jeff,

If you have an old PC, you can download some DOS software that sends and receives CW using the serial port and the plug for the key. You need to build a $5 interface cable. Works great! Even if you don't have a PC, you could probably pick up an old laptop for less than the cost of the MFJ, and you would have a complete PC.

I use a program called CW version 1.04, and have tried another one called Pro CW. CW is better. Tried HamComm, but was too complicated for my simple needs.

Source record: 97271

I believe that there was a slight mod for this unit for this rig for using it on a tnc but this sounds a bit long. You may want to check you ptt switch and "send" button for any "gummy" like material. Good luck, especially since 10m should be a blast in the next few years. (I've got a HR-2600 myself)

I purchased and used the mfj 498X deluxe.... It worked well for one year and ten days
(just out of warranty) I E-mailed MFJ several times to get a schematic; with no reply..
Have also had several MFJ tuners and other gadgets; I find their stuff works well
for a very limited time.... If your set on a stand alone keyboard from MFJ order
it from the factory and don't buy it unless they will sell you a schematic with your
order...Better yet find an old used heath keyboard, most are still working well...
Just my 2cents......

Hi all,

I have an old Tektronix 453 oscilloscope that has a bad HV/Flyback
transformer and I have been having a tough time finding a replacement.
If anyone has a flyback for the Tek 453 or happens to know where I can
find one please let me know. Also, if anyone has a scrap 453 they
would be willing to sell for cheap, I would be very interested.

Thanks in advance!

Hi Fellas;
I have for SALE:
Real Nice Nye Viking MB II Roller tuner, capable of legal limit. It isI s/n 1381 and comes with the MANUAL. It has a very large Variable Copper Ribbon Inductor with a Split Section HV Variable Capacitor. Tunes any wire over 1/8 wavelength long or longer in Excess of 3 KW into loads of 40 to 2000 ohms from 1.5 to 30 mhz. Can Handle Coax, long wire and Twin feeders. The Balun was an option and this one appears to have been added later. I have tested this tuner at 100 watts in my dummy load and it appears to be just fine. There are a few, very few paint chips in it's grey Hammertone cabinet but Front panel is just about Mint with no scratches or chips! It measures 14"w x 12'dp x 8'h with feet. While this may not be the newest model, it sure is built like the "Brick outhouse" we've heard about.
PRICE SHIPPED CONUS is $300.00
Here are a few pictures for interested parties>>

> an outlet in the house?

You will need a 12-volt power supply. It needs to be regulated and capable of approximately 2 amperes of current (or more). Radio Shack carries such a supply for under $100 - probably quite a bit under, but I can't find my catalog right now so I can't tell you how much.

Of course, you will also need an antenna. There are several ways of handling that. (including sticking a magnetic-base mobile antenna on top of an air conditioner or something..)

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

I've got one to repair and, luckily, I have a manual... however the transistors listed in the manual are not the ones in the unit. My manual is from 1970 and the transistors have a 1981 date code.

The transistors in question are labeled 417-852 which cross to an NTE 152, but since this is a DC coupled circuit, parameters are critical. The manual calls for a 417-175 (2N5294) which also crosses to an NTE 152. Since I cannot see any indication this unit was repaired before, I have to assume Heath made a substitution sometime in the life of the kit.

Does anyone have a newer manual that would list the JEDEC number (2Nxxxx) for the 852? Or possibly the specs for the 175, most needed is the beta.

Thanks

Ed, K1ZOK

I have two (2) Yaesu FT-51R HT's for sale. The FT-51 is Yaesu's
top-of-the-line HT with built-in help screen and s/w control.

Each radio is in excellent condition (grade 8.5-9)

Each radio has 3 batteries:
ONE FNB-31 (compact battery)
TWO FNB-38 (5W battery)

One automobile charger/mobile PS, model PA-10A

One cloning cable allowing the memory contents of one radio to be copied to
the other

I purchased both radios new and have the original boxes, manuals, and
chargers

Sold only as a package

Price: $650 or best offer--for BOTH radios

How can I get the radio out of external DTMF control mode? Is there a CPU reset command? I cannot find any information in the manual that tells how to get it out without the external DTMF commands. I can't get the external commands to work.

Source record: 97333

Hello !
I'm having problems with my HC-4 mic and my Icom IC-725.
It seams that it is not giving much punch on the audio
comparing with my other mic (a desktop mic from Icom
model SM-20)
I am using a capacitor in series with the Heil and it is
better than direct connection, nevertheless it is still
not driving full power out of the rig.
The value of the capacitor is .47 uF , I wonder if I need
to use a preamplifier or just a change in the capacitor value ?

Ed,

It's been awhile since I worked on one of these old buzzards. The local volunteer firemen made a couple of house payments for me as I repaired many of these units in the 70's. I couldn't find my manual but I did find my repair notes. For what it's worth.... 417-852 were a pair of transistors. I also
used TIP31B or TCG184 (now NTE184) as replacements. Always replace them in pairs. If nobody else responds... let me know and I'll did a little more for the
manual. Good Luck!

Ralph

Think you have the right idea. Only by identifying the good
and the bad can we make this system work. One side is always
exposed to some extent. If your the buyer and send certified
fund then for a couple of days the seller has the money and
the equipment. If he sends it with out waiting for the
funds, the buyer has his money and the equipment. It is one
of those systems where your honor and your word are
EVERYTHING. It is nice to know who the good as well as the
bad guys are.

How are you mounting the antenna? There is a fixed mounting kit for the ATAS-100 that has a counter poise. If you are not using that you need to think about getting one. You can try constructing your own counter poise by running ground radials out from the antenna along the attic.

You might have just as good luck with a dipole fed by ladder line to a tuner. Just make the dipole as long as possible for the space you have in the attic.

What Relay??????? The problem was the two 4.7uf caps that are located near the audio amp. The posted fix was to replace them with .01uf 50wvdc caps. I installed .1uf and bingo the problem went bye bye!

Hey Rick,
Even though your post does have some humour to it, suggesting such a thing as connecting 12VDC electronics directly to 120VAC is still dangerous even with a switch installed. If these items are not fused properly a fire could result. Not to mention that it makes us hams in general look like a bunch of unhelpful smart a**es.
Win them over to amateur radio by being an "Elmer"..... Mark W4UDX

For those of you having a particular problem with the Ft-2600, and its
mic
element hot all the time, allowing the thing to think it is hearing DTMF
tones....well, go to menu 17, and lock out the keypad! That should end
the
problem.

The De9 plug is the interface to the radio.
Pin1 is tx audio to your radio
Pin 3 is PTT for the radio
Pin 5 is receive audio from the radio.
Pin 6 is ground to the radio

The round coaxial plug uses anything from 6V or so above. Common is
12V.

The DB25 female jack is the same as an external modem. I use a
external modem cable to conenct to the KPC3.

If using comm 1, which on my PC is a DE9, then a external modem cable
is in order. If you need pin outs, let me know and I'll send them.

If using comm 2 , which on my PC is a DB25, then the external modem
cable is a db25 to db 25 "straight thru" cable, where pin 1 goes to
pin 1, pin 2 to 2 etc.

Source record: 97198

All:
I have a Toshiba Satellite 410CDT color notebook computer for sale. For exact specification check out this link:

http://www.csd.toshiba.com/cgi-bin/WebObjects/Toshiba.woa/wa/showSSDetailedSpecs?productTypeId=1&productFamilyId=10&productSeriesId=191

The computer has only been used in a home environment and never mobile. First as my secondary PC then as my wife's email machine. It is in excellent condition both aesthetically and technically. In summary it is a Pentium 90 or 100, 40MB RAM and a upgraded 1.4MB hard disk. The unit has a built in CDROM drive, Active
matrix screen, 28.8 PCMCIA modem and network card. I have the original 810MB drive and RAM module, both included.

I was originally looking to trade for a recent vintage VHF/UHF mobile but recent events have left me needing the cash. Therefore, I am selling the notebook and accessories for $350.00 OBO.

I would prefer a sell locally due to the risks involved with shipping however, I will consider all offers.

Thanks in advance, please contact me via email at this time.

78. Ten Tec Pegasus

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-02 00:00:00 UTC
From: WA1RD <wa1rd@home.com>
Message-ID: <oRqJ3.738$Q6.46893@news1.wwck1.ri.home.com>
Source record: 97200

To all those interested, Hello:
I, too, am somewhat puzzled by the lack of attention Pegasus is receiving. I have been singing its praises from the mountain tops. I love it. It has become my #1 radio, beating out my beloved FT-990 and IC-706. As it is for each of us, my reasons are tailored for me and my needs. So, from my perspective, here it goes...

I mostly rag chew. My transmit audio must be very clean and have good presence. According to reports from (yes, the group I hang out with) all different 80 and 40 groups, the Pegasus transmit audio meets and exceeds those requirements. There is no "Proc" switch either. My ham friends who know my real voice like what they hear from this $895 radio.

Receiving with the noise reduction algorithm is a pleasure. I don't think any manufacturer has yet marketed the "perfect" noise reduction system. What I like you may not. But I will tell you this -those noisy summer evenings on 80 are now workable for me when I use to give up. The plethora of filters (both transmit and receive) have given the amateur tailor made audio. The pass band tuning helps me ignore bothersome adjacent signals.

Being able to make my faceplate as large as I want helps me to see what I am doing, i.e. the frequency I am on! My vision is deteriorating rapidly so this feature is now high on my priority list. I suspect others with similar eyesight problems are happy over this new breed of "virtual" radios. Other programmers may invent/create more form versus function solutions now that Ten Tec is opening up the source code. With its downloadable software and firmware bios, Pegasus will be recreated over and over again. This very well may lead to a new era in how amateur radio is executed.

I did have to purchase a strong 25 amp continuous power supply. A 30 amp (25 cont.) switcher from Astron for $119 did the trick. When I used lesser supplies all sorts of weird things happened. I also run an AL-1500 and resonant coax fed dipoles. I don't have any switcher, computer or monitor noise in the Pegasus. I was careful about not having ground loops.

Check back with me in six months to see if I am still as enthusiastic as I am today over the Pegasus. The radio certainly seems to fit many of my needs in an economical fashion. By the way, I first used an old Pentium 75 laptop which worked fine. I would think most computers up to ten years old would work.

Good luck and best wishes. I hope I answered enough of your questions.

73,
David Wa1rd

OK, how about if instead of 120 VAC, simply substituting a 9 volt
transistor radio battery???

Source record: 97210

I own the 2800 and find the display readable, although reduced in bright sun light. Just mount the remote unit at the right angle -- a compromise at best, and close to instrument dash board level -- not low (I used self adhesive tape). The in-band dual receive is not a big deal to me, as I have never needed it. Otherwise, the radio is a very good unit for its intended purpose.

Help....

I have done something really stupid. I accidentally reversed the polarity on my FT-8000. The unit was never turned on while the polarity was reversed. I corrected the mistake before turning it on but now with the correct polarity, it will not turn on. I opened the radio and verified that it is getting power.

Any suggestions? (Besides a swift kick in the pants!)

Thanks,

Jim....

Check the inline fuse. Most modern transceivers have reverse polarity protection incorportated so that it blows the inline fuse on the power lead.

If you did not have an inline fuse, then it probably took out a chunk of circuit board near where the power lead comes in. You should be able to repair that section of circuit board and be back in business.

You may try looking around on the circuit board for a micro-fuse also. These look a lot like a resistor and you will need to trace them with a voltmeter or an Ohm-meter for continuity. A schematic would be extremely helpful at a time like this.

If it still doesn't work, it may be time to send it back to the factory.

Jim you popped your polarity diode. It should be the big one where the
power leads enter. This is put in line to prevent such accidents.

After today's barrage of auction posts, some labeled and
thus removable with filters and some not so labeled, it seems
time to recognize reality and make a change.

The auction folks have no need to post here. 100% of those
who like auctions know exactly where to go to view everything
on them. If they wait for posts here they'll miss a lot of stuff!

The rest of us are forced to filter out the auction posts, and to
tolerate a new barrage of cleverly labeled auction posts (mislabeled
to bypass our filters).

The fact is that non-auction folks need these lists and auction folks
do not. Let's stop lining the pockets of the auction corporations
by allowing them to abuse this list as an advertising forum. They
have millions in their advertising budgets, we don't.

Sorry for the bandwidth, sure is a whole lot less than the no-longer-
necessary auction posts waste! 73, DavidC K1YP

Let's take a closer look at yet another "barrage"
of sour grapes and illogic.

DavidC wrote:
>
> After today's barrage of auction posts....,
Here are the subjects of the posts received here today (saturday)
on rec.radio.amateur.boatanchors
(different ISPs may send you more or less messages):

Help, advice, information, wanted, etc.: 22
FA: 3
FS: 12
Griping about Ebay: 7
FA post not properly marked: 0, as in ZERO, as in NONE.

'nuff said about that.

> The auction folks have no need to post here.
Unsupported personal demand for control.

> 100% of those who like auctions know exactly
> where to go to view everything on them.
Unsupported personal opinion.

> The rest of us are forced to filter out the auction posts,...
Just like you're "forced" not to read each and every article
and classified ad in your morning paper? Nonsense.

> and to tolerate a new barrage of cleverly labeled auction posts > >(mislabeled> to bypass our filters).
Demonstrably untrue as proven above.
Moreover, even the honest FA posters want mislabeling stopped
and, for the most part, it has been.

> The fact is that non-auction folks need these lists and auction folks
> do not.
Unsupported personal opinion and demand for control.

The bottom line has not changed- the vocal minority continue to
protest and thump their chests, claiming high-minded reasons
which cannot stand up to even the simplest tests of logic.

The truth is that they are motivated by baser emotions-
greed, envy, a primative need to force their control on others,
and denial of their personal responsiblity for what they freely read.

They continue to demand that, at a party with 1000 different guests
with 1000 different likes, there be no chocolate cake
because *they* don't like it. It's a wonder that they can't
grasp the simple concept: "If you don't like it, don't eat it."

But please continue on the (tenth, eleventh??) attempt to
raise support for changing the charter. While they're
doing that, they're leaving honest people alone to
go on living real lives.

(Personal attacks by the minority will follow.
It's their way when facts and logic don't support them.)

Sincerely,
Dave S.

What good will a charter change be? You're wasting your time.

The facts of life are that anybody can post whatever they wish anywhere they wish on non-moderated newsgroups. That's the way it is an you can change charters until you're blue in the face and it won't do any good.

Your energies might be better spent politely asking those posting in PRIVATE e-mail to honor the "truce" of using FA or eBay in the subject line.

Let's just filter out any message with "charter" in it.

How about if all the complainers use "useless complaint" or "everybody look at me" in the subject so the
complaints can be filtered as easily as the FA posting can be. I suspect the complainers don't have an
elementary school kid in their neighborhood to show them how to set the filters.

Gentleman,

I have been using a Shure Microphone with a Kenwood TS-450 for some time with good results.
I run the mic through a Berhinger mic preamp and I get excellent reports. I have recently purchased
an IC-756 in hopes of doing 6 meter AM (my Dad's favorite mode) to chew the rag with some
old timers. I noticed that the mic for the Icom is an electret condenser type and my shure is a dynamic
mike. Gents, are there any caveats with this? Thanks in advance for your comments.

> time to recognize reality and make a change.

You didn't preface your subject line with WAAAAA (Whining About Auctions Again As Always). Can you also add this to your new charter?

> Let's stop lining the pockets of the auction corporations
> by allowing them to abuse this list as an advertising forum.

Does this include all the commercial ads posrted by hams? How about the Hams running shops to make a living, do we ban them? Where does it stop David??

> Sorry for the bandwidth, sure is a whole lot less than the no-longer-
> necessary auction posts waste!

Actually it was longer than most auction posts. But you are special and this NG should only carry what YOU want to see?

Nobody in the Whine About Auctions Action Association seems to want anwser this question I have asked again and again. Do you read EVERY post on the NG. Actually open it up and read it?

WAAAAAA!

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space,tw.bbs.rec.radio.amateur,uk.radio.amateur

Hello,

I like to make a list about all available AMIGA software that is useble for
radio amateur purposes.
So if you now some name, a link on the net, a address where to buy or other?
Please let me now by mailing me.

I'll make the list vieweble for everyone at my homepage.

All information is welcome!

Thanks in advance.

> Anyone have a clue is guessing what could be the rig's problem in life??

Sounds like a leaky transistor driving the relay. Also check any electrolytics in that part of the circuit, they have a finite life, and will give you no end of trouble as they die.

Ed:
I think those were NPN transisters, is that right? Anyway, I have
built and repaired numerous Heath Electronic Sirens. I would
replace with just about any simular power transister and they worked.
In fact one transister I found was a heavy duty replacement, and
lasted alot longer that the old ones. Good luck, Doug, N7JHS.

117. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7t4750$n41$1@news.hawaii.edu>
Source record: 97284
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

*rec.radio.broadcasting (devoted to the broadcast industry; moderated)*
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

*It's been sadly reported that the moderator was lost to us in an
automobile accident; the future of this newsgroup is not known. 73 Bill...

119. Anyone know the value of my TS 50 S ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-02 00:00:00 UTC
From: pornguy@porngoy.com
Message-ID: <37f8afd3.20787200@news.etob1.on.wave.home.com>
Source record: 97286

Hello,

I have a Kenwood TS 50 S, I purchased it in the UK back in 95 and
used it for about a year, then just stored it.

It works perfectly, and was modified in the UK to TX/RX from 0 - 30

It puts out a solid 100 across all the bands (where permitted) and is
in pretty nice condition.

I do have the original mike for it.

Whats it worth ?

David
Orac@home.com

thanks

For Sale

Apple's QuickTake 150 for Windows

$150 plus shipping if needed

Lewis (km5bh@swbell.net)

Apple's QuickTake 150 ($629 list) is the granddaddy of entry-level digital cameras. Its predecessor, the QuickTake 100, became a best-seller among users at small and mid-size businesses and in the education market. Although it has been somewhat eclipsed by less expensive devices offering higher resolutions, larger storage capacities, and more features, we found there's still plenty of life in the QuickTake 150.

The QuickTake 150 is a simple point-and-shoot device with a fixed-focus lens and 1MB of built-in memory. That's enough RAM to capture 16 best-quality or 32 standard-quality 640-by-480 images. Weighing about a pound, it's comparable in size and shape to a small paperback. Its uses three AA batteries.

124. Re: Comments on the MFJ CW keyboard?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-02 00:00:00 UTC
From: Max Imo <reply@to.group>
Message-ID: <tgnJ3.1346$9B.83302@news.corecomm.net>
Source record: 97291

I prefer using an inexpensive older computer running DOS, and one of the CW programs such as CW 104, CW or others. The reason why is because I can see what I have typed and I can make corrections (sometimes) before the word is sent. I own and have used the MFJ keyboard, and it works well. However, the CW programs have more buffers, and are easier to set up when you are entering macros so I have abandoned the keyboard in favor of the computer. I believe someone has a Jersey City keyer program that is awesome. I understand it has either ten or twenty macros and lots of other goodies not even found in the super fancy keyers.

LOL
Max

Some Items have been added • some are marked sold or awaiting payment before
shipping.

Note: I don•t buy junk and I take perfect care of everything I own. Nothing
is damaged or scared. These Items have been used but taken perfect care of.
I HAVE LOADS MORE OPYMPUS STUFF but have not had the time to write it up
yet. I can provide enough high resolution images for you to judge for
yourself and to feel comfortable these are in the condition I state. If you
want a photo of the mount the front element or thru the lens elements • no
problem I am a serious hobby photographer - not a work horse pro. Im the guy
you dream of buying stuff from!
JPG DETAILED PHOTOS OF ITEMS ARE AVAILABLE FOR SERIOUS INQUIRES
All Items are in EXCELLENT TO PERFECT CONDITION.
I ship Fed-X you pay COD Money order or cashiers check. You pay shipping.

REASONABLE OFFERS WELCOME. Cut throat Dealers and low bidders and time
wasters • GO AWAY.

OLYMPUS GOODIES

GLASS
======
1.4X Converter $430 B&H $300 from me

TOKINA 300mm f/2.8 ATX APO w/Hood
OLYMPUS MOUNT. TOP PERFORMER!!! Huge hunk-O-perfect glass. 112mm front
filter size. I have stunning wildlife photos taken with this lens. This lens
with a 1.4X or 2X converter is sharper then cheaper 400mm lenses by a long
shot. I know I tested them in detail. Top quality costs, but pays for itself
every time you use it. I have the original lens case and a custom made
padded Nylon case for easy carry! I also have the heavy metal lens shade and
a custom made light weight shade that velcros on. I am and outdoor

photographer. Photos shot with this lens have been published. Sells for $2300 if you can find one. Will sell for $1900 OR BEST OFFER If you serious about wildlife photography this is it! Top rated by several magazines including Outdoor Photographer (George Lepp).

** Awaiting check Possibly SOLD OLYMPUS 20MM 2.8 SUPER MACRO LENS. For Extreme close up. Sells for $580 new Will sell for $425 OR BEST OFFER. PERFECT CONDITION I don't think it was mounted on a bellows more than 2 times. This is a specialized macro lens. Its not a general photography type lens.

** Awaiting check Possibly SOLD OLYMPUS 38MM 2.8 SUPER MACRO LENS. For Extreme close up. Sells for $580 new Will sell for $425 OR BEST OFFER. PERFECT CONDITION - I don't think it was mounted on a bellows more than 2 times.. This is a specialized macro lens. Its not a general photography type lens.

OLYMPUS 16MM FULL FRAME FISH EYE. THIS LENS IS A KILLER!!! SUPER WIDE. Sells for $1180 in NYC Mail order shops. Will sell for $900 OR BEST OFFER PERFECT CONDITION.

Source record: 97110
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have two Instructograph Code Machines (1950-1960 vintage) that the oscillator doesn't work. It uses a 70L6 tube, a myriad of old capacitors that has unreadable marking , an output transformer, etc. They appear to have been hand wired by a person with one hand tied behind his back, but I guess they worked pretty well in their time.

Does anyone have a schematic for this relic? Please contact me at ab4nxxx@email.msn.com

Be sure to remove the "xxx" which I add in to help reduce the SPAM than always follows a newsgroup posting.

I just bought a very clean used TS-690S with the internal
antenna tuner from the original owner. He told me that he installed
the tuner, because the 690 was not available with the tuner installed
by the factory. Basically, the 450 & 690 are the same radio except for
the 6 meter addition on the 690. The 450 was available with a factory
installed tuner, but why not the 690 ??? Does the factory installed
tuner work any better than the user installed one ???

I like others will wait for the QST Review. QST mentioned the TEN TEC PEGASUS was onw of the most interesting radios at
the Dayton Show so I would assume they are going to give it a review. With all the New radios that have come out and had problems (customers sending the radios back for repairs multiple times, i can see why a lot of Hams are gunshy at spending
$ on a unreviewed radio. I am sure the Ten Tec radio will fare well but I need a positive review to make me feel better.

Hi, I've got a TR-4C, MS-4C, AC-4C for sale. The radio is serial number 34886. The radio might be a 9 out of 10. I never cared for that numbering system much so I have pictures available on the radio and speaker/supply. There is a scratch on the right side of the MS-4.It works great and I use it all the time you can hear it on the air any time in the evenings or Saturday morning, (depending on your location). E-mail at swb1@flash.net for pictures. I'm asking $400.00.
Thanks
Steve KC5TFL

Thats what Kenwood decided to do.

> Does the factory installed
> tuner work any better than the user installed one ???

Its the same tuner (AT450). Doesn't work on 6M and doesn't work on
receive.It has only a narrow range on the amateur bands and was meant to
allow wider
operation with a resonant antenna. Hopefully, the previous owner reset
the CPU
when he installed the AT-450, otherwise it doesn't work at all.

I have the Mirage/MFJ 2M amplifier and am disappointed with the manufacturing quality. The board has several "fixes" clustered on it. They did not bother to do a new layout, just tacked things on. The Mirage 70CM amp in contrast is much cleaner. I have no experience with the TE systems amplifier. Perhaps they are cheaper because they must compete with MFJ. The 2M Mirage amplifier has an integral preamplifier, I don't use it as I have a tower mounted preamplifier.

Extra clean, no mods (except for factory 10mt mod). Two Amperex 3-500Z tubes (less than 2 yrs old). Used by a non smoker. See picture at www.qsl.net/k5wim/l7.jpg (that's L7.jpg but lower case). $890 + shipping

163. Icom 706Mk2G CTCSS problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-03 00:00:00 UTC
From: James Denmead <james@applemead.freeserve.co.uk>
Message-ID: <7t8hd1raa1@news5.svr.pol.co.uk>
Source record: 97130

I have just purchased an Icom 706 MK2G. When I have the CTCSS tone enabled for repeater access it is audible as a whistle beneath my voice. Some have described it as a fan running in the background, my main repeater filters this out so it only came to light when someone listened to me on the input. It does go when the CT is disabled so I know this is the problem.

I have contacted the dealer who are speaking to Icom, but at the moment they are saying it is normal. Anyone else had this problem or can someone test there radio to see if they can hear the CT tones as well.

Source record: 97135

Mark, I have a Motorola motorcycle radio. It may be much later than you are looking for though. I am not sure of the model number, but will look at it in the next day or so. The one I have is a 2 piece unit. Tha main radio mounted to a rack on the back, and had the remote for the handlebars with the mic connected there. It is a single channel unit. I am not even sure of the working condition. I know that it work when I got it, and I as well as several volunteer firefighters have used it with good results. It is crystalled for 155.760, but that is easlity changed if needed. If interested, e-mail me, and we'll see what we can come up with.

Yes, put up a fiberglass flag pole. Put a wire inside of the pole and
run it to your radio. The vertical antenna is then hidden. Check out
the hand book for ideas there are several in there. good luck.
Ron

I have three (3) model BAH100 mobile amplifiers made by Regency.
Drives with about 15-25 watts for 75-100 watts output. Powered by
13.8 DC.

150-174 MHz but they do work OK down to 145 MHz by retuning the
variable capacitors.

Removed from service in working order.

Copies of service manual available with purchase.

$ 150.00 for all 3 or $ 75.00 each

Please reply via e-mail

Personally, I checked it out and wasn't impressed. My mistake was commenting on the replacement clip that's been offered here in the newsgroups. I bought one but wasn't impressed and mentioned that. The problem was both that you're not allowed to have that opinion and also that the topic had already been discussed and I should have read their entire archives before posting. To me, it wasn't worth foolin' with these folks. I left.

223. Tall Antenna Tales

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-04 00:00:00 UTC
From: bshort@speedchoice.com
Message-ID: <MPG.1262dc7fddef16669897ca@news.speedchoice.com>
Source record: 97171

Tall Antenna Tales

A local ham friend (K7JAY) recently bought parts of
several antennas from a local horse trader (KI7ZZ).

The idea was to take parts of a Mosley PRO-95 and
PRO-67 and make a PRO-96 and a PRO-57 (which
was sold to W7HSP).

So, now 2 local hams have parts of 2 antennas each.

Next, I (K7ON) got recruited to help install the PRO-96
at my antenna farm after reading a comparison report
by N0AX.

K7JAY went with me to the desert one Saturday morning
to assemble the PRO-96, but it has now been about 5 or
6 more Saturdays and the antenna is still not assembled.

First, it was discovered that the traps had to be re-wound
and the inner trap tubing (forming the capacitance) cut.
Getting the proper turns/length took a couple weeks of
calls to Mosley in addition to actual labor. As I understand
it, the traps are all modified.

Then there is the issue of tubing lengths. I ended up donating
part of my stash of Texas Tower aluminum tubing to this effort
as well as much time looking at Mosley manuals for the PRO-96,
PRO-95, and PRO-67.

The antenna is still not assembled and the current estimate by
K7JAY is a couple more days of tubing cutting. Since he has
over $1000 invested as well as all of this time, he wants to see
it through.

Personally, I would not have touched a Mosley antenna from the
start! Furthermore, the report from Champion Radio and N0AX
casts a dark, but dubious, shadow on Mosley antennas.

From what I have observed, the assembly manuals are quite vague
though perhaps adequate for someone assembling one from a new
carton. Mosley was contacted repeatedly by email, US Mail, and
by phone before helping with the modification (I think I now understand
their reluctance to become involved). There is nothing in the way of
technical detail in their manuals.

So, at this point, I have KLM monobanders for 15 and 20 ready to
go up on the tower to be used for the PRO-96 experiment (which

could then be compared to a TH-7 at the same QTH). Should I
continue to support this misguided effort?

The questions are:

Does a Mosley PRO-96 even properly assembled work properly?

What is the performance?

Am I missing something or is this far too much expense and effort
for what it is worth?

What is Mosley's current reputation? (I had a TA-33 years ago that I
liked)

Has anyone else put up a PRO-96 and if so what comments have you?

As I see it, the fellow who bought the "PRO-57" which ironically he is
upgrading to a PRO-67 at great expense and the fellow with the "PRO-96"
have nothing more than a pile of scrap. Or am I missing something?

Thanks, Brian

224. help: replacing front panel lamp kenwood tm-231a

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-04 00:00:00 UTC
From: coyotes@tampabay.rr.com
Message-ID: <37f8d074.8200117@news-server>
Source record: 97172

One of the two front panel display lamps blew out on my Kenwood TM-231A. Does anyone know where to source these lamps or what the specifications are? The service manual lists them as a Kenwood part # B30-0869-05.

I've posted a pix of the lamp here:
http://bigdummy.home.mindspring.com/lamp.jpg

Thanks in advance,

Dan N4WEQ

Source record: 97174

Hi Oscar,

I have got my FT-100 this spring and have used it mobile mainly on HF. I use it with the ATAS100 antenna and it has been just a great mobile rig. I use it in a Ford Explorer and have taken it on several multi day road trips into the back country mountains here in Colorado.

There did seem to be a couple of problems with some of the first run radios but that is to be expected for most new products. I suggest that you go to http://www.onelist.com and sign up to the FT100 mail list. There you can see what owners think and read the past archives about the radio.

From: tporcella@my-deja.com
Message-ID: <7tb353$jj8$1@nnrp1.deja.com>
Source record: 97181

I just picked up a ts-430, and would like to install a cw filter.
The manual isn't terribly well written, or translated, and isn't too
clear on the process. Does the IF unit have to be totally removed, or
just swung up? Is it a tough solder job?

Thanks.

Tom

Message-ID: <37F8FCE1.8D11BD37@nac.net>
Source record: 97182

I have a Heath HW4P 440 Mhz handheld which I believe was manufactured by

Standard. The battery slides on the back as some Standard HT in the time
period.
The radio also looks like the new 6 meter and 220 HT's being sold by
ADI/Pryme.
The Heath part number for the battery is model HWA 410 rated at 7.2 v
and 700 mAh.
Any one have any ideas?

From: John Habbinga <kc5zrq@earthlink.net>
Message-ID: <7tbat6$h8s$1@ash.prod.itd.earthlink.net>
Source record: 97188

Over the weekend at the South Plains fair here in Lubbock, TX I noticed a problem developing with my radio. The second VFO was making feedback noise when the volume was turned up. It also would cut out when held at an angle. I took the radio to the ham shop here in Lubbock where I bought it. Rick the owner of Rad-Comm told me that the radio had a VCO problem and needed to be sent back to Alinco for repairs. The radio is still under warranty so getting it repaired wasn't going to be a problem. I explained that I had this radio up for auction on Amazon.com and that I am planning to buy a Yaesu VX-5R with the proceeds of the sale. Rick, being the nice guy that he is, replaced the radio for me. So now the radio you are bidding on is brand new. I hope this is acceptable. :-)

BRAND NEW Alinco DJ-G5TH for auction at:
http://s1.amazon.com/exec/varzea/ts/exchange-glance/Y01X4796748X9055204

Thanks,
John Habbinga (KC5ZRQ)

If you want to do business with a great guy contact Rick at Rad-Comm. Rad-Comm's website is at: http://www.rad-comm.com.

Dear Future Associate,

You Can Work At Home & Set Your Own Hours. Start earning Big Money in a short time

NO Newspaper Advertising!

Your job will be to stuff and mail envelopes for our company. You will receive $.25 for each and every envelope you stuff and mail out.

Just follow our simple instructions and you will be making money
as easy as
1 2 3

For example stuff and mail 200 envelopes and you will receive $50.00. Stuff and mail 1000 and you will receive $250.00. Stuff and mail 2000 and you will receive $500.00 and more

Never before has there been an easier way to make money from home!

Our Company's Home Mailing Program is designed for people with little or no experience and provides simple, step by step instructions.

There is no prior experience or special skills necessary on your part, Just stuffing envelopes.

We need the help of honest and reliable home workers like you. Because we are overloaded with work and have more than our staff can handle. We have now expanded our mailing program and are expecting to reach millions more with our offers throughout the US and Canada.

Our system of stuffing and mailing envelopes is very simple and easy to do!
You will not be required to buy envelopes or postage stamps.

We will gladly furnish all circulars at no cost to you. We assure you that as a participant in our program you will never have to mail anything objective or offensive.

There are no quotas to meet, and there no contracts to sign. You can work as much, or as little as you want. Payment for each envelope you send out is Guaranteed!

Here is what you will receive when you get your first Package. Inside you will find 100 envelopes, 100 labels and 100 sales letters ready to stuff and mail

As soon as you are done with stuffing and mailing these first letters, your payment will arrive shortly, thereafter. All you have to do is to order more free supplies and stuff and mail more envelopes to make more money.

Our sales literature which you will be stuffing and mailing will contain
information outlining our highly informative manuals that we are advertising nationwide. As a free gift you will receive a special manual valued at $24.95, absolutely free, just for joining our Home Mailers Program.

Plus you will get your own special code number, so that we will know how much you are to get paid. And to make re-ordering of more envelopes, that our company supplies very simple for you.

We are giving you this free bonus because we want you to be confident in our company and to ensure that we will be doing business with you for a long time.

Benefits Of This Job:

1. You do not have to quit your present job, to earn more money at home
2. You can make between $2,500 to $4,500 a month depending on the amount of time you are willing to spend stuffing and mailing envelopes
3. This is a great opportunity for the students, mothers, disabled persons or those who are home bodies.

To secure your position and to show us that you are serious about earning extra income at home we require a one-time registration fee of $35.00.
This fee covers the cost of your initial start up package, which includes 100 envelopes, 100 labels and 100 sales letters and a manual, your registration fee will be refunded back to you shortly thereafter.

Money Back Guarantee!

We guarantee that as soon as you stuff and mail your first 300 envelopes You will be paid $75.00 and your registration fee will be refunded.

Many of you wonder why it is necessary to pay a deposit to get a job. It is because we are looking for people that seriously want to work from home.

* If 3.000 people told us they wanted to start working from home and we sent out 3.000 packages free to every one. And then half of the people decided not to work, this would be a potential loss

of more than $60,000 in supply's and shipping that we have sent out to people that don't want to work

We have instituted this policy to make sure that you really want to work and at least finish your first package.

To Get Started Today Please Enclose Your Registration Fee of $35 Check,Cash Or Money Order and fill out the application below and mail to:

MOHW Co
11054 Ventura Blvd PMB #126
Studio City, CA 91604
Name_____

Address_____

City_____ State_____

Zip Code_____

Telephone Number(s)_____

E-mail Address_____

For all orders, please allow seven (7) days for delivery and up to 10 days. Cash and Money Orders will result in faster shipping of your package.

251. sale or TRADE adi ht's

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-05 00:00:00 UTC
From: Tom <yaesutom@home.com>
Message-ID: <O4vK3.5035$Pf4.25934@news.rdc2.mi.home.com>
Source record: 96999

I have 2 ht's, a ADI at-200 (vhf) and at-400 (uhf). I would like to trade the at-400 for...a 2 meter ht of some kind, another at-200 would be fine, or something similar. Or sell the at-400 if no one wants to trade...There is just no 440 activity in the area anyway, i'd rather have another 2 meter ht. Email yaesutom@home.com

252. Need Ten-Tec Info !!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-05 00:00:00 UTC

257. Re: Swan 270b - Power Cord Diag.?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-05 00:00:00 UTC
From: Bill Christiansen <ici1178@icomnet.com>
Message-ID: <37FAB9D8.577B2EED@icomnet.com>
Source record: 97005

Well some of the pins are jumpered over to switch from 110 to 220 VAC. The rig will not run on 12vdc. I no longer have a diagram for the 270b, but I do believe the 350D that I have here uses the same power cord.
Here is the diagram for it.

```
1 2 3
| | |
4 5 6
| | |
7 8 9
_ | _

10 11 12
_ | _
```

110 VAC
White wire to pin 10
Green or ground to pin 4 and 5
Black wire to pin 3
pins 5&6 Jumpered.

Hope this helps, by the way my Swan 350 D is for sale for $200, it is in perfect shape. Has the digital display and new finals, plus and extra new final.
Bill

With regards to the aftermarket clip, the guy who sells them appears to be a total jerk and I am sure the clips are not as good as described. I had posted a cheap way to may a Bravo belt clip work on the VX1R, and got an ear full from the guy who keeps posting aftermarket clips here in some weird large type format. Your opinions are important and keep people informed. Keep them coming.

Source record: 97066

Hello Jim. I am a control operator and one of 3 technicians on a system of Hamtronics repeaters. They are crystal controlled, a 2 meter on 147.69/147.09, 447.175/442.175, and 52.93/53.93. All are PLed on the receivers using 107.2 Hz. The controllers are by NHRC. The 440 and the six meter have been up for the past 8 months. The 2 meter has been up over 2 and a half years. There is a ten meter machine in the works. Of the four, it will not be a Hamtronics. There is also an Air Force MARS repeater that has been up almost three years. It just came down for maintanance due to a power supply failure. This is the first trouble of "major significance." These machines have been compared to Motorola for sound and quality. 73s, Marilyn Hartley W4ME

273. PRO-96 Elements

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-05 00:00:00 UTC
From: bshort@speedchoice.com
Message-ID: <MPG.12637f9be51087839897ce@news.speedchoice.com>
Source record: 97067

PRO-96 Elements

Below was previously posted on this newsgroup as
a description of function of elements for the PRO-96.

K7JAY in speaking with Mosley on the telephone was
told that the #4 driven is 12/17/20 and the #5 driven
is 10/15/20/40 (i.e. there are 2 20m drivens ???).

Who is correct?

In fact, 20m SWR is tuned by adjusting driven #4 below?

```
| | | | 1. Reflector - 40/20/17/12
| | | | | | | | 2. Reflector - 15
| | | | | | | | | 3. Reflector - 10
| | | | | | | | | 4. Driven - 12/20
+-+-+--+-+---+---+---+---+ 5. Driven - 40/17/15/10
| | | | | | | | | 6. Director - 10/12/17
| | | | | | | | | 7. Director - 10/15/20
| | | | | | | | | 8. Director - 10/12/17
| | | | 9. Director - 10/15/20/40
```

I have never seen it documented that there are actually
the 2 20m drivens, but I beleive it is the case. Can anybody
settle this local argument?

Source record: 97076

Thank you for the link. I'm also a firefighter/paramedic and this mod allows me to use my Yaesu for my public safety work and now I don't have to buy "2" radios for my new truck (Ham & Commercial). I had a hard time finding this mod. I just bought a FT-2600 to go along with my FT-2400 (which is modified & will now be a base), which outperforms our commercial rigs we have on board our emergency vehicles.

Again, thanks. (I'll also add the link [www.mods.dk] to my ham links page)

286. VX-1R

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-05 00:00:00 UTC
From: Robert Lyons <boblyons@umich.edu>
Message-ID: <37FA222F.36AA3231@umich.edu>
Source record: 97080

I've got a VX-1R with a blown RF amp in the 2M section (all other bands seem to receive OK, transmit is fine on 2M and 440). Most likely culprit is a transistor identified as Q1021 (2SC5008) in the circuit diagram (bless you, Yaesu, for giving us a diagram!). Now my problem is finding a replacement. I've no clue how to get SMD components. Ideas? (Yaesu wanted $220 to fix this unit!).

Alternatively, I'd love to hear of someone who owns a VX-1R that's got some other defect - and who's willing to sell their unit to me. Anyone?

Thanks for any suggestions you may have.

I have a sm-220 kenwood station moneter in verry good condition. I would like to trade it for a ts-820 or a 520 or something similar, something with tube finals. I have a couple people interested but I haven't heard from any of them in a week so I don't know who is still interested or what. I have had a lot of calls and emails where no one has responded so first come first serve. I will sell it for $250+shipping. On a trade I will add cash if you want. I will considder trade for a yazzu 101 series radio too if in good condition. If you can help or want this sm-220, email direct to racerjm3@aol.com. If 1 of the people interested in this reads this email me to let me know what is up. thanks

Hello Gervais. Hamtronics of Moul, NY, has their own web site. I think it is www.hamtronics.com. You might want to try that. Hamtronics equipment can be used a a simple single channel radio or using a controller and duplexer makes a great repeater. This is just a small part of their overall market line. They have repeaters that are much lower in price than their competition. They have high quality and great factory support. 73s, Marilyn Hartley W4ME.

> Has anyone a direct experience on the effective performances of JPS
> ANC-4 in this hostile environment ?

I found the ANC-4 effective, but it does need a good noise antenna,
the internal whip was a total waste of time in my situation.

You might check out the MFJ unit also as they believe that their
design is easier to adjust - they claim their noise gain control
alters the phase shift far less than the JPS. I've never tried the
MFJ model or spoken to anyone who has.

>

Your radio was manufactured in March, 1999, not May. To find the month of manufacture from Yaesu's serial numbering scheme, you must subtract 2 from the position in the alphabet of the letter contained in the serial number.

To find your Yaesu radio's month of manufacture -- "E" is the 5th letter of the alphabet. 5 - 2 = 3. Therefore, it was made in the 3rd month which is March. This formula has been well documented on the various list servers dealing with Yaesu gear.

FYI, in March of this year I purchased a radio with a 9Dxxxxxx S/N. Using direct conversion of the letter to the month (not subtracting 2), would mean that I obtained the radio a month before it was manufactured!

306. IC-706MKII putting out harmonics on 15m/17m

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-06 00:00:00 UTC
From: ke6d@arrl.net
Message-ID: <7tgn01$kt6$1@nnrp1.deja.com>
Source record: 96950

I recently acquired a used ICOM 706 Mk2 which seems
to work ok all the bands except on 15m and 17m. Here is
the symptom:

I found out that the transmitter on 15m and 17m bands seems to
generate spurious signal when the CW key is up (release)
I found this out while tuning up my antenna using
the 706 into an MFJ-989C. The transmitter seems to work ok
into a dummy load on these 2 bands (problem only occurs in
these two bands, the rest are ok). When I switched to a
Butternut HF9V vertical, or a dipole, I noted that the transmitter
is working during key down (cw), then upon releasing the key
(key up), the SWR briefly shot up really high, that causes the
ALC to kicked in and reduced the power to pretty much nothing
(but this is only during key up so in effect, the SWR just
jumps up very high when the key is released) Sometimes the ALC
circuit took time to recover, as a result, a couple of dahs or
dits went by without RF power!

Thinking that the rig has problem with all the bands, I went
through and checked 80m-10m bands, but only 15m and 17m have
this problem.

I came to the conclusion that something is failing in the band
pass filter section for 15m/17m that on key up, the spurious
harmonics are generated which cause the radio's ALC circuit to
shut down TX momentarily.

Does any have any idea what was wrong with it?

73 es TIA.

312. ICOM IC706MKIIG Problems!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-06 00:00:00 UTC
From: Paul Aidukas <kt4di@iu.net>
Message-ID: <37FBF2E4.886BD30D@iu.net>
Source record: 96956

A couple weeks ago I purchased an ICOM 706MKIIG. This is the HF/6M/2M/70CM version with 50W out on 2M. Twelve days after the purchase the 2M band stopped transmitting. I brought the radio back to AES and they found that a strip line PC board trace in the RF unit was vaporized (gone). This affected only 2M band. UHF, 6M and all HF bands still output full power. AES replaced the radio with a new one. I checked my SWR of the antenna I was using, a Diamond X510 dual band, the reading showed better than 1.1:1 SWR. The radio blew when operating 2M FM at high power (50w) after transmitting only a short time (<10 mins). After receiving the second replacement radio, a few days later the same thing happened, 2M stopped transmitting. I rechecked my SWR and the antenna still has a near perfect SWR. I further checked my power supply, it showed 13.68 volts, with no AC ripple that my digital volt meter can read.

My question is this: Has anybody else experienced this same problem with 2M FM blowing out with the new IC706MKIIG??

Check over your SSB real well. Mine had a problem with distorted,
garbled, SSB output (now in shop for repairs).

Also, check the microphone connector. After a few days of use, I
noticed that the connector was very loose.

Other than that, the radio is excellent.

ICOM no longer has the LCD display available to replace the display on the 02AT....

Does anyone know of some other source for this LCD???

317. Swan 270b - Power Cord Diag.?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-06 00:00:00 UTC
From: jcowgar@bhsys.com
Message-ID: <7te56u$q9c$1@nnrp1.deja.com>
Source record: 97006

I have a swan 270b and I have misplaced the power cord... CAn anyone tell me the pinouts of their fancy connector??? The pins are rectangular, and in various ways... It looks like (from the back)...

```
| | |
| | |
- | -
- | -
```

Through these pins you can connect 12v or 120AC. It took the top off to try and located which pins would be the 120ac, and it appears as though 4 of the pins go into a transformer. 2 of which are solid black wires, and the others are a yellow/black and an orange.

If anyone can help me get my rig back on line, I would greatly appriciate it...

Thank you!

There is an adjustment for the level of the Subaudible tone . In my Alinco DR-570T I also had a few critical comments about the Tone noise. I also found that certain tones
such as the lower ones were more objectionable. However, they were livable.
I found a adjustment to turn down the CTCSS tone and if you turn it down to much it will not open the Repeaters Squelch that need the tone. So may want to back down the gain of the tones but don't go tofar as you will not be able to access the repeaters that require the tones.

Hi Guys;
Is anyone parting out an SX-100 Halicrafters receiver or just selling some knobs?
Here is wat I need for mine.
Both Tuning knobs, Bandspread and main tuning. Must be in non-chipped condition. Mine are both "chipped" Badly.
Also, i need the CW pitch knob and the small shaft just behind it that only allows 180 degrees rotation in each direction. Mine is completely missing. All I have it the small brass diameter shaft that about even with the front panel.
Any help will be greatly appeachieted, please e-mail with cost.

326. ++++FT or Sale:Motorola VHF Suitcase repeater++++

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-06 00:00:00 UTC
From: hq54@aol.com
Message-ID: <19991005231105.16172.00001148@ngol02.aol.com>
Source record: 97015

Hi All,

I am looking to trade what I believe to be a rare find, a Motorola suitcase repeater, model number p43sxs. The unit is capable of at least 20 watts, and maybe 40. Unit is also DVP capable and equipped. The unit is self contained in a suitcase, hence the name, that has a power supply, a mobile duplexer that lists it has better then 80 db of isolation and 1 db insertion loss, the PA, transmitter and receiver and interconnect boards. The unit is based on the MX portable, therefore, the modules from the MX radios such as the rf pa and the pl modules are interchangable, although it does not require external radios as some suitcase repeaters do, this unit is, as I said, self contained.

However, at this time the unit does not work. I am unsure what the problem is, and am almost positive that I can't fix it because after opening the unit and looking around, I couldn't figure out what was wrong. The unit has worked in the past in my presence, and I can't think what might have happened, maybe a loose wire or a failed module.

So here is the deal finally, I would like to trade this unit, with some VHF MX portables and parts, and an original service manual so the technically inclined can repair the unit, or give it to thier local M shop and see what they can do. I just don't have the funds right now. I would like to trade the unit for 2 VHF Syntor X's. Wattage isn't important, but I do need 2, and prefer with accessories, but I definately need the control cable. I would also consider a 16 pin GM300 and RICK, or of course, CASH. Please make me an offer. I also have 2 VHF Mitreks that I might be able to throw in to sweaten the deal, is the price is right. Please E-Mail me.

Thanx
Mike

news:37FAB9D8.577B2EED@icomnet.com...
Well some of the pins are jumpered over to switch from 110 to 220 VAC. The rig will not run on 12vdc. I no longer have a diagram for the 270b, but I do believe the 350D that I have here uses the same power cord.
Here is the diagram for it.
1 2 3
| | |
4 5 6
| | |
7 8 9
_ | _

10 11 12
_ | _

110 VAC
White wire to pin 10
Green or ground to pin 4 and 5
Black wire to pin 3
pins 5&6 Jumpered.

Hope this helps, by the way my Swan 350 D is for sale for $200, it is in perfect shape. Has the digital display and new finals, plus and extra new final.

Jim,
I wonder if you would consider an older one than that. I use a Zenith
286 supersport that I picked up on ebay for $35 bucks about a year ago
(and they go for the same now). I run several DOS Packet and Logging
programs and it runs just fine.

you might consider it

I've seen a variety of commercial filters and homebrew designs, but
never any designed to pass more than 100W.

In the multi-multi stations I've operated from the bandpass filters are
installed between the transceivers and the amplifiers. If your
amplifiers are reasonably linear, that should work OK.

Mike... Could you possibly email me the scanned schematic in it's entirty? I had an old beat up copy of the schematic, but during a recent move I have been unable to located it. I have ripped my entire house apart, and got a nice mess to clean up when I get home from work today :-)

If you could, I would appriciate it!

Source record: 96892

First of all is it your fence? If so you might just turn it off when you operate. If it is not talk to the owner and offer to help him or her locate the problem. Modern fence charges usually do not produce the noise and the likely problem is a poor connection in the fence wire or something that is providing a temporary short. If it is the charger you might offer to buy the farmer a new one. They really don't cost all that much these days.

Check any gates and make sure that the connections across them are making solid contact. They are the most likely cause of noise.

Does the noise happen all the time or are there conditions where it does not occur? Walk the fence line and check that all of the insulators are in good shape and none are cracked or broken. Also look for grass, weeds, or other objects that may be in contact with the fence wire.

Usually most farmers would welcome the help because the noise is probably causing them havoc on their AM radio.

If all else fails get a radio with a good DSP and you can filter out most of the noise.

From: Paul Richards <p.richards@ukonline.co.uk>
Message-ID: <=+P8N9Kzh0ljndiociwqfvINHafN@4ax.com>
Source record: 96896

I have been unable to persuade my ft736 to scan usb as well as fm
memory channels.

According to the manual, this should simply require selecting MR mode,
pressing the scan button above the main tuning dial until scan begins,
and then touching the band button to enable memories from all bands.

On my set, only the fm channels appear to be scanned.

Additionally, the manual says that the appearance of an arrow under MR
means the channel is to be skipped, but in practice it appears to work
the other way round?

Can anyone clarify?

Regards
Paul

Yes.

I go from vfo to MR, select a usb memory, adjust squelch, and press
and hold up until the frequency changes. The radio stops on an fm
channel, but the receiver doesn't unsquelch. If I then press band, the
receiver scans fm channels on all bands...

373. FS or Trade: Surge Motorola TalkAbout Winning Labels

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-07 00:00:00 UTC
From: Jeff Johns <jeffj@scott.net>
Message-ID: <320972744002977NEWS2LX@news.idea-works.net>
Source record: 96912

The Coca-Cola Company has recently sponsored a contest on their Surge brand of soft-drinks in which it is possible to win a pair of Motorola TalkAbout FRS radios, by correctly scratching off certain portions of the bottle labels and matching the prizes underneath the 'scratch off' area.

The rules allow for only one prize of this dollar value to be sent to a household, therefore I can not receive another prize. I have four additional winning labels, which tally up to 8 individual radios, each label is worth a pair of radios.

I would like to either sell these additional labels I have or trade them for something. I would love to trade two of the labels for the following items from Ramsey Electronics (http://www.ramseyelectronics.com):

1 each ME-2000 @ $119.45
1 each PB-1 @ $14.95

I will also entertain offers of ham radio equipment or just good old-fashioned cash <grin>. The radios retail for around $80 each ($160/pair). They sell on eBay for around $50-$60 each ($100-$120/pair).

The radios are Motorola TalkAbouts that are black with the Surge logo on them. To redeem the labels you must mail them to the Coca-Cola redemption center via registrered mail and they, in turn, will ship the radios to you. I have sold a couple of labels on one or two of the internet auction sites, but thought some folks in the ham community might be able to enjoy them (I'm a ham, but no one else in my family is so they are quite handy).

If anyone is interested, drop me an email and make me an offer and we'll work out the details.

Check out the following URL. I have 2 radios up on Ebay--a Kenwood 430
with all optional filters and the FM unit, and a Kenwood 450SAT with
the internal tuner, and all factory installed filters. They both have
minor problems--all described in the ads.

Sunair GSL-1900A 1KW PEP or Average power RF Amplifiers covers 1.6 to 30MHz. Uses a single 4CX1500B and require a nominal 40 watts of drive. Automatically tuned in a few seconds.

The power supply uses 115/230V/1PH/60Hz. These consist of LPA1900A RF Amplifier and PS-1900A Power supply. Total net weight 190 Lb.

Removed from military service in good condition UNTESTED with a set of plugs and a copy of the manual at $1,750.00 FOB Somis. Only a few of these very well built commercial/military grade units are left in stock.

There is a photo of this on our web site.

For Sale: Ranger RCI-7100, 16ch VHF Radio

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=176663075

16 channels
5/1 watt selectable output
148-172Mhz
Built-in Scanning with Priority Scan
CTCSS/DCS/PL capable
Good Battery & Antenna
Comes with AC Charger
Get complete specs at http://www.ranger-inc.com/4b-ra_lmr.html

This is an excellent VHF two-way radio, at a very reasonable price! It can compete with major Motorola, Maxon, Vertex, and other manufacturers! Radio is in excellent shape (9 out of 10 cosmetically) and is in working condition. I no longer have the programming equipment so I can't program this radio for you, but it can be programmed by a dealer, or the equipment can be purchased from Ranger very cheap. Radio sold As-Is. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

Hi Fellas;
This is the probably my last posting as i only have few of these left.
Please do not say you want one and not follow thru, last time there were a
few that did so!
I have for SALE:
A Bunch of 40 meter cw Qrpp transmitter circuit boards, all complete and just
require a 40 mtr xtal, power and antenna. They come with a schematic and are
new!
They are 3 transistor, 2-2n2222, 1-2n3053, have toroid output, require 12 vdc.
Maybe can be used as a driver? Experimental? Power out is Very low, My
wattmeter hardly moves.
Please do not ask technical questions as I am not technically oriented.
I have placed a .JPG picture of it on my site so if you have questions or
want to see it, heres the URL>>
http://member.aol.com/rlucch2098/qrpp.jpg
Some may vary slightly from this picture.
Price is $13.20 ea. ppd Priority mail.

394. IC-746 low power output?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-07 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <IIUK3.2173$nm.38664@dfiatx1-snr1.gtei.net>
Source record: 96975

Picked up my new Icom 746 today - mostly looks like a nice rig - but find that the BEST output available is about 80 watts - full key down CW - and that output is only on 40 meters and lower - it falls to about 60 watts on all higher bands except 2 meters, where about 80 watts is indicated (separate final circuit on 2 meters). These measurements are into well matched antennas, and with power meters that have proved quite adequate in measuring output from all other equipment tested, even though not of "laboratory" accuracy or quality - but hell, we're talking as much as *40 WATTS* below the claimed 100 watt power claimed by Icom.!

SO, will contact dealer tomorrow for options - meanwhile, is my case unusual, and has anyone successfully increased power output by way of internal adjustments on this rig?

Gary - KJ6Q

412. FS Yaesu FT 847

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-08 00:00:00 UTC
From: Roger <rogerm@anent.com>
Message-ID: <aokL3.7450$eM4.531568@typ11.nn.bcandid.com>
Source record: 96843

I have for sale the Yaesu FT847 (all mode HF, 6, 2, and 432) in a condition like new. The radio is 4 months old and has about 2 hours operating time. I have the factory box and all items that came with the radio and no options or accessories. I am a non smoker.
The price is $1410 and please send message if interested or for more information.

Roger

I have FS repro nameplates for the commercial Collins 51J-3 and
51J-4. These repros were made with permission from Rockwell, and
complete with screws. SN's start with 12,000.

$12 shipped.

Also have generic R-390A nameplates for your St. Julian's Creek
restorations, $9 shipped.

Greetings,

Just aquired a Drake L-4B that is exhibiting the following problems:

A: No output whatsoever in the CW/TUNE position (acts like a dummy load...even absorbs all exciter input).

B: Works OK in the SSB position however red indicator light doesn't come on (flickers lightly when you turn off amp with switch in SSB position.

Any suggestions would be greatly appreciated.

422. FS: Collins 180U-2 antenna tuner

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-08 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <%irL3.44$HI1.2268@dfw-service2.ext.raytheon.com>
Source record: 96853
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

For sale:

Collins 180U-2 antenna tuner, removed from KWT-6 HF station.
Original condition, as-removed from the KWT-6 (by me). This
is an L-type tuner with a very nice Johnson roller coil with
a smooth vernier, along with a combination of fixed and air
variable capacitors. Selectable high-Z and low-Z modes. The
input and output connectors are Type N, but they can easily
be changed to SO-239 without hacking or drilling. The unit
is in good shape with minor wear. Could use light cleaning.
Insides look to be in great shape. Cabinet is bare aluminum
(would look nice if painted with black wrinkle-finish paint).
Price is $65.00 plus shipping.

For those of you who are familiar with the KWT-6... this is
the ATU only (I'm keeping the Wattmeter / speaker unit).

73,
Dean / K5DH

423. Re: Icom 207H mod

Newsgroup: rec.radio.amateur.equipment

Has any one tried this mod. I was trying to find a more descriptive way to identify the diodes. I have a jpg file of the board if someone has performed this mod I would like to correspond with them and get a verification on the diodes 2&3 locations.

remove the 4 screws attaching the bottom cover and remove the cover. (I had to use a small screwdriver to pry on the cover. It's made to fit tight) with face toward you and belly up look to far right of board and close to you locate a row of SMT diodes 3 on top then a shift to right and a few more. The three are in a PERFECT row top to bottom! count from the top of the row 1 2 3. Remove the # 2 & 3 diodes. Now continue looking down from there and you will see a resistor sticking up in the air (W14). Clip the lead off of the resistor. Reassemble the radio and perform a CPU reset by holding the Set and S.MW buttons while turning the radio on...(page 69 of manual).
You now will have :
118-135 RX (stock)
136-174 TX & RX
320-399 RX (hmmm what's there? I've heard a local radio station DJ at a remote location talking to the station)
400-479 TX & RX
849-950 RX

424. Sell/Trade: Kenwood TS-140S

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-08 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <SBrL3.46$HI1.2268@dfw-service2.ext.raytheon.com>
Source record: 96855
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For Sale or Trade:

Kenwood TS-140S hf transceiver. Comes with original manual, inner and outer shipping cartons, hand mic, mobile mount, and DC power cable. Has been modified for general coverage transmit. Has some wear around the edges of the front bezel from previous owner's mobile use, but otherwise is in good shape.

I figure the value is about $400, judging from the recent sales that I've seen on the internet, so that will be my selling price (firm) or trade value.

I need a mobile HF rig, but it has to be something smaller than the TS-140S.

I'd like to trade straight across for a Ten-Tec Scout with some accessories, toward a Kenwood TS-50S or an Alinco DX-70T (I'll obviously have to add some cash on these!), or for a NICE Atlas 210X plus cash. What do you have? Let's deal!

73,
Dean / K5DH

If someone needs one or two Spanish operator manuals for the Yaesu VX-5R HT, I have two I would send to, free.

I know these manuals are provided with every HT sold, but I just didn't want to dump these two until I asked.

Source record: 96877

Re: Reverse polarity applied to FT-8000

To All Who Replied,

Good news. I was able to fix my FT-8000. A local ham here had the same problem a few years ago. He found a "micro fuse" etched on the circuit board close to where the reverse polarity diode is located. It is a really super small etching in the circuit board that is designed to burn when high current is forced through it. I did not see this originally but after talking with the local ham here, he described what to look for. The fix entailed soldering a small gauge magnet wire over the burnt out etching.

All is well now and the radio works good again!

To everyone, thanks for the help.

I have a brand new HTX-400 HT in the box. Bought it to hit the 440 repeaters in the region but they are too far away (30 miles) and the HTX-400 is only good for 500mw. Paid $199.00, will sell for $150 or trade for an older 440 HT, perhaps an HTX-404 in good condition.

Yaesu VX-1R 2m/440 Micro-Handheld Transceiver

This radio is in excellent condition, very little use. I am the
original owner
and I just never seemed to use this one so I am selling it so that
someone else
might enjoy it.

Specifications:

- World's Smallest Dual-band Handheld w/ Wide Receiver Coverage
- 500 mW Power Output (1 watt w/ External Power Adapter)
- Wide VHF/UHF Multi-band Receive
- 290 Memory Channels in 9 Groups
- 6 Character Alpha-Numeric Display
- Built-in CTCSS Encode/Decode
- Built-in DCS Encode/Decode
- Built-in CTCSS/DCS Tone Search Feature
- Smart Search Function - Dual Watch Feature
- One Touch ARTS (Automatic Range Transponding System) Feature
- Priority Channel Alarm Feature
- AM Air-Band Receive
- Size H81 x W47 x D25 mm
- Weight 125 g w/ Antenna and Lithium Ion Battery

Includes:

- Radio
- Lithium Ion Rechargable Battery
- Antenna
- AC Adaptor
- Box
- All Manuals

Extras:

- Soft Case
- Car DC Power Adaptor
- Standard Ear/Mic Adaptor
- SMA - BNC Adaptor

Hello,

I am inviting you to come visit http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Message-ID: <37FFE156.61B40777@jersey.net>
Source record: 96743
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I don't know who made this transmitter or when it was made but it's been reconditioned and is in nice condition. It consists of three rack mount units in a 19" cabinet. The top module is the VFO / Exciter / Amplifier which covers 10-80 meters and uses an 813 as a final amplifier. The second module is the modulator that utilizes a pairof 572B's. The last unit is the power supply which has been converted to solid state rectfiers. It was mostly used for 40 and 80 AM where it produces most of its power (about 300-450 watts) but it will work good on all of the other bands. Asking $900.00.
If you are interested , I also have an audio processor that was used with this transmitter. It's a Dorough DAP-610 3 band AGC / limiter with digital control. With a good mic and mic processor, the DAP-610 gives you that LOUD broadcast sound on AM. I'm asking $400.00 for the DAP-610.

Please respond via e-mail

From: Matt <matt371@jersey.net>
Newsgroups: rec.radio.swap

I have two 30L-1 amplifiers for sale. This model amplifier uses 4
811-A's to produce about 900 watts PEP on 10-80 meters. Both units are
in nice shape and in working order. About a 9 out of 10 in looks. One
unit has a small scratch on the top, otherwise they are in great shape.
I'm asking $300.00 each + shipping.

Matt

478. HTX-202 Er1/ lithium battery problem

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-09 00:00:00 UTC
From: Mark Lienert <mlienert@wzrd.com>
Message-ID: <38000C13.5C2B49E9@wzrd.com>
Source record: 96748

Has anyone had this problem. I have an HTX-404 and I keep getting the Er1 error message every few weeks DESPITE the fact that I have changed the internal lithium back-up battery about 3 months ago! Apparently, there must be an intermittent short somewhere inside, although I made sure the battery and wiring was well insulated.

Thanks,

Mark L. KG2DE Buffalo, NY

Thats too bad. I actually enjoyed reading the magazine complete with his ravings. The microwaves and beyond section was pretty good as were most of the construction articles. I don't subscribe but buy at the newstand so I guess I can share the blame.

MFJ's catalog. However, I made a mistake. The catalog lists the item number, price, and shipping code. It then describes the Yaesu compatible microphone, followed by what I thought was a repeat of the same item number and price.

However, I just realised that the second item number is talking about another microphone for a Motorola radio, not the same microphone (the item number is different by one letter).

Sorry for the mix up. I have no idea who makes the microphone.

From: jrp123@my-deja.com
Message-ID: <7tnr9vjgb1@nnrp1.deja.com>
Source record: 96812

Hi,

I'm in the process of learning Morse Code and have in
my possession a Heathkit HR-1680 ham bands receiver.
It covers 80 through 10 meters. What I need is an
antenna (preferably indoor) that I can hook up to
the receiver.

I soliciting the collective wisdom of this newsgroup
for recommendations. While I would prefer an indoor
antenna, I would consider outdoor antennas that are
not too large in size.

Thanks,
Jeff in Colorado

Put up the longest, highest single wire you can!
It can be VERY thin to be well hidden (Outside!)
Add a ground and your well on your way.

****** Please reply by e-mail *********
I have an autopatch that I am trying to get working. I had been using it for some time but noticed that, while all rigs could access the patch, very few rigs' DTMF were recpgnized by the phone company for dialing. I played with the audio levels and adjustements to no avail.

I have been using the audio from the speaker jack up to now, but I heard that I should be using the audio from the demod before it has been de-emphasized. OK, so I have that avail, but there is no squelch and there is a LOT of high freq. audio hash as well (besides the sig. level is too low as well).

I need an authoritative answer as to how to connect my autopatch to the rig so that it works. I am using an IC-28A (ICOM) xcvr and a Teleconnect 851 autopatch.

Thanks in advance.

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce KW PEP or average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $2,750.00 unpacked.

I have a few tested and Guaranteed 4CX3000A tubes at $750.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

There is a photo of this item on our web site

If you need more info please contact me.

525. *****FS: Kenwood TS-140S-MUST SEE!*****

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-09 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <fcQL3.2052$N64.56391@dfw-read.news.verio.net>
Source record: 96836

Hello. I have a Kenwood TS-140S for sale. A far as I know, I am the 2nd owner of the radio and have only put moderate usage on it. It's working condition is 100%, and cosmetically it's probably a 75% or 80%. No noticeable scratches of blemishes on the front panel and it has never been mobile or portable. Not sure how many of these were made, but the serial number is quite high. There are some scratches on the sides, top and bottom, but none are very major. In addition, I am also including all of the following with the radio:

-Kenwood Power Cord
-Samlex 23A Power Supply (With Box/Original Manual)
-Kenwood MC-40S Hand Mic (With Box/Original Manual)
-Kenwood YG-455 500 Hz CW Filter
-MARS/CAP Modification
-The Original Manual/Schematics (In Slightly Iffy Condition)

The radio has many features, too many to name they all. But here are the general specs for the radio:

-31 Memory Channels, RX from 50 KHz-35 MHz, FM Squelch, split frequency operation, AM/FM/CW/SSB (RTTY/PSK31/Packet with extra equipment), dual NB's, full QSK, selectable simi/full break in CW, scanning, speech processor, RF amp relay, RIT/IF Shift, selectable AGC, VOX/MOX, NB level control, fully selectable power output (not stepped), and 160m/10m including 12m/17m/30m.

This radio's specs say that it should do 100w PEP on all bands. However, I find that for some reason this radio will do much more then it's stated 100w. As I remember, it will do something like 125w on 10m, 150w on 12m/17m, 175w on 20m, 200+w on 40m, and around 175+w on 80m. I have never used the rig on 160m or 30m so I can't verify it's performance there.

And it will do these high powers on all modes and with your audio sounding absolutely perfect on SSB, and your CW sounding perfectly toned. Never used it on AM/FM/RTTY/PSK31/Packet so can't verify anything there either. This radio puts out a great signal on all bands and will drive virtually any amp extremely well. I have operated this radio at these high powers since I have owned it and never had a problem with it. People are always telling me how great the audio is and how well the CW sounds.

It weights 13.4 pounds and it's dimensions are: 281 width x 107 height x 305 length MM (11-1/16 width x 4-7/32 height x 12 length inches).

Now, the bad news. Operating at these higher power levels does tend to draw a fair amount of DC current. My 23A (25A surge) Samlex P/S that I'm including will handle this rig ok, but a 25A would do even better. I also

find that occasionally on SSB the mic gain control will get ?stuck? causing your power to drop way down. But all you have to do is wiggle the mic gain control a little and it solves it right up and brings the rig back to full power.

I've also found that this radio is 5hz off frequency. So if the display reads ?28.452.05?, that really means it?s on 28.452. You learn pretty easily how this works and it wasn?t much of a problem for me to cope with it. But if you find it troubling, you could buy a $30 cable that Kenwood sells and it will fix it right up.

My price is $950 shipped. That includes, the radio and all of the accessories, professionally packaged, fully insured, and shipped to you UPS Ground. Or I will sell at $875 if you pickup in the Washington D.C. area. I will also trade for an Ameritron ATR-15 tuner (or 2 if you happen to have 2) plus cash, or for a good condition Dentron ClippertonL plus cash (or 2 of those if you have 2 of them). Thanks for reading, and please let me know if you have any questions.

526. FS: Vectronics HFT-1500 W/Extra Roller Inductor

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-09 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <ceQL3.2055$N64.56391@dfw-read.news.verio.net>
Source record: 96837

Hello. I have a Vectronics HFT-1500 HF antenna tuner for sale. I am the 2nd owner of the tuner and it is in excellent condition. Cosmetically it's around a 90% and it works 100%. The tuner will handle 2000w PEP SSB, and 1000w on AM/FM/RTTY/SSTV/PSK31/Packet on all bands except 160m where you are limited to 1000w PEP.

It will tune CONTINUOUSLY from 1.8-30 MHz and includes a built in balun and a 6 position antenna switch. Very large cross-needle, lighted meter and 3kw/300w settings. It also has a built in digital bar graph with selectable settings for an accurate PEP SSB power reading. I will also include the DC power cord and a NEW replacement roller inductor NEW IN THE BOX.

This is an excellent tuner and I've never had a problem with it. It will tune virtually any antenna (including verticals, beams, dipoles, G5RV's, beverages, slopers, random wires, and long wires) and it has never been used above 1kw on any band. The roller inductor also has a number indicator that is actually ACCURATE (allowing you to come back to previously know inductor settings faster). New this would cost you around $575 from Vectronics (including the new roller inductor).

My price is $325 shipped. That includes the tuner, professionally packaged, and full insurance, shipped to you UPS Ground. I will also trade it for a good condition Ameritron ATR-15. Thanks for reading, and please let me know if you have any questions. For a picture and specifications try: http://www.vectronics.com/tuners/hft1500.html

Source record: 96839

I have a 93 GC, but the same ideas could apply. Not wanting to put holes in my then new Jeep, I installed everything with the super strong velcro like RS sells. I have a Kenwood TM-732 installed now, but I will soon replace it with an Icom 706 IIIg in a similar manner. Both have remote heads. Originally I had a Kenwood TM-741 mounted there, so I know there will be room for the larger IC-706 head.

I installed the main body of the transceiver in the right rear near the tailgate. I use a 2M/440 Larsen glass-mount on the right rear window. Getting the power back there from the battery required taking out the passenger seat and the door frame moldings. The hardest part was snaking the power line through the firewall on the passenger side where I found a rubber grommet.

The remote head is mounted ahead of the shift lever. An Icom SP-10 speaker is mounted in the front of the console facing forward. The microphone jack box is mounted on the right side of the console. Again, this is all done with the super velcro.

When I replace the TM-732 with the Icom 706 I will use a screwdriver antenna with a trailer hitch mount. The coax will go out the access door my 93 has to get to the emergency gas filler door release. The 99 may not have that door, but there should be some place to get outside from the rear area without drilling holes.

The only problem I have ever had with this installation is that once in a while someone working on the car will knock the speaker out of place. No big deal to stick it back on. It has served me well for seven years.

Hope you can use some of these ideas.

I have two 30L-1 amplifiers for sale. This model amplifier uses eight 811-A's to produce about 900 watts PEP on 10-80 meters. Both units are in nice shape and in working order. About a 9 out of 10 in looks. One unit has a small scratch on the top, otherwise they are in great shape. I'm asking $300.00 each + shipping.

Hi

I am searching for a 50 to 800 Mhz low noise preamplifier with a noise

figure smaller than 3db and with a gain betwen 15 and 25 dB, any

recommendation ? It can be build around a MMIC, or it can be multi

parts solution. Do you have a schematic

for a very good preamplifier, or do you know a commercial

preamplifier, let me know ?

Thanks a lot for your collaboration.

Maybe a bad cw/ssb switch

And for the red lite its burnt out...it is a neon bulb with a resistor
inside that unit.

I have the orignal lites for that amp.

Good luck

534. VX1R Charger Circuit??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-09 00:00:00 UTC
From: Bernie Skoch <75376.12@CompuServe.COM>
Message-ID: <7tm5g2$6j7$1@ssauraaa-i-1.production.compuserve.com>
Source record: 96883

I have a Yaesu VX1R HT. Love it. I bought with it a spare
battery. The only apparent way to charge the battery is with the
battery in the rig. I sure would like to build a holder into
which I could place the spare battery and plug in the wall-wart
charger so I could charge one battery while using the other.
I've studied the schematic, but it's so teeny I haven't been able
to follow the traces, much less figure out what I'd need to do to
replicate whatever is in the radio that is used in the charger
circuit. Has anyone played with this notion? I'm half tempted
to hook up the charger straight to the battery, but with my luck
I'd be omitting a critical regulator or current limiter.

Thanks for any thoughts.

73,
Bernie K5XS

I don't have one of those rigs, but I know that some radios,
particularly portables have a "transponder" type system in them so that
the stronger the incoming signal, the power output is automatically
lowered to conserve battery power.

FT-890AT with built-in antenna tuner shipped in original carton with 12VDC power cable, hand microphone, and original manual. $795. Pay by money order and I will pay shipping in continental US. Pictures and more information at my website. No problems with this one ever. Full output. Modified for all frequency transmit. 9.5 of 10 cosmetically, and 10 of 10 electronically. Operator a non-smoker.

100 watts output in CW, SSB, and FM modes. 25 watts carrier output in AM mode. Built-in ATU-2 antenna tuner. General coverage from 100 kHz to 30 MHz in 10-Hz steps. QSK keying for CW. Two independent A/B VFOs for each band (20 total) containing frequency, mode, clarifier offset, and repeater shifts.

Other features: Noise blanker, IF shift, notch filter, squelch, 4-function multimeter (SWR, power, mic gain, & S meter), adjustable passband-shifting RF speech processor, AGC, VOX, iambic memory keyer, frequency lock, RF preamplifier, RF attenuator, selectable tuning rate.

> and CW use. I've no present call for AM/FM/Digital.

I'm not sure what your choices are (that radio is out of my price range!) but...

I would go with something in the 400-500Hz range for CW. If you have the option to put one in each IF (I think you do) I would go for it, the improvement in skirt selectivity is worthwhile in contests.

Don't do enough serious SSB to know. If I won 2nd place in the lottery, I'd put in something like 1.8KHz for serious contest/DX operation, and 4-6KHz for occasional broadcast listening, both in the first IF.

Tom:
It should be at different levels due to the restrictive circuits that
are used to produce the dual watch via the 440 side. That radio also does TX
same band both sides and again the 2m band on TX on the 440 side will be
reduced. All in all you will not get the same performance on RX over there
so in turn your meter is giving you the correct reading. So...don't change
it, you will only be fooling yourself. Great Radio...Enjoy!

558. Yaesu NC-50 OK to Charge NiMH Batts?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-10 00:00:00 UTC
From: Dick Flanagan <dick@libelle.com>
Message-ID: <7trmkn$ctt@news2.newsguy.com>
Source record: 96707

Is the Yaesu NC-50 quick-charger appropriate to use for charging NiMH batteries? There are a lot of NiMH FNB-40 series batteries being sold and most people are charging them in the same charger as the Nicad versions. Is the NC-50 up to this or should a charger especially designed for NiMH batteries be used?

Thanks for any and all insight.

(welcome to ham radio!)

The easiest thing is to just hook up as much wire as possible. Get it as high in the air as possible. (attic? Hanging under the eaves?) You should be able to find plenty of signals.

PB18 7.2v 1100Mah Battery used condition
PB-14 12v 800Mah Battery used condition

W & W Slow Desk Charger

BC-15A Desk/Mobile rapid Charger

Filtered Cigar Lighter Cord Battery Eliminator

Soft Case to protect radio

SMC-33 Remote Control Speaker Mic

HMC-2 Headset with VOX/PTT

BT-8 AA Alkaline Emergency Battery Pack

TH-78A Instruction Manual

The TH-78A offers True full Duplex crossband operations, and the ability to receive two frequencies on the same or different bands simultaneously. The TH78A includes a DTMF keypad and a 6 character Alpha-numeric display allowing the operator to use both group names and actual frequencies. There is a dual band encoder allowing independent operation of VHF and UHF Bands with separate speaker jacks for each Band. This radio has had the paint polished off the heat sink on the rear but, heck that has changed operation and it kinda looks cool. The front of the radio is in good shape and you can read all the lettering fine.
I am a smoker but, I have never caught the radio on fire. Operation of the radio is up to spec. but at this price there is no warrantee. I ain't no store! Price is $300 bucks plus shipping or I need a dual band mobile of equal value. Or if you have one you think is worth more ...I got more trade'n stuff...

Any questions?

566. FS: SGC SG-2020 + Standard C468A + More

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-10 00:00:00 UTC
From: WA9FDZ <starman@mtco.com>
Message-ID: <38009483.23EB@mtco.com>
Source record: 96757

Hello,

I was in the process of building an emergency amateur radio station that could be powerful enough and portable at he same time. I have since abandoned this endeavor and decided to sell it all. The SG-2020 has never been on the air, let alone out of the box, except to make sure it worked. I also purchased the extended 3 year warranty for it. I have had it almost a year. The Standard Radio C468A UHF Hand-Held is new and never been used. All of the antenna wire and associated stuff is new and never been "in the air"

SGC SG-2020 Complete Station For Backpacking or Emergency Radio Station SG-2020 Transceiver, CW-SSB, 20+ Watts, general coverage receiver, built military tuff, includes mic, built-in keyer, and remainder of 3 year extended warranty (Still in original box - original cost $675.00 plus extended warranty $139.00 - see at SCG website http://www.sgcworld.com/

MFJ-971 portable antenna tuner for coax and balanced antennas (original cost $110.00).

Solarex MSX 10L - 10 watt Solar panel (small panel for backpack - original cost $129.00).

10 Yuasa NP2-12 sealed lead-acid batteries (value of $25.00). 100ft of Nemal RG8X coax (UV protected silver sheath - new, never used - value $35.00).

100ft LF4510 450 ohm ladder line (new, never used - value of $30.00).

100ft coated Flex Weave #14 antenna wire (made into a 100 foot dipole - value of $25.00)

Ladder-Loc center insulator (incorporated into the dipole - value of $15.00).

Bencher BY-1 Iambic Paddle (value of $79.00 when new).

Padded soft-cases for everything except antenna and BY-1 (value of $30.00).
Standard Radio Corp C468A 450MHz FM Handy Transceiver with softcase (this is a "New-Old-Stock" hand-held UHF transceiver that has never been used and still in original box - list price $480.00)

EVERYTHING is NEW and still in original boxes with the exception of batteries and Bencher BY-1 (They are in excellent shape).

Coax and 100ft dipole antenna have never been deployed (up in the air or even rolled out on the ground). Everything you need to be prepared for

Y2K or an emergency. ALL FOR $999.00 (POSTAL MONEY ORDER OR CASHIERS CHECK) I will ship to lower 48.

Thanks,

Steve Starman WA9FDZ

575. FS: 10m-40m, 7 Band, Trap Dipole-$40

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-10 00:00:00 UTC
From: Tony Heatwole <heatwole@shell.clark.net>
Message-ID: <7q2M3.2858$N64.62828@dfw-read.news.verio.net>
Source record: 96766

Hello. I have a 10m-40m Trap dipole for sale. It includes the balun to connect a coax right into it and the original manual. It will handle 600w PEP on all bands and will probably load on any frequency between 7-30 MHz if you have a good antenna tuner. It's overall length is 55ft and can be used on 10m, 12m, 15m, 20m, 30m, and 40m. Can be mounted as a sloper, dipole, inverted V, or beverage antenna.

It's certainly not new out of the box, so cosmetically it around 70%, but the working condx is 100% and I've never had any problems with it. Never been used above 150w and I'm the original owner (bought new around 2 years ago). The balun and traps are in excellent condition will little to no wear.

Reason for selling: just moved to a new QTH and don't have the space to put one up. I will ship it to you for $40 UPS Ground or USPS Priority Mail, your choice. Let me know if your interested. Thanks for reading.

Source record: 96782

You might try a solution of ammonia and water or even straight ammonia. That has always worked extremely well for me in cleaning up old rigs that were owned by smokers. In the case of a coiled cord, you might try soaking the cord a section at a time in a bowl of ammonia (not the connector of course!). You will be amazed how much "yellow gunk" will come off.

Hope this helps.

I have a Motorola converta com for the MT1000 radios. Has LED display, touch tone mic, and 12 watt powered speaker. also have all paper work for the unit. It is in excellent condition and works great used very rarely. I bought the unit brand new and installed it in my personal vehicle. Unit listed for over $500 new I will offer for sale at $300 and buyer pays shipping.

I have the same problem with with my 706MKII. Icom says this is
normal, and there is no fix. Most repeaters should filter this out.
I was told that it is just barely audible, and not a problem in my
case.

FCC to step up 10 meter enforcement

The FCC's Legal Adviser for Enforcement Riley Hollingsworth says hams can expect more rigorous enforcement on 10 meter issues next year. Hollingsworth told visitors to the Shelby Hamfest in North Carolina that the next area of enforcement would be the encroachment of unlicensed individuals into the 10 meter band and a crackdown on illegal RF amplifiers. His announcement drew loud applause from the Shelby crowd. Hollingsworth elaborated on the comments in a recent interview ARRL Audio News concerning this and other enforcement issues.

"There are really two areas we need to really crank up on next year. One is the incursion into 10 meters by unlicensed operators, CBers and so forth. And also the sales of illegal equipment on the Internet and at hamfests and so forth. We really need to crank up enforcement in those two areas."

Hollingsworth told the crowd that he'd spotted more illegal equipment at Shelby that he'd seen last May at the Dayton Hamvention. You may remember that at the Hamvention, FCC Field Office personnel from Detroit warned several vendors about potential violations relating to the advertising or merchandising of RF amplifiers capable of 11 meter CB radio operation.

600. FT-50RD - weird output fluctuation?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-10 00:00:00 UTC
From: mjbjr@best.com
Message-ID: <3801135e$0$222@nntp1.ba.best.com>
Source record: 96791

Recently, I have noticed that the output strength, as shown on the display, will drop 60% if there is already a carrier on the frequency, i.e.,

Go to open frequency, key-up, output meter shows 10/10.

On same frequency with carrier already active 10/10, key-up, output meter shows 4/10.

The above happens on both 2-meter and 70cm.

Ideas?

Thanx.

You mean to tell me that if I'm running an amplifier on 11 meter, I'm gonna be a bank robber in the near future?

Let me tell you all something here. Crimes are committed in one form or another. Hi-visible or not. It is up to Law Enforcers to sort out if there is a need for enforcement. Highway serial killers or Jaywalkers. Either way it is a crime. People can bitch, scratch, moan but the problems will not go away. Would you turn in a Jaywalker to a traffic cop and turn a blind eye to speeders, Identify your next door neighbor as a serial killer or turn your kid in to the schools Principle as a Truant? This whole argument over amplifiers on CB radio is downright idiotic.

I'll tell you why it is idiotic. Tech Plus ticket holders earned there right to use 2KW on CW by passing a pool questioned set of tests and passed a 13 wpm Morse Code test. What for? A mere 2 kilowatts. Wow! Don't get me wrong. Those tests are quite hard. But for 2 KW? Come on. Maybe in the upper frequencies, 2KW is the minimum to aquire long distant QSL's. But when you have an open set of frequencies existing on the 11 meter bandwith where no HAM transmitted and was a bandwidth no HAM were interested in transmitting on, the Federal Gov't said the heck with it. Lets give it to the people. And don't tell me that every HAM is a law obiding citizen, because when the 23 frequency bandwith was a Citizens Band set-aside, CBers wanted more. Just like HAMs. Talk further. Just like HAMs. And they didn't even need to take a simple test. As a matter of fact, all you had to do back then is just register for a CB Call-sign. What a concept. Now that the HAMs and the Federal Communications Commision had created a monster in their own image, they want to destroy it. Idiotic.

CBers will never stop. For every one CBer busted, five will take his place. For every one manufacturer put out of business, two will take its place. Its big business. Its not criminal. There are only a handful of Licensed HAM operators in this world. But there is a truck load that won't get their license and DX on 11 meter.

Just speaking the truth.

You don't have a clue, not a single piece of my ham gear (which includes Collins, Yeasu, and Kenwood) has a type acceptance tag. How about all those Heathkits, Knight-kits, and other ham radio kits that were built and put on the air. Were they type accepted? I think not. How about all the home-brew equipment built and put on the air, type accepted? I think not.

Hi,
Looking for a replacement DirecTV receiver to change out the one damaged by a voltage spike. Must be DirecTV. Must include receiver and CAM.

All the local places want to sell me the entire setup including dish, and I dont need all that stuff. They also want me to sign up for 1 years service on the front end and I'm already subscriber.

Prefer a model 1 or 2 years old -- an older RCA would be great, since that's what I had originally.

Willing to buy outright, or trade for ham gear (I have HF, VHF, UHF, Keys, etc).

Contact by email, please.
thanks.

Bill <billsohl@planet.net>
WHy do you cross post when it only shows your like of knowledge of the subject to hams and CBers alike. I called several amateur stores today HRO, AES, R&L, Micigan Radio and Communication Headquarters all said that amateur radios had to be type excepted by the FCC before they could be sold legally. This said I must conclude you ether don't know what you are talking about, knowingly telling what you know is untrue or the the rest of the professionals in amateur radio know nothing and you know it all. I can only conclude that by your amateur license class you don't know it all, so I'll believe those that know more than you.

Sorry, but those are apples and oranges.

A pipe bomb has the potential to harm non-consenting
individuals. A kilo of heroin (assuming it is sold to adults only) does
not.

A person has a right to harm him/her-self if they wish. It isn't
terribly smart. But it _is_ a right, regardless of rather society has
been brainwashed into believing it isn't or not.

A person does NOT have the right to harm others, however.

>Any ham who's operated the 10 or 12 meter or even 6 meter band within a
>few miles of a CBer using illegal equipment has probably been hurt by the
>interference.

Why?

If the equipment is high quality and properly adjusted, in what
way should it matter to the ham whether it is being operated on 11m by a
freebander or 10m by a ham?

> Many CBers have bizarre standards for "good audio"; such
>audio in any other radio service would be regarded as vastly overmodulated
>and distorted. To achieve such audio, many CBers remove audio limiters
>and crank up amplifed mics to the maximum.

True--but this is as much from ignorance as from any deliberate
attempt to cause interference in many cases. If a CB'er learns that
over-modulation does NOT increase his signal in any way, but instead
simply distorts it--and is shown how to _properly_ adjust his mic gain
and compression for maximum signal strength and readability, he is far
more likely to do so than not. This is particularly true of freebanders.

There are plenty of CB'ers who enjoy interfering with other
stations and "showing off," but simply because there are immature idiots
in any group doesn't mean all CB'ers are the same.

>Once such a dirty, possibly spur-ridden signal is put into a crappy,
>non-type-accepted amplifier, the end product can be downright scary, with
>a wide range of splatter and even stronger spurs. One local freebanding
>CBer actually used to "kerchunk" a 6 meter ham repeater with his spurs.
>I've personally experienced bootleg 11 meter splatter on 50 mHz.

True. But again educating the individual would probably help a
lot.

An additional point. You make it clear that part of the problem
is crappy, non-type accepted amps. Perhaps if we eliminated the laws
against the sale (but NOT the use) of power amps to non-hams we would
reduce that problem. There would still be as many freebanders and CB'ers
using the equipment illegally, but at least their signals would be clean
and confined to the frequency where they were transmitting instead of
splattering all over the band.

>Many CB amps are Class C, which I believe (correct me if I'm wrong) is
>intended for either FM or CW. Using such an amp for AM or SSB causes a
>wide range of splatter.

But why do they buy Class C amps in the first place? (Hint: It's
all they can get).

>I've known no hams to use CB amps on 10 meters. Once 10 is open, the many
>compact 25 watt mobile rig are usually adequate "barefoot".

Listened to any dx on 10m lately? I can _guarantee_ that hams
are using high power amps on 10m--as a low power and qrp op I regularly
find myself having to crank up my rig to at least 50W to even be heard
among the other stations--and 100W is the least I can hope to use if I
want to work a fairly rare country much of the time (while my preference
is to work at 5W or less).

The dx stations in many countries, btw, are running the same
"export only" amps that some of the freebanders are running--complete
with 11m capability--even though they are on 10m. Why? Because they sell
enough of the things (to CB'ers) for the prices to be lower than they
are for US-sales 10m amps of the same power.

Funny every pice of HAM gear I have is type accepted, and I have never
seen a piece of HAM gear thats not type accepted, and I'm not talking
about 10m anything, as most of it is designed to be moded anyways.

Is anyone here selling any 220 radios? I would like to find either a handheld or mobile rig.

I would prefer a handheld that can do 5 watts output.

As far as mobile radio I would like something that has at least 25 watts output power.

Price range $100-$300

OK
Commercial equipment has to be type accepted, but unlike CBers HAMs are
allowed to build there own equipment (even mod it) and that stuff does not
have to be type accepted.

Unless I am mistaken,

1. Tech Plus ticket holders have to only pass a 5 wpm test.
2. Tech Plus are only allowed to operate in 'Novice' CW subbands, up to the Novice power limit in those bands, which was 200 watts the last time I worked HF.
3. General Class license holders are the ones that pass the 13 WPM test, and have access to the full nine yards, i.e. 1500 w PEP.

Been there done that.

First, not all rigs handle this well. I use my noise blanker and it knocks it out completely with no degradation to the received signal. This is with a Yaesu 990.

I have had other rigs here over the years that could not do the job nearly as well. The Ten Tec Corsair, although a fine receiver, could knock the noise out completely, however, the received signals went to absolute trash.

My ICOM 706 Mk II does a good job at knocking out the noise, but the signals will suffer some unless you reduce the RF gain slightly.

An Icom 751 did well also, about the same as the 706.

A Drake R4 was useless!

The biggest problem with noise blankers is the degradation of the received signals. Specifically, the receiver will pick up trash from several kcs away - as if suddenly broadbanded or filterless.

Now about the fence. Most electric fences are loaded with joints that are poorly constructed. Hence arcing takes place. If the entire fence was repaired properly (with soldered joints)and the ground made properly (good bonding technique), most or all of the noise would go away. I know, because I have had electric fences of my own here from time to time.

Hope you have good luck with this.

Bill W2BLC

I will be visiting Seoul, Republic of Korea, from Oct 23 to 27. I would like to carry my 2-meter HT (ADI AT-201HP) along on the trip. The radio is normally set for xmit in US range, 144.000-147.995 mhz and receive 130.00-179.995 mhz. It can be modified for expanded xmit range.

US State Department says ROK Customs may restrict entry of certain radio equipment. http://travel.state.gov/skorea.html

"South Korean customs authorities may enforce strict regulations concerning temporary importation into or export from South Korea of items such as firearms, explosives, narcotics and drugs, radio equipment, books or other printed material and video or audio recordings which might be considered subversive to national security, obscene, or in any way harmful to the public interest, and cultural property."

Does anyone know of any restriction or problem that would cause ROK Customs to deny my radio? I will have the wallet-size FCC license with me.

I just e-mailed this same question to the Korean Amateur Radio League (KARL) but there has not yet been enough time for them to respond.

I would appreciate any advice either posted here or directly to me. Thanks for any info.

Cragin Shelton

: The info is a bit late for being "newsworthy", and you make it to read
: as if amps are forbidden on 10,....not true.
:
: Butch Magee, KF5DE

This was from last weeks NewsLine, so it is recent.

And it is illegal to manufacture a 10 metre amp. Hams may
modify an existing amp for personal usage however. But
no manufacturer will be able to get one type accepted. Ham
transceivers are allowed to be type accepted in the 10 metre
band for higher power.

: > By doing this you may be taking food out of their kids mouth, man that
: > doesn't sound too safe. maybe he would like to know who did this. man
>why
: dont you guys let the authorities do their jobs by themselves
:
: True, CB amps can't be compared to drugs, murder, or even DWI.
: There are a lot more critical problems in the world, and CB is
: very low on the priority list of any enforcement agency (as
: it probably should be).

CB is now a high priority to the FCC. It is called "fixing the
broken window" type of enforcement. The theory is that if
you let a window stay broken then it will lead to other types
of crime as people see that no one cares. The mayor of
NYC uses this tactic. He goes after small street crimes
like jumping the turnstyle in the subways.

Stop the small crimes and you will no breed bigger criminals.

: But it's SAD to see a "looters mentality" prevail in what was once
: a GREAT hobby. (i.e., during the LA riots, people who looted the
: abandoned stores did no one any "objective harm". The stores
: were insured...the cops looked the other way..."everybody"
: was looting....chances of getting busted were slim, etc.)
:
: What's wrong with breaking laws -- especially when it "harms
: no one"? I can only speak for myself, and personally, I would not
: want to be the kind of person "who only obeys laws when the cops
: are watching". To me, that kind of person is untrustworthy and
: sleazy.
:
: Now some may want to label the above opinion as characteristic
: of an "RF cop mentality", but if you do, you're really missing
: the point.
:
: I don't support anyone going around "turning people in".
: Vigilantism is not the answer, and neither is ham vs cb
: trashing and bashing.

Hams have an obligation to be self policing. No other
hobby has that obligation.

: I make no claim to be morally superior, but I sincerely believe
: that a "looters mentality" contributes to a lesser quality of
: life -- for everyone. It can be argued that the politicians are
: responsible for our problems, but I don't buy that. I think we
: are each responsible our actions, how effect others, and
: how our actions ultimately affect the whole of society.

Small crimes breeds people who do bigger crimes.

one.
: (Ok, so maybe you set off a car alarm or two as you drive down the road
talking
: with your amp on, oh well! :))
:
: Who gets hurt when a pusher sells crack to a 12 yr old child? You're
comparing
: apples and oranges.

The mayor of NYC went after small crime like turnstyle jumping
in the subways. Not only did they arrest a number of people on
outstanding warrents and for having illegal weapons, it decreased
crime in general. If we care enough to enforce the small laws then
we care enough to clean up the messes that breed crime. And
small crimes, that hurt no one, breeds criminals.

I do not see a problem with this. I at one time was one of the one running around with an amp for 11 meters. I think if we as ham operaters pushed amateur radio a little more and let people know they dont have to take the code test then maybe there would not be that big of problem. But on the flip side it is to easy to buy a cheap CB radio and amp verses buying a VHF/UHF radio. I dont think there will ever be a good answer though.

Hi All

Due to an impending move I have the following items for sale...

Number Available Description
--- ---

Two Motorola M110 mobile. 25 watts fully
programmable VHF mobile. Currently programmed
for 2m band. can reprogram for elsewhere in
150-170MHz band. Digital display etc. CTCSS and
1750 tone in built Good condition with mic,
mobile speaker and power connector.
75 UKP each programmed to your spec, plus post.

One Icom U6 6 channel 70cms handie inc 3 batts and
wallcharger and mini helical antenna inc
conversion details. Diode programmed to any
70cms channels. 50 UKP plus post.

Four 4CX250BM - new unused. 1 pair Svetlana the other
STC 25 UKP each plus post or 50 UKP pair post
paid.

One 13cms 10 watt PA - GaAsFET - 10 dB Gain on
carrier plate ready for mounting to larger
heatsink. Includes PA PSU controller PCB for
powering from 13V. Built ready to go.
120 UKP plus post.

One Mercury Whitebox 10 GHz transverter unit.
Req's 10 GHz LO to form a complete 80 mW 3cms
transverter from 144 MHz. LO can by supplied
from G3WDG. 20 UKP plus post.

One Complete set of modules for SSB Electronics
70cms transverter. Comprises 28MHz-70cms TX
converter, 70cms-28 MHz receive converter and
dual output 404 MHz LO. No paperwork but can be
downloaded off net. Old technology
now but good for newcomer. 30 UKP plus post.

All open to offers.

Epson is very clear about the fact that you can charge their NiMh only in 'their' charger. I have since bought similar AA NiMh batteries at Radio Shack and charged them in the Epson charger and it works fine.

Huh???? Why is it when I look on the back of my IC-756 it has "FCC ID:
AFJ IC-756". How come I had to wait to order one because "it had not
been type accepted yet"???

I have to disagree with the statement that there are no type acceptances on amateur trancievers. The FCC requires a type acceptance on radios over 1/2 watt and all recievers. Even if it is only Part 15. Before evryone gets up in arms, Part 15 among other things has to do with interference acceptance. 10 and 6 meter amps can be built with the prior approval of the FCC and they must have a type acceptance number. Just a few thoughts. Marilyn Hartley W4ME.

<wb5rue@stic.net> wrote:

> ALL Amateur Radio transmitters, receivers and transceivers
> that are sold commercially MUST be FCC Type accepted.

I'll repeat what I said to the other mistaken fella. There is
NO FCC requirement for Type Acceptance of any commercially
sold Amateur Radio equipment. Period. Not even for amplifiers.
(That'll raise some eyebrows!)

Here's the deal --

External RF Amplifiers -- These must be *certified* (key word =
certified) in accordance with Part 97 (97.315 and 97.317).
This was largely written to shut down mfrs of 11-meter capable
amps. It is NOT type acceptance.

Everything else -- most other amateur rigs get caught up in other
non-Part-97 *certification* requirements related to Part 15
emissions due to internal processors, non-reception of cellular
phone frequencies, etc., etc. A lot of other equipment is
subject to similar certification -- your PC, your radio/alarm-clock,
your walkman, and your wifes microwave oven. Again, none of these
have anything to do with type acceptance.

Type acceptance is a wholenudder animal, and no amateur radio
equipment is subject to type acceptance.

CB equipment is subject to type acceptance (in addition to Part
15 certification).
GMRS equipment is subject to type acceptance (in addition to Part
15 certification).
FRS equipment is subject to type acceptance (in addition to Part
15 certification).

Amateur radio is NOT subject to type acceptance.

>Er1 error messag

Mark,

I have an HTX-202 and have gotten that response also. I've read some info available on the RS website and one of the things that can cause the Er1 message is rf entering the radio through an external power cord. I get the error when runnung the radio as a mobile whenever the power cord tangle around the ext ant coax or the rubber duck is close to the power cord. If thats not it, I'd send it back to RS. Hope that helps.

I have seen mobile units blow their finals while sitting still. It seems that a perfectly good antenna can wind load and be fine or be moved around by the gentle breezes and open up dynamically. Very rough on solid state. Might check the swr while playing with feedling/antenna.

Just a thought...

You just don't have a clue. Every amateur radio in the US has to be
type excepted. Now I not talking about this junk sold as at your local
truck stop as a ten meter ham radio. Call Ten Tec, Icom, Yaesu,
Kenwood, Standard or any of the other manufactures of legal equipment
if you don't believe me or try calling a amateur radio store.

For Sale: Motorola Visar Dual-Slot Charger and Two Batteries

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=176625762

Dual-Slot Charger
High-Capacity Battery, 520MB Date Code
Med-Capacity Battery, 628MB Date Code

Everything listed is in excellent shape, and are spare parts that I've never needed. Selling them as a package deal extremely cheap! This whole package goes for over $300 retail! All genuine Motorola parts and are all working great, however the high-capacity battery has trouble transmitting... It will last a full 8-12 hours in scanning mode receive only, but won't transmit well unless in low power (1-watt output). Sold as-is. Reserve is VERY reasonable on this package. Please email with any questions. Good luck, and thanks for looking!

For Sale: Ranger RCI-7100, 16ch VHF Radio

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=176663075

16 channels
5/1 watt selectable output
148-172Mhz
Built-in Scanning with Priority Scan
CTCSS/DCS/PL capable
Good Battery & Antenna
Comes with AC Charger
Get complete specs at http://www.ranger-inc.com/4b-ra_lmr.html

This is an excellent VHF two-way radio, at a very reasonable price! It can compete with major Motorola, Maxon, Vertex, and other manufacturers! Radio is in excellent shape (9 out of 10 cosmetically) and is in working condition. I no longer have the programming equipment so I can't program this radio for you, but it can be programmed by a dealer, or the equipment can be purchased from Ranger very cheap. Radio sold As-Is. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

Source record: 96733

Hi,
I went through this a year ago and Yaesu clearly stated that you cannot charge NiMH batteries in their charger. You would have to get one of the new kind that other companies make that will handle both kinds.Good luck.

A friend gave me an old Raytheon Ray-Tel TWR-2 CB radio this past weekend. It's in decent shape, but doesn't work (the tube filaments light up, but that's it). Since I work for Raytheon, I thought it might be fun to try to restore it to working condition, just for grins. So... does anyone have any information on that model? Owner's manual? Service manual? Sams Photofacts? Anything of interest?

73,
Dean / K5DH

Is it supposed to be on? The fan only comes on when the finals reach a
certain temperature. If you don't transmit, or stick to low duty tranmissions
such as cw or ssb, it may not go on.

There is Two that I use,
ABC Communications is on 15th and 175th in North Seatlle/Mount Lake
Terrace area (North on I-5 to 175th exit Just past Northgate Shopping
Center right at light go 8 blocks to 15th make a left and its right
there), and the other is just off Michigan/Corson in South Seattle, It
just opened so I cant remember the name right now, But you go south on
I-5 to Michigan/Corson Exit go to bottom of the hill and there is a
small mall right there at the light with a woodworkers store (Big one)
its right in there, Called Radio Store or something like that.

Hope that helps

Rick KF7QZ

And what else can we expect from YOU, Slick??? Spin, spin,
spin.
```

The fact that type acceptance for amateur radio equipment
does not meet the exact same criteria for "Type Acceptance"
in the commercial radio services does NOT mean that it is
not type acceptance. DE FACTO that is exactly what it is.
When the advertising said that the Yaesu FT100 transciever
was not yet available for sale because it had not been
"approved" for sale by the FCC, what it was saying is that
it had not yet been tested and had not yet met FCC's
emissions purity standards. In short, it was not yet type
accepted. When the sample model passed those tests, all
FT100 radios would be legally approved for sale. THAT is
type acceptance, if not "Type Acceptance".
It is still a fact.

From: cragins@chele.cais.net
Message-ID: <0fJM3.91$LO6.1227001@newsie.cais.net>
Source record: 96504

For those interested in the answers I received... A former Korean-licensed HAM now living in New Jersey wrote to tell me that Korea requires separate Operator and Station licenses, and does not reciprocate with US FCC licenses. Although HTs are very popular there, they only recently allowed mobile units.
In addition, the Korean Amateur Radio League sent me the following:
DEAR SIRS,
THANK YOU FOR YOUR E MAIL IF A FOREIGNER WOULD LIKE TO OPERATE A
RADIO STATION IN KOREA HE MUST GET AN APPROVAL FROM KOREAN
GOVERNMENT AND TO DO THIS HE MUST SUBMIT THE APPLICATION
AT LEAST 3MONTH BEFORE HIS ARRIVAL IN KOREA.
SO AT THIS TIME WE CAN GUESS IT IS VERY DIFFCULT TO DO THAT.

Based on this feedback, I will arrange to mail my HT home from Hawaii, rather than try to enter Korea with it. Even though I had not planned to operate the HT there, I consider it wise not to test the Customs Agents' understanding.
My thanks to the correspondents.

> nits, Slick.

Hi Big Boy,

Watch my lips -- closely -- really closely.

Are you paying attention now? Here is comes.....

THERE IS NO FCC TYPE ACCEPTANCE ASSOCIATED WITH THE AMATEUR
RADIO SERVICE IN THE UNITED STATES OF AMERICA.

There is no wiggle room at all in that statement. None. Nada.
Zippo. Zilch.

There is no de facto type acceptance, nor is there any de jure
type acceptance associated with amateur radio.

This is not splitting hairs. This is not picking nits.

If Amateur Radio equipment required type acceptance by the FCC
you could not build your own equipment. You could not modify
any type accepted equipment from another service for use in
the amateur service. You could not modify commercially built
amateur "type accepted" equipment you purchased. Further, the
FCC could cancel any previous type acceptance and make your
new FT-1000D immediately obsolete and unusable in the
amateur service just because it didn't want you to run LSB
anymore.

Pure and simple, there is nothing which even resembles type
acceptance in the Amateur Radio service. Thank God!

In short, you don't have a clue about what you are
talking about.

>When the sample model passed those tests, all
>FT100 radios would be legally approved for sale. THAT is
>type acceptance, if not "Type Acceptance".

It is NOT type acceptance in either upper or lower case.

> It is still a fact.

And, thankfully, you are not a trier of what is or isn't
fact.

Cheers,
Bill K2UNK

Challenge: Point out where, in Title 47 CFR Part 97, it is mentioned
that amateur radio transceivers must meet type acceptance.

(All you will find are limits set on spectral purity. Ours is the
only radio service in which operators are entrusted to have the
technical competence in which to abide by the stated regulations;
this privilege of trust is due to the amateur's self-policing nature.
We either abide or lose our license.)

This is exactly right. Somebody else mentioned FCC conformance, or certification. That is also correct. Some local, county, and state agencies require electrical equipment to have UL and FCC certication (where applicable) if it to be sold new through retail outlets. Manufacturers are anxious for their products to conform to these regulations. One issue involved in certification now seems to be whether the equipment is easily modifyable to receive 800 MHz cellullar or not. Amplifiers must not be easily modifyable to operate on the 11 meter band.

No,
but the rooftop antenna installation is what first attracts anyones attention.

I get griped at by the neighbors for creating interference, the local
neighborhood association has been trying to force me into removing
the installation entirely (I was here before they were). and it seems as
though
everytime there is a problem that is radiop related, I also get that knock on
the door
asking what I am doing? etc.

There are 2 hams that live close by and theres a 25 KW am transmitter located
in
a field just east of my location (910 KFYI).

So, I don't see why I have to put up with all the bitching. I meet all FCC
requirements
here (even had the fcc come in and do an inspection to determine where the
problem was).

This is why I get any attention at all from the neighborhood, I have a very
visible setup.

Forfeiture. Now that's a great idea. That's like giving government enforcement officials (police, DEA,
SBI, FBI, FCC, etc.) a blank check. Since forfeiture falls under civil law it's not "not guilty until proven
innocent" but "preponderance of the evidence". Many people have had items (cars, houses, money)
seized by the government who were NOT guilty yet could not afford the civil trial to get it back.
Unless you have been in a cave for the last 10 years you couldn't help but hear the many horror stories
told by honest innocent working folks who got tagged beacuse they had too much cash or a kid who sold
a narc a joint. The bad guys can afford to lose stuff to forfeiture.

I have heard Texas drug enforcement officials "shopping" for vehicles to stop. No lie. I heard and watched
them stop and detain 2 Hispanic young men who just "fit the profile" (not many Hispanic folk in Texas...hi. hi.).
They had $600 in cash and a new truck. The undercover officers had followed them from Austin and had the
local police dept. stop them and call the dogs out.

The officers then spent the next hour talking on their radios about how their boss would like a new truck, and
how the cash would make a nice addition to their training ("entertainment") fund. Well the 2 men had the
money by legit means (receipt from selling some tires and rims)), they were searched (twice) and basically
hassled just to "maybe turn something up" (direct quote). After they let the men go I continued to listen
to the officers while they headed back to Austin, "shopping" for a new SUV. They actually pulled into a
gas station and scoped out one guy who they were sure "fit the profile" (was ethnic and had a nice ride)
but they decided not to hassle him after he turned out to be a local deputy. I really wish they had called the
locals on him.

BTW, The Chief of police in this Texas town drove a nice caddy thanks to a hapless pot smuggler who
stopped in the wrong rest stop. Having that nice car available for the Chief was definitely a crime deterrent.
Wonder what he drives now...

Forfeiture. BAD IDEA. Unless you live in a police state...

CUL,
-barryc

Andy's theory could be right. The FT-50 *does* have a system like
that--they call it Transmit Battery Saver. From the menu, it's number 15
(TSAV) or you can press Function (F) then 8 (TX SAVE) and get the same thing.

I'll have to try it out.

I have two FT50R radios for sale:
Each includes antenna, batteries (see below), charger, manual and
FTT-12 keypad.
Both have wideband Tx\Rx and receive all of 800 MHz (getting
rare).
Both are in good condition. Non-smoker owned.

One radio will include:
(1) MAHA NiMH MH-FNB-41 9.6V 900mAh battery
(1) Yaesu NiCd FNB-49 6V 600mAh battery

Will sell for $230.00, shipping in US included from CO.

The other radio will include:
(2) Yaesu NiCd FNB-49 6V 600mAh batteries

Will sell for $210.00, shipping in US included from CO.

I also have 2 Yaesu NiCD FNB-41 9.6V 600mAh batteries that are nearing
the end of their lives and have diminished capacity. I'll include one
with each radio. Just be aware that they are in poor condition. The
other batteries are in good condition as are the radios.

You can see the radios at:
http://www.gj.net/~jrhodes/ft50.jpg

Please email me directly if you're interested.

Indeed! If type acceptance were needed, then we couldn't put any of
our personal home brew transmitters or amplifiers on the air at all,
since I don't know of any hams willing to spend the time and money to
have their equipment put through type acceptance testing.

By definition, IT IS NOT type acceptance, otherwise all those transmitters you've built over the years are illegal. Right!

Of all the Bulverisms (see the C.S. Lewis collection "God in the Dock", part III, chapter 1 for an explanation) I've read online, this is one of the silliest. Exactly how did you come up with this "insight" into Hawke's motivations? Do you have a gift of telepathy you haven't told us about? Have you commissioned PIs to investigate his life? Out of all the miriad reasons why a person might be an swler, but not a ham, is there any valid reason you can give why you picked out this one?

>Your statement doesnt make sense, your not a ham ,but
>you have to put up with comments from non hams and cbers.

It made perfect sense to me. He has no transmitters, but does have a quite visable antenna system. Because of the visable antenna system, his neighbors tend to blame him for every little glitch on their TVs, radios, and phones, despite the fact that he's not operating a transmitter. This is a problem any ham should empathize with.

Aha!

Paul, I had the exact same problem with my 706IIG. It always started working again after several minutes (sometimes more than half an hour) of downtime.

I cannot prove it, but I believe that this is due to a heat problem. When the IIG came out, they upped the 2m power to 50W. Maybe they didn't improve the heat sink??

My unit is in the trunk of my car. I now make sure that the kick stand is deployed so that the unit does not lay flat on the floor of the trunk, so that air flow is better. Also, I do not run more than 25W at 2m when mobile. I have not had a problem since.

Seems that since at least you and I have had this exact same problem, there may be a design flaw.

Sorry Stan. You are wrong. Type acceptance
is a very specific set of design requirements and
standards which have been set in place by FCC
regulation for radios used in certain services. No
such "type acceptance" criteria exists for any
amateur radio equipment.

Cheers,
Bill K2UNK

NJMedMan <njmedman@aol.comnoemail> wrote in Rec.Radio.CB...
: Who gets hurt when someone sells an amp for use on the 11 meter band? No
: one.

And no one is "hurt" when a pipe bomb or a kilo of heroin is sold. It's the actual USE that hurts.

Any ham who's operated the 10 or 12 meter or even 6 meter band within a few miles of a CBer using illegal equipment has probably been hurt by the interference. Many CBers have bizarre standards for "good audio"; such audio in any other radio service would be regarded as vastly overmodulated and distorted. To achieve such audio, many CBers remove audio limiters and crank up amplifed mics to the maximum.

Once such a dirty, possibly spur-ridden signal is put into a crappy, non-type-accepted amplifier, the end product can be downright scary, with a wide range of splatter and even stronger spurs. One local freebanding CBer actually used to "kerchunk" a 6 meter ham repeater with his spurs. I've personally experienced bootleg 11 meter splatter on 50 mHz.

Many CB amps are Class C, which I believe (correct me if I'm wrong) is intended for either FM or CW. Using such an amp for AM or SSB causes a wide range of splatter.

I've known no hams to use CB amps on 10 meters. Once 10 is open, the many compact 25 watt mobile rig are usually adequate "barefoot".

In a post on the type acceptance of amateur radios in the U. S. there was a reference to an "FCC Number." The FCC number IS the type acceptance number of that radio. All you have to do is call the FCC and feed them the number off the radio ID plate and the FCC will tell you what radio you have and when the original type exceptance was issued. I am a retired commercial radio service technician. I have dealt with the type acceptance for over 25 years making sure that the customers radios are legal from the standpoint of type acceptance. A good example is the Motorola Motrac/Motran, GE Mastr Pro, and the GE Prog Line. They are all over 25 years old and the type acceptance has been pulled by the FCC. Per the Communications Act of 1934 from which the FCC Rules and Regs derive MANDATES type acceptance and licensing of all transmitters in the U. S. I made mention of the FCC ID number on the radio model or id plate. The type number is there by law. Amps for 6 and 10 meters can be built with the approval of the FCC..... They too get an FCC number. Marilyn Hartley W4ME.

yes dumb laws exist. Ignoring dumb laws don't make them go away. It is one step towards complacency. If one can justify a law as dumb and ignore it, then one can reason that any law is stupid and can be ignored. Thus breeds comtempt for all rule of law. It starts with the simplest of laws. While no one is 100% compliant with 100% of the laws, yours truly included, one should respect the laws. If caught own up to the mistake. The lthaught of " it ain't illegal until you get caught" has filled the minds of many in this society today.

thats my thought

So go ahead and split your usual hairs and pick your usual nits, Slick. Each new commercially built piece of amateur radio transmiter apparatus must *topday* be approved, as a unique type, by FCC before it can be sold BY FCC REGULATION. THAT *is* indeed type acceptance, for each subsequent copy of that model does not have to be individually approved. It was not always so, just as it was not always illegal to commercially produce amateur amplifiers which work on 10 meters.

It was not stated that amateur gear is required to meet the exact same type acceptance as commercially used equipment. That would be pointless since all of the standards are not the same. But it is nontheless type acceptance. Its A Fact.

Looks like you may have answered your own question even if
you don't know it. The equipment, whether or not of high
quality, is clearly NOT properly adjusted and in instead
splattering spurious sidebands all over that part of the
spectrum.
I have long been a user of a conventional 5 watt CB set
with a small magmount antenna, for use on the road when
travelling with another vehicle whose occupants aren't hams,
for on the road communications. One thing you quickly learn
is that you don't have to see the trucks to know they are
coming. Their splatter from Channel 19 down to the RV
channel 14 is warning aplenty.

Which pretty well proves the point- Most of those folks
DON'T WANT to learn a nything about radio, rather they
just want to yak without constraints.

>
> There are plenty of CB'ers who enjoy interfering with other

That's true. But the numbers of those who just don't care
are quite large.

> splattering all over the band.

So you'd advocate going from what doesn't work *now* back
to what didn't work BEFORE FCC instituted the rule against
building 10meter -capable amps. Right.

>
> >Many CB amps are Class C, which I believe (correct me if I'm wrong) is
> >intended for either FM or CW. Using such an amp for AM or SSB causes a
> >wide range of splatter.
>
> But why do they buy Class C amps in the first place? (Hint: It's
> all they can get).

Don't think so. CB'ers and hams mostly use LINEAR
amplifiers. Class C is about as non-linear as it gets. Maybe
you've heard of class A as the most linear, class B operates
on about half the RF cycle and class C is almost pure square
wave. Anyone attempting to use a Class C amp as a "limear"
is totally uninformed. And since ham band "linears" were so
often being used on CB, the FCC ruled against their
construction as 10 meter capable units, as noted above.

Many CBers DID use class C equipment when hams mostly
abandoned AM gear, which did use high level plate modulated
Class C amplifiers on AM.

Many old Johnson and Heathkit ham band rigs -with VFOs that
were factory built to operate on the 11 meter band, when it

was a ham band- were and still are used by some CBers on AM.
Mostly that is the extent of Class C amp usage on CB.

Almost without exception all SSB amps in use on both ham
bands and CB operate class AB1 or AB2 (slightly more than
50% of the RF cycle is amplified) and are classed as Linear
Amplifiers. **BUT**, only when adjusted and operated
according with their technical requirements for maintaining
their linearity. Overdriving, mistuning, impropper loading
all destroy their linearity, and since no CBer is required
to learn anything, and no Freebander is constrained by much
of anything, is follows as no surprise that so many
extremely dirty signals eminate from the 27mc region. And
this is the reason why CB gear is required to be type
accepted, is forbidden to be altered or modified and is also
the reason why so much of it is modified for CBers.

>

> is to work at 5W or less).

I haven't checked 10 meters lately, but when 10 is open,
you can work the world on 5 watts with a wet noodle for an
antenna. Power is *not* necessary, unless serious band
congestion demands it for overcoming interference.

> The dx stations in many countries, btw, are running the same
> "export only" amps that some of the freebanders are running--complete
> with 11m capability--even though they are on 10m. Why? Because they sell
> enough of the things (to CB'ers) for the prices to be lower than they
> are for US-sales 10m amps of the same power.

There's no question that CB-Freeband has created a quite
large market for ham radio gear-all of which has alway been
and still is, used illegally. There are large numbers up
there who have decided that "it really doesn't matter what
the law says, no one cares what we do". It was and is a
travesty of extreme proportions. But not they are becoming
emboldened.....

FCC had no idea what they were creating when they placed
the Citizens Band on 27 mc. When they found out, all they
could is mount whatever feeble attempt at enforcement that a
disinterested and uncaring Congress would fund. This was so
ineffective against such widespread flagrant and almost

universal illegal activity, that it ultimately faded to black. The rest is history. That history **MUST NOT** be ignored by the regulators of today who must decide the future of ham radio.

The one lesson that comes through loud and clear-- *THERE'S NO TURNING BACK** Once it's done, it stays done.

But they have been told that class c amps are more efficient, no matter that if you try to push SSB or AM through one all you get is a lot of distortion. Most cbers don't seem to intent on communicating, just on having a "big signal" (lot of noise) on the band.

Oh?
based on what facts?

I hate to say it, but a fair number of the CB crowd here in Arizona
are NOT HAMS! They go into Ham radio outlet, buy the equipment
they want, WITH CASH, walk out, have some two-bit cb dealer
modify them for open band use and there you have it. Its almost cheaper
getting a "rig: with 30 MHZ of capability than buying an "Export model CB"
with only 4 MHz of capability and 1/5th the power.

I should know, I have a neighbor up the street that insist on running
5 KW out of his house on 27 MHz when I am trying to watch the channel
5 news! In doing a little research, I have discovered that, in fact, only
about
30 or so hams ever bother with the CB band locally, and perhaps only
about 10 of those attract any attention to themselves with high power and
potty mouths.. Considering that most of this group of hams hangs out
on a simplex frequency smack in the middle of the 2 meter band, we know who
the trouble makers are.

Secondly, I am not a ham, but I have to put up with comments from non-hams
and cb'ers about my SWL Installation.. so, I have come to this opinion: if
you
don't like it, do something about it! otherwise, shut up!

Hawke

http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo

There you will find loads of projects documented projects including antennas, transmitters, receivers, PSUs and many many usefull circuits. PCB foil patterns are included for many projects and there are even photograph illustrations of the more recent projects.

I have recently included loads of freeware and shareware software packages for PCB drafting in the DOWNLOADS section. All the more recent PCB component layouts and PCB-foils are in BMP format so that everyone can read and print them (they are zipped).

Amongst the more recent projects added to the page are:
- TBA120 NBFM receiver - 100KHz to 100MHz, change two coils & crystal.
- Simple 4-watt AF amplifier - much better than the LM380.
- Extending the Balcony Antenna using Fractal & Meander principles.
- VHF digital direction finding system.

The site is well worth a visit. I hope you have fun - Harry SM0VPO

I have had loads of E-mail because the DOWNLOAD pages frequently give the error message FORBIDDEN when trying to get a ZIPped PCB foil pattern or datasheet from my homepage. Harry's Homebrew Homepage is lcated at:

http://sm0vpo.8m.com/
http://www.geocities.com/SiliconValley/3569/
http://hem2.passagen.se/sm0vpo
http://members.xoom.com/sm0vpo

The Passagen and Xoom sites (for Europe and the far East) have recently added banners to the INDEX file. When you click on another site (example http://sm0vpo.8m.com) then these servers import the files to their own server. Great! it's all free, but if you try to download a PCB foil pattern ZIP file you are accessing the site from an external site! This results in the message FORBIDDEN!!

If you want the PCB foils then copy (Ctrl+C) the URL and paste into the ADDRESS panel of your browser (Ctrl+V) and it will load the original site. You can then download to your hearts content.

I hope you have fun - Harry SM0VPO

798. Re: Looking for DirectTV Receiver....have ham gear for trade or cash.

Looking for a power transformer for a Heath DX-40
transmitter. Someone gave me a DX-40 in reasonably
good shape, but the power transformer is missing.

73,
Dean / K5DH

800. Who needed empty FT-243 holders?

A while back, I heard that someone, perhaps on the west coast, was looking for FT-243 crystal holders. The fellow was making new elements for them for the ham bands, but he needed more of the empty holders. I have a whole bag of them (probably 2 or 3 dozen) that I will part with. Anyone know who that guy was???

>I'll believe those that know more than you.

Believe whatever you want. Ham rigs are not
subject to type acceptance. I'll repeat again that
they are tested for compliance with certain other
FCC rules and regs, but none of that constitutes
type acceptance.

Cheers,
Bill K2UNK

What else can I expect from you Dick? You ignore
reality in your comments above. You wish to expand
"type accepatnce" to mean something it isn't.

> It was not stated that amateur gear is required to meet the
>exact same type acceptance as commercially used equipment.
>That would be pointless since all of the standards are not
>the same. But it is nontheless type acceptance. Its A Fact.

Type acceptance has very specific requirements for
each and every different service that type acceptance
equipment in called for by the FCC rules. Please show us
where in Part 97 there is any mention of type acceptance.

Cheers,
Bill K2UNK

803. Parting out Heath DX-35

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-12 00:00:00 UTC

Sigh. Here we go again. Amateur radios do NOT NOT NOT need to be type
accepted. Type acceptance is only used on bands where the operator is
not responsible for technical conformity. Since hams are "supposed" to
be technically competant, the radios do not need to be type accepted.

Most people confuse type acceptance with part 15 compliance. ALL radios
must be part 15 compliant (Also known as "FCC approved").

Look again. Does it say "type accepted" or does it say "FCC approved",
they're NOT the same thing. FCC approved means that it passed part 15
tests, it has nothing to do with type acceptance for particular radio
services.

Non of my ham gear is type accepted, but they all have an FCC id number
and "approval".

And I'll counter that most likely the $6 a hour flunkies that work at
these store don't know the difference between "FCC approval" and "FCC
type acceptance" either. There IS a BIG difference. ALL radios must be
"FCC approved" for compliance to part 15 emissions requirements, but
only radios manufactured for certain radio services need to be type
accepted. The Amateur radio service in NOT one of them.

You're right. In a society where we can sue
people because our feelings have been hurt, that's
an important consideration. Let's call it
"relatives of victim's rights". Oh, and don't
forget to think of the children.

Come to think of it, I feel terrible that the
cigarette companies profit from other people's
deaths. Hang on while I put a monetary value on
my suffering and call my attorney. And lobby for
legislation! How dare they screw up their lives
by smoking! Don't they care how *I* feel.

If there's anything wrong with our country, it's
that people bitch too much about truly
insignificant causes.

Just random thoughts

I have a friend who wants to get into 2M SSB, probably with something like the HamTronics transverter setup.

Anyway, he got hold of an old President McKinley SSB CB to use as a core.

Unfortunately, it was mucked with. I need to know if anyone has a schematic they can scan of the PLL section and if they have an alignment procedure to start with. If I can't get the thing working right first, I'll really have trouble with the conversion.

:
:
:
: 1 the bands are not yours. it is allocated to you by the itu.
: they giveth and they taketh away.
:
That goes for all of us, in every service. If we do not clean
up the mess that Americans have made of both CB and
ham bands, there will be no public hobby services.

: 2 you are nobody. you have no powers and no rights to clean up anything
except
: whats yours. and nothing is yours except the equipment you use, not the
freqs
: you use it on.
:
The FCC has authorized the ARRL to assist in enforcement.
Therefore we have "OOs". And these radio frequencies belong
to the American people, therefore it is the responsibility of all
Americans to turn in law breakers.

: 3 i bet you would love to give all those truckers using amps a
:wipping. sounds like thats right up your alley.

What will happen is that there will be more operations that
trap CBers using illegal equipment. Watch for those truckers
to lose their 18 wheelers to the federal government.
The FCC will give them a real good spanking.

:
: No. The real problem is that we have raised an entire generation who has
no
: respect for the law. The "It's okay as long as I don't get caught"
mentality
: prevails. Just another example how we're sinking ever lower as a society.

If push comes to shove, the "adults" in our society will demand
discipline. That could mean people losing their homes, 18 wheelers,
and other property over illegal equipment. Just like the drug war.

Mr. 137 <ac137@iwvisp.com> wrote in message
news:s04t6vq5h1s35@corp.supernews.com...
: You mean to tell me that if I'm running an amplifier on 11 meter, I'm
gonna
: be a bank robber in the near future?
:
: Let me tell you all something here. Crimes are committed in one form or
: another. Hi-visible or not. It is up to Law Enforcers to sort out if
there
: is a need for enforcement. Highway serial killers or Jaywalkers. Either
: way it is a crime. People can bitch, scratch, moan but the problems will
: not go away. Would you turn in a Jaywalker to a traffic cop and turn a
: blind eye to speeders, Identify your next door neighbor as a serial killer
: or turn your kid in to the schools Principle as a Truant? This whole
: argument over amplifiers on CB radio is downright idiotic.
:
: I'll tell you why it is idiotic. Tech Plus ticket holders earned there
: right to use 2KW on CW by passing a pool questioned set of tests and
passed
: a 13 wpm Morse Code test. What for? A mere 2 kilowatts. Wow! Don't get
: me wrong. Those tests are quite hard. But for 2 KW? Come on. Maybe in
: the upper frequencies, 2KW is the minimum to aquire long distant QSL's.
But
: when you have an open set of frequencies existing on the 11 meter bandwith
: where no HAM transmitted and was a bandwidth no HAM were interested in
: transmitting on, the Federal Gov't said the heck with it. Lets give it to
: the people. And don't tell me that every HAM is a law obiding citizen,
: because when the 23 frequency bandwith was a Citizens Band set-aside,
CBers
: wanted more. Just like HAMs. Talk further. Just like HAMs. And they
: didn't even need to take a simple test. As a matter of fact, all you had
to
: do back then is just register for a CB Call-sign. What a concept. Now
that
: the HAMs and the Federal Communications Commision had created a monster in
: their own image, they want to destroy it. Idiotic.
:
: CBers will never stop. For every one CBer busted, five will take his
place.
: For every one manufacturer put out of business, two will take its place.
: Its big business. Its not criminal. There are only a handful of Licensed
: HAM operators in this world. But there is a truck load that won't get
their

: license and DX on 11 meter.
:
: Just speaking the truth.

Then we have a rebellion on our hands. And maybe a government
crack down. Either we are self disciplined or slaves. Freedom
depends on our self discipline.

Hi Guys

My TM-731A Mobile rig dropped it's program recently and for the life of me I can't find my operator
manual. I had it in my glove box for years but was starting to look a bit tattered so I put it in a really
safe place to stop it getting damaged more. BUT I have tried pressing button intelligently at random
see if I can stumble over the way to program and no-standard off-set for transmit, ie:-

144.000 Rx
148.000 Tx

And then save it to memory..

Can anyone help with their wisdom ?

Regards
Craig Sullivan

Yep. The first run of every ad in the ham mags on the
latest rig from Yacomwood will carry fine print saying "This
transceiver is not yet for sale pending final approval of
the FCC" or words to that effect.

If it is homebuilt no such rule applies.

Yes, grab a copy of QST or the other ham mags and look for Communications
Concepts advertisements. They do the amplifier kit thing very well. It
doesn't make a tremendous amount of sense to go from 50 to 200 watts,
that's only one S-unit on an average signal strength meter.
Better to go with 10dB and make it 500 watts...

Exactly! The marine radio service requires type accepted equipment that
adheres to the technical requirements of Part 83.

The same would be found in the aviation, land mobile, FRS, GMRS,
citizens Band, and other commerical services. But NOT Amateur Radio.

You will never see a tag on a ham radio that says "Type accepted for
technical requirements of Part 97"

You WILL see a tag that says "FCC approved" or "Complies with FCC Part
15" or something similar.

I'm looking for a part number for the pot in the G1000 SDX rotator...and is it available from vendors such as Mouser? I believe it's a 500 ohm pot..it has 3 terminals and has the number "91" printed on the bottom of the pot.

thanks,

Terry

The reason for this is many Hams are mad that the FCC is targeting the Amatuer Band and not the cb band so they cry about the amps and freebanders etc, when in reality many hams are CBers in hiding and are also contributing to the mess.

All prices are PLUS boxing and shipping from 96003. Speakers are classed as oversize so will be charged as a 30lb. package. That is UPS's deal not mine.

Two RME VHF-152A in very good cond. $30.00 apiece.
RME HF 10-20 in very good cond. $30.00

Gonset converter covers 26.5-30.5 mhz in good cond. $10.00

Heathkit model AM-2 reflected power meter w/original manual. $15.00

Hallicrafters speakers:
R48 in very good cond. $35.00
R46 in good cond. $35.00
Two PM-23. One has the "H" but grill is rusty. $30.00. One with out "H" is in good cond. $35.00

Hammarlund original manuals:
HQ-180 $35.00, HQ-145X $30.00, two HQ-140X $25.00 apiece.

Atlas 210X / 215X original manual. $15.00

True,
I indicated that I am not a "ham". However, this does not mean
tat i am not a "federally licensed radio operator" of some kind.

However, the current setup I have at home is strictly SWL in nature
(no transmitting gear of any kind). Also, you want to tear me a
new orifice? Good luck, pal. You can't tear your way out of a wet paper
bag! :)

> Have you seen his watt meter?
>

One doesn't have to see a wattmeter. If you have sefficiently accurate
equipment,
or good knowledge of RF principals, then determining the amount of RF with
a given type of antenna is not hard. Now, the person in question lives roughly

4 blocks north of me (about 700 feet). He has spectrum splatter that
propogates
upward throguh the VHF spectrum on chan 2, chan 5, and I have heard him
on harmonics as far up as 162 MHz from that distance.

Now, according to the RF interference handbook, the stronger and RF
source is, the higher up the rf spectrum you can hear its harmonics.. I'd
say that from near 1/4 mile away, 5ht and 6th harmonics are quite substantial
to make an "educated guess" as to power level/ Also, the person in question
has
made it clear he was "running 5 gallons" from his home (the term gallon
referring to a KILOWATT measurement).

Also, on this point, I have had some discussions with a few local hams on this
matter.
they can clearly hear his spectrum splatter on the 10 meter and 6 meter bands
from
more than 5 miles away (also suggesting the presence of a powerful AND dirty
transmitting source).

From: Chris Singleton <csingle@dmv.com>
Message-ID: <38054511.AE7F6C63@dmv.com>
Source record: 96421

I am looking for an HT Mount for an Alinco DJ-580 to mount in a Ford Windstar Minivan. I have tried the MFJ-315 JAWS Gripmatic device, but the 12VDC power plug is on the side where the grip holds the rig. I do not want to drill any holes, so a suction cup mount is preferred.

Please advise of any other pre-manufactered or "home-brew" ideas...

Thanks and 73's....

Chris Singleton

Just curious. Have you served your country? Do you vote every single election year? Do you even vote for your Mayor, etc, etc? Im sure you probably answered yes to all of them. My question is. Do you want this to remain the "free" America, or would you like it to be run under dictatorship? Where everyday the president gives a Presidential Order of some sort, or some silly law is passed.

Im sure you have been asked if you ever J-walked or speeded on a highway (even by one mile that is, since, "little violations of the laws leads to disrespect of law in general").

MaryW4ME <maryw4me@aol.com> wrote ...
: In a post on the type acceptance of amateur radios in the U. S. there was
a
: reference to an "FCC Number." The FCC number IS the type acceptance
number of
: that radio. All you have to do is call the FCC and feed them the number
off
: the radio ID plate and the FCC will tell you what radio you have and when
the
: original type exceptance was issued. I am a retired commercial radio
service
: technician. I have dealt with the type acceptance for over 25 years
making
: sure that the customers radios are legal from the standpoint of type
: acceptance. A good example is the Motorola Motrac/Motran, GE Mastr Pro,
and
: the GE Prog Line. They are all over 25 years old and the type acceptance
has
: been pulled by the FCC. Per the Communications Act of 1934 from which the
FCC
: Rules and Regs derive MANDATES type acceptance and licensing of all
: transmitters in the U. S. I made mention of the FCC ID number on the
radio
: model or id plate. The type number is there by law. Amps for 6 and 10
meters
: can be built with the approval of the FCC..... They too get an FCC number.
: Marilyn Hartley W4ME.

The guys might be right. Our equipment may only be
type approved rather than type accepted. It is based
on our technical expertise compaired to other services.

W1RFI <w1rfi@aol.com> wrote
: >>A lot of other equipment is subject to similar certification -- your PC,
: >>your radio/alarm-clock, your walkman, and your wifes microwave oven.
:
: PCs and peripherals can be Certificated or can be manufactured and sold
under a
: "Declaration of Conformity." The radio/alarm clock, walkman and microwave
oven
: are "Verified" under Part 15, not Certificated. "Verified" means that the
: manufacturer is required to test them to ensure that they comply with Part
15
: limits. That's it; no FCC involvement at all. Most of the devices
regulated by
: Part 15 are "Verified."
:
:
: 73,
: Ed Hare, W1RFI

Ed, as you are with the ARRL, you do have a certain expertise
that we respect.

: >>The FCC still approves all commercially made Ham transceivers
: >>before they are offered for sale.
:
: Not really; If memory serves, HF amps and equipment that contains scanning
: receivers is subject to Certification. Under Certification, the
manufacturer
: sends information and test results about the equipment to the FCC and they
: issue an FCC ID # from there.
:
: Other ham gear is subject only to the requirements of Part 97, with no FCC
: involvement at all.
:
: 73,
: Ed Hare, W1RFI

Is it certification or approval? And why does it take
so long for a new piece of equipment to get said
approval before it can be sold?

It is called nannyism. Punish everyone instead of
going after those causing the problems. The problem
is that demoralizes everyone because everyone says
why bother being better, it doesn't pay.

877. Equipment grounding

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-13 00:00:00 UTC
From: owner1999@yahoo.com
Message-ID: <7u17fi$nui@caribe.pdx.oneworld.com>
Source record: 96451

So I just got my new Ameritron 811H amp today. Hooked it up, made the 10m mod per Ameritron instructions,etc. Now when I key up my transceiver in CW mode to tune up the amp I'm getting a noticeble electrical charge on my bencher key base!! What have I overlooked? I ran a ground strap to my ground rod from the amp, the transceiver is grounded, the antenna tuner is ground to the same ground rod, etc. I thought I had a common electrical ground here but now I'm not so sure. Do I need to run the grounds from each unit in series, i.e. ground strap from amp to transceiver to tuner to ground rod? As it is now each unit has it's own ground strap running to the ground rod. Do I need to tie my radio gear ground rod to the house ground?

I could use any advice to the clueless that anyone may have on this or a pointer to some technical resources to help me understand and answer my question.

thanks...

Don

> It is still a fact.

No, that is NOT "type Acceptance", that is "Part 15 compliance". You are still confusing 2 sets of completely different requirements.

Part 15 compliance among other things, makes sure that an electronic device does not emit an out of band signal strong enough to interfere with users of other services, as well as sets standards for spectral purity.

Type acceptance is an ADDITIONAL set of requirements that are specific to the radio service that the equipment is to be used on. In the case of CB radio, things like 40 channels, modulation control, power output etc. This is specific to the CB service. In order to be type accepted for CB, you can't, for example, have a radio with VFO frequency control, it has to be channelized and PLL controlled.

None of this applies to the Amatuer radio service. Hams are allowed to use VFO's because the HAM is responsible to know where the band edges are. The ham is allowed to adjust his power because he is supposed to know the limits and is responsible enough to adhere to the rules.

It is this technical competance, that allows the ARS to not require type accepted equipment.

I feel I *must* step in here. In my books, an SWL is every bit as much a ham as someone with a license that says they can transmit, and that is the traditional view too - not some modern-day liberal definition.

The traditional view has always been that a ham is someone who holds an amateur radio operators license. I have never heard of an swl'er being referred to as a ham. And that is not ment to put the swl'er down in any way.

In my last post I gave some bad information. Korea does NOT have separate Operator and Station licenses. They use a single license, just as USA does. However, I am told that negotiations are underway for license reciprocity with USA. Notwithstanding the negotiations, as of today, there is no reciprocity.
All that said, I am still leaving my 2m HT in the USA and not taking it to Korea next week.
Thanks again for the folks out there keeping my straight and properly informed.

KOREA (Rep. of) does require both Operator and Station licenses to operate
using his/her own callsign. or You will need the operator's license to operate a
club station(s).

Yes, at the moment no reciprocity with USA. (I could not operate when I was in
the USA, cannot fill that form 610 or something at that time due to no recp.)

Hello all,

I have Hewlett Packard 8410C/8412B/8411A opt. 018 Vector Network Analyzer systems for sale. These are late model, in excellent condition and are functionally checked and appear to be in calibration. There are no cables or accessories but I will include part of the operating section of the 8410B manual.

I have already sold several of these and could provide references to the condition of these units from happy customers.

I am asking $650 plus shipping which is about 1/10 of what Tucker sells them for. They are tested so it is not like buying at a flea market; you don't get a current calibration sticker though.

I also have some older 8410B/8412A/8411A which would be less expensive. I also have some that have cosmetic damage but are working and I would take less for one of these. Tell me what your are interested in.

If you get back to me quickly with a verbal commitment I can throw in a 8750A storage normalizer
tested but no interface cable.

Thanks for reading this.

902. Re: Equipment grounding

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-13 00:00:00 UTC
From: Matt Erickson <kk5dr@hotmail.com>
Message-ID: <3804B488.55C11CC3@hotmail.com>
Source record: 96476

A radio station ground exists for only 2 purposes, RFI/TVI, and electrical saftey.

Don't tie the station ground to the house wiring ground, there could be a ground fault, and you might get shocked.
The shortest, low inductance connection to a ground rod outside the station is the best. Heavy wire #8 or 6 , or copper strap an inch or two wide, a 1/16" thick will do.
A word of caution! dis-connect this ground when a storms comes, a lightening strike came enter the shack through it as easy as a coax connection(believe me, I found out the hard way). Also, dis-connect the AC power & coax when stroms are around.
The only time you need to have a ground hooked up, is when your operating.
When your not on the air, or listening, you should all ways dis-connect these items; AC power, coax, ground system, and any other wire connecting the station to the outside world.

Icom 27A, with HM-8 mic (not the original mic, never had it). Works
well as mobile or base rig, as well as 12/2400 packet.
Have manual and schematic for it as well. $100.00 firm.

Repy via email if interested to: w9vhe@earthlink.net.

908. Mobile HF RF amplifer?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-13 00:00:00 UTC
From: griffithj@my-deja.com
Message-ID: <7u2p5j$8vo$1@nnrp1.deja.com>
Source record: 96482

Are there some tried and proven HF solid state mobile amplifiers projects around that one can build form scratch. I know about the Motorola Application notes, but I am looking for a good workable project from an ARRL publication or other articles. Looking in the 200 to 300 watt range, I only run 50 watts with my TT scout. I also know about RF Electronics' amplifiers kits. I am trying to get away with a lot less money into the project. It's a project I'd like to do that would turn out good because the source was good. I only buy the ARRL Handbook every few years, could be a project in one that I would like to know about.

Any Information would help.
Thank You

From: NS1Z <ns1z@arrl.net>
Message-ID: <RN0EOPvP1fYqYF1QH0kn5Nlg9u2F@4ax.com>
Source record: 96488

If you wire your equipment in series (ground strap from amp to
transceiver to tuner to ground rod) that will encourage ground loops
due to the minute potential difference between each unit and ground
(due to the voltage [IR] drop across each section of ground strap).

What you have is the correct grounding when all units are hooked to
ground via a direct connection to the ground rod. Sounds like you
might have a problem with excess RF energy in the shack......

915. FS: Icom IC-765

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-13 00:00:00 UTC
From: Kevin <kpevin@mediaone.net>
Message-ID: <nf5N3.7572$1a1.372231@elnws01>
Source record: 96489

Hi All,

Just picked up another 'big' radio so its time to make some room on the desk.
Largest goes first so the 765 has to go. Anyhow this one is ser# 4647, it is an easy 9.7/10, very well taken care of. Only problem I have had is sometimes the ant tuner chatters on 15-10 meters on SSB TX. Sometimes it does it, sometimes it doesnt. I always use an external tuner so it never really affected me. The radio has ALL filters, both 250hz, 6khz AM and the stock 500hz filters. The 9mhz SSB
IF filter has been changed to a 2.8kHz (FL-70) which makes RX SSB audio sound great. MARS/CAP and PBT mod has been done. This really is a nice radio and still has the nicest receive I have heard on a HF transceiver so far. Heres how it goes.. The radio alone with the 6kHz AM filter, 850.00. Radio with both 250hz CW filters and AM filter, 1000.00. If you buy the radio with all the filters I'll throw in a MFJ 784B audio DSP that I used with this (great auto notch) for 50.00 with
all the cables. So thats 1050.00 for everything. All prices are plus shipping. I have the original double -box for the radio, the box for the speaker, owners manual and W7FG copy of the service manual for the 765.
I can e-mail you pictures if you wish. Its more than reasonably priced so if you ever wanted a loaded, clean 765, here is your chance. No trades except towards (+cash of course) an over serial number 1900 IC-756.

73,
Kevin

The only small mike I've owned from MFJ had lousy rx AUDIO!
the same size mike from 2 different radio manufacturers worked WAY better!
This seems to be one of those cases of "you get what you pay for"-the
construction was not quite as good either, btw.
If MFJ makes a larger mike, it may well be ok, but the small ones...forget
it!(Unless, of course, they have reworked them, which I doubt).
Other MFJ products I've seen/owned were ok though.

On the contrary, we've been asking the FCC to get active in enforcement again for many, many years. It's the hams themselves who've been providing much of the evidence against the lawbreakers in our bands. Believe me, we're not mad, we're ecstatic!

>when in reality many hams are CBers in hiding and are also contributing
>to the mess.

We don't call them "hams"; rather, they're CBers who happen to have an amateur license. Very big distinction between the two.

JCM, since you're responding to a post in r.r.cb, I assume you're
refering a CBer's shack. Hence:

Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Rule 26 - FCC Inspections
{A} If an authorized FCC representative requests to inspect your CB station,
you must make your CB station and records
available for inspection.
{B} A CB station includes all of the radio equipment you use.

another thing is i can not believe the van pulled up with out knowing what place
the signal was coming from if they was just checking around then i might believe
it. that is probably why they asked if they could look inside
if they had actually tracked the signal down to the vehicle then
they would have asked to see the transmitting station because they
would have already known that there was a transmitter in the vehicle
then you would have ben hit with a NAL for refusing to let them
inspect the station

>could have gone to a federal district judge and asked for
>a warrant to search.
they do not need a search warrant to see the station
they can,t force there way in because it has nothing to
do with a law
the spectrum is a public resource and the fcc has control
over the users of it
if you use it you must follow the rules
one of the rules is if you use it you must make the

station available for inspection
if you brake the rule you can and will be subject to fine
that is associated with the rule
the fine is a insensitive to you to let them see the station
once again
they can not forcefully enter you property but they can give
you the incentive to let them in
if you continue to be a butt and continue splattering all over the place
then they can get a warrant to shut you down but only as last resort
a rules of part 95 is like a contract if you brake the contract
you will be subject to the fines stated by the contract
just this contract is what you agree to when you use a cb

That is most correct, which has been my point for a long time. Reasonable search and seizure, that is what we are talking about. Hide the damn stuff and refuse them the ability to search and I think you will do well. I know that I am going to jail , before I acquiece to a search of my long nosed suburban, ...icm out ....

FA: Unbelievable UHF Saber III Secure Wideband Package!

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

A chance to get everything you need in one shot!

This package includes all of the following:

- Saber III H44QXK7139CN with the impossible to find 450-501 mhz split, in near mint condition, includes full keypad/LCD/secure capability;

- Almost new battery, excellent condition;

- Stubby UHF antenna;

- Rapid charger, as new condition;

- Saber III Enhanced convertacom, with display mike, amplified speaker and all wiring and brackets (good condition);

- RIB box with Saber programming cable (will even include a 386 computer with all you need to program, if you want);

- leather case; and

- extra whip antenna.

This is a once-in-a-lifetime chance to buy everything you've ever needed!

Take advantage of my retirement from the EMS business!

Covers FRS, public safety bands and will even cover all those new NYPD frequencies in the 482 mhz range!

942. Cross Field Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-14 00:00:00 UTC
From: gary.THrelfall@littlewoods.co.UK
Message-ID: <TFSJZNDI@littlewoods.co.uk>
Source record: 96359

Hi All,
Actually spoken to a couple to G stations who have bought
and erected a Hately Antenna Technology Crossed Field Loop.
These are supposed to cover Top-to-Ten.
It seems that these things aren't smoke and mirrors after all,
they both very happy with the results.
Mounted on short poles on top of their houses, they say received
signals are approx. 1-2 s-points down on an R7000 vertical but
transmit reports are the same on the higher bands but HIGHER on
the lower bands, they are amazed at these small antennas ability
to radiate on 160M and 80M, no high Q, no gigantic voltages
induced in nearby metal either.
The received signal figures are also deceptive, the signals may
be lower on the meter, but the background hash lower again, the
antenna also seems to have a null point on it, as one of the
stations used it to null out a small local factory unit that
had been plaguing him with arc-welding interference.

> I have used the Yaesu NC-50 for over 2 years charging my FNB-25M
> Nickel Metal Hydride battery with no after effects...

Sure, it works. But is it "right?"

NiMH cells come to us with a disadvantage over modern NiCads: We can only expect 60-80% of the number of discharge/charge cycles from NiMH cells versus modern NiCads.

That fact makes it very important to "treat" our NiMH cells properly. And using a charger created for NiCads is NOT the proper method to use.

A different charging algorithm is mandated...and "heat" must be taken into account when properly charging NiMH cells.

So...sure you can use a NiCad charger on NiMH cells - it will work. But it is not the proper manner in which to treat your NiMH cells. You will not enjoy the maximum life expectancy from your NiMH cells if you do so.

Does anybody out there have a Service Manual for an IFR 1000 Service Monitor with a serial number lower than 200 or so. I have an original one that I purchased but it is from a unit with a high number and many of the parts are different. Will gladly trade or will purchase the older unit manual. Will also be happy with copies of the different areas.
Please let me know if you can help via E-Mail. Thanks and 73's Don KB6GQA

I whole hearted agree alo Jeff!

Applause to the FCC enforcement efforts, both in the
ham bands and anywhere else in the spectrum that
is experiencing illegal activity.

Cheers,
Bill K2UNK

Sounds like there was enough probable cause to
detain him and get a valid search warrant. All
they'd need is the information you already said
provided a pointer to the van in question, and that
could then be backed up with a simple field
strength meter reading. It doesn't take rocket
science to get suffient proof.

Agree also. Here's a question.

I recieved an email on this topic from an individual that
stated for those services that do have type acceptance, the
FCC will, over time, drop the type acceptance approval
on older equipment? A time period mentioned was 25
years. If that is so, has the FCC then dropped the
Type Acceptance on various older CB equipment (e.g.
my old 23 channel Lafayette Radio CB unit)? If
such is the case, does that mean it would be
illegal to use that 23 channel CB unit today?

I'm rather doubtful of the existence of such a thing.
I've seen a lot of cb amps, most are vastly over-rated, in the manner of computer speakers labelled "350W" with a 2x2x1 inch wall wart for a power supply.
I've seen "500W" CB linears with 18 gage wire on the 12V power leads.
I suspect 50W is more like it.
I also know that 5W will work the world if the band is open and your station is properly built, and a kW won't get you anything if the band isn't open.

I've never seen a mobile kW for CB, in fact the last HAM mobile kw I saw was a major installation job, requiring major surgery to the charging system, and a lot of gear mounted in a spacious trunk.

I also know that BS is thicker on the CB bands that even the worst usenet groups.

In any case, if he's outputting more than 4W on AM, or running out of band, or using any modulation mode other than AM or SSB (with whatever the limit is there for power) then he is fair game for enforcement, and I will cheerfully help run him down.

The FCC's HF-DF capabilities are quite good these days though, and I suspect it's just a matter of when they make it down the list that far.

Mobile DF, from 100kHz through 2GHz at your service, with GPS, SSTV, and APRS.
Current location? Try http://www.aprs.net:8000/kc6ete-9

Haven't they been saying this for some 20 years now. Hell, they can't
control the crime rate what makes you think that they are going to drop
everything and go after illegal CB and HAM operators. I think not.

Why do what?

If you mean why use it now? I do so if a couple of friends
in my car club get together for a drive. We use the CBs
for car-to-car conversation. The 23 channel unit works
fine. I don't need or want a new one.

Cheers,
Bill K2UNK

Have:

Drake TR4Cw (not RIT) new finals, new driver, power supply, MS-4
recent alignment (actually on the bench now and about half way through
:-),
nice looking, ratty manual, does not have 'blue' dial, just the plain
old
original white. Will put photos up at
http://www.debris.org/radio/swaps/drake
but proably not until the weekend.

Swap for:

Drake TR7(A), power supply, PS-7. Plain old TR7 must have filters
of the 'A'
-or-
Signal One CX7, A, or B or later model Signal One (will take inop
on later model or kick in some bux if it's working)
-or-
apply as partial swap towards National NTX-30 if anyone has and
wants a TR4Cw badly.
-or-
SW-5
-or-
other pre-WW2 stuff I haven't had before
-or-
?????

-bob

The issue seems to be, does the FCC Field Inspector have a right to inspect
your station, against your will. The answer is, no he doesn't, on his own.
By the rules, you can lose you license by refusing to allow him to inspect, but he has no power to force an inspection on his own. What he can do, is bring a Federal Marshal with him and the Marshal DOES have arrest and search powers, and can if there is Probable Cause, enter and do a search for such stuff. On a Vessel the Coast Guard provides the enforcement arm for the FCC, and does have the power to board, search, and arrest. Been there, done that!!

Would that sorta be like a ham, spattering too much and therefore loosing his home? ANd no ham ever edged too close to the edge and may have just a tad slipped out of band trying to be the one noticed by a DX station. Felon, give up your home.

Has your 2100 not been putting out full power - 55 watts - since new? After multiple transmissions on high, does the power start dropping off? I have the answer, thanks to Chuck Lee, KB9SPN. Some 2100s have a poorly designed heat sink / capacitor combo from the factory. This is fully covered by the warranty. Chuck states his did this for awhile and then died altogether. Contact your dealer and arrange the repairs. Thanks Chuck! I never had an Icom rig that did not give me full power and consistently until now, so I knew something was wrong. Chuck's was purchased from and repaired by AES Milwaukee. Michael C. McCarty, WI4NDS.

They have similar ordinanes over in Glendale Arizona. The local police
got real tired of all the calls being directed at them because of a few
folks running extreme power and disturbing the neighbors peace.
In fact, one elderly gentleman sued the offending party for
interfering with his pace maker (this is actually what propted
the glendale city council to pass an ordinance allowing local
law enforcement to handle "low priority" federal problems).

Date: 1999-10-14 00:00:00 UTC
From: "George M. Winford" <gwinford@microgear.net>
Message-ID: <7u54c6kak1@news.asacomp.com>
Source record: 96386

This vintage PK232MBX has been used off and on since 1986. It has had every upgrade and option AEA ever offered for the PK232. I have the original manual plus the update instructions/features. I have the AC adapter. It has done RTTY, Amtor, Pactor and still would if I would let it.

Interesting to hear.

These antennas are now seeing some press for broadcast use. (isn't the new longwave station on the Isle of Man planning on using one?) They could be a *real* boon to longwave broadcasters, and to American mediumwave stations. (more than a few of which have gone dark when the land their antenna was on became more valuable than the station itself!)

: choice you are now on record as a amatuer station and must make your
: station available. So what you are saying I must let the FCC in my house
to
: check out my cordless phone. I don't think so.

While a 10KW amp in a mobile is possible, god is it asking
for trouble. Had they been able to ID this jerk, he would have
lost his equipment and paid huge fines. And the FCC still
could have gone to a federal district judge and asked for
a warrant to search. It sounded like they had enough for a
probable cause warrant.

Source record: 96248

Hello, from an estate, one unused Amperex 7378 , with new anode cap and corresponding ceramic Johnson socket, 70.00 delivered in USA.

The socket has a tiny crack in one corner, but a Ham friend says its AOK.

It is unboxed, and mounted for use..the owner died before completion of the project. Guaranteed. Also have HUGE cylindrical, almost foot-long 10 KW rated resistors from the same haul. Am not that far into it yet, but have lots more tubes and accessories from the era...

Please respond privately...

Thank you,
Joe Pratt, Tubecntral@aol.com

Source record: 96250

Mike: this may help a little. We rent various vehicles around the world to use for RF noise location efforts. Here are some observations:
There is no consistency model to model or year to year. Ford Escorts were very quiet in the early 90s, but are terrible now. As you experienced, the Tempo and the Taurus are bad news. There were a couple of years of Chrysler vehicles which were very quiet, but have no info on the 99 or 00 models. One of their engines had spark plug wires less than 6 inches long and it was pretty quiet. Toyota builds a Diesel available only in Japan which is fantastic, but, alas, not available here. Same for Pugeot diesels which are available in Europe. And, as I said, there is a lot of variation between copies of the same model. BTW, the Chrysler stuff tends to have a CW birdie on 146.52, which is a bummer for hamming, but not for our requirements. And, all diesels are not quiet. Some of the injector pumps make more noise than the spark plugs on a gasoline engine.
My advice? Look at some which are acceptable on other basis, and narrow the field to a reasonable number. Take an AM or SSB radio to the car rental place and rent one and another for long enough to get it out on the road and listen.

If thats the word you like to use Outlaw that is fine, but again shows how off the shelf some of the FCC laws really are, a law enforcement officer that goes around catching rapist,drug dealers ,mobsters,scam artist, murderers, child pornographers , pedophiles, these are the real criminals that need attention not someone talking on a cb radio with 1000 watts, I guess if you ever drive over the speed limit which I am sure you do /done I guess we'll call you a Outlaw driver

They didn't see any radio equipment, only an antenna. An antenna is NOT
evidence that radio gear is present. Now, if they had signal strength
readings from the vehicle - then they would have evidence. They would
then have the right to ask to inspect the equipment.

2nd post. no response to the first.
Hi -
I have a KAM Plus 8.2. I am not happy with the DCD on the HF modes.
On teletype/Amtor FEC I get hash between sigs. even though I have tried

both positions on the AM/FM switch. I can run squelch but then I have to

follow the sig. up and down.
I have emailed Kantronics with the question and they say to push the
AM/FM button in and this should take care of it. It reduces it but it
still comes up with random letters from the white noise. THey have been
of no further help.

I had sold my PK-232MBX to pick up this fine piece of crap. With the
knob I could adjust the DCD on the PK-232 to the level I wanted.

I like the fact that the KAM is dual port and would like to make it
work. If I can I guess I should look to a HAL unit??
Has anybody tried the new Timewave version of the PK-232DSP??
opinions are OK.
Thank You.

I have an Icom 781 that would make a great rig for someone technically inclined that could fix it up for themselves. Its in great shape but when I push the switch to turn it on..it will not turn on. Checked the fuse and its okay. I don;t want to put any money into this rig as I now live in an apartment and can't use it. The rig worked fine up until the no power problem, The only other cosmetic defect is that I used the wrong cleaning solution to clean the small knobs on the front. It faded them but I guess you could get new ones or paint them. I am taking best offer. please e-mail me at n8fcf@airmail.net
I also have the sm-20 mic and the external speaker with built in filters. serious inquiries only. Anything below a four digit price will not be accepted. This a serious rig and receives and performs as well as a dsp rig in my opinion. friends of mine have done comparison tests.

Hello,

Check out http://hfradio.org - a site with many resources for Shortwave Radio and Utility Listeners, Ham Radio Hobbiests, and others who might be interested in this type of content.

So, come on by and check out my non-commercial SWLing/Ham Radio website. The URL is http://hfradio.org and features DX information, including QSL Route/Manager Lookups and Callbook Lookups; a Propagation Center including my eAlert service (allows you to sign up with your email address. Then the eAlert system will send you email propagation reports. I use this with my pager.); Equidistant Azimuth Map software (allows you to create maps of any QTH); Swap and Shop; Bookstore (I've hand-picked over a thousand book titles on radio, etc.); Free website space for YOU to create your own Ham or SWL site, and there's more. Easy to navigate. Open for suggestions.

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

Hi all;

Once in a very rare while I sell off equipment that just isn't being used. If you knew me, you'd know that EVERYTHING I own is absolutely functional, clean, and kept in a non-smoking, humidity controlled environment.

Here's the list, get it while you can...

Timewave DSP-59+ digital signal processor, with version 3.0 firmware. Like new, no marks, amazing abilities. Includes manual and wall wort power suppy (normally an extra cost item): $145. Really pulls them out of the "mud"; great for voice, CW and DATA..

TR-44 rotator with control box, mast mount and manual. The rotor is just back from the Rotor Doctor, it's been fully refurbed, lubed, cleaned, repainted and checked out; it looks new. $115 or BRO.

Heath SB614 Station Monitor, clean, fully operational, well built, looks and works virtually like new. This is a sweet monitor, with a nice bright trace, and plenty of controls. A steal at $145, includes good copy of manual.

Heath SA 2060 Legal Limit Antenna Tuner. This is Heath's "top-of-the-line" tuner, and one look inside will tell you why. Well built, like new, no scratches, works perfectly. Dual-meters, easy to adjust, supports coax, ladder-line, and end-fed antennas. Includes manual. $195 or BRO.

All of the equipment is guaranteed to be as described, you have my word of honor. I prefer postal Money Orders or Certified or Bank Checks, I ship same day via UPS. I'll split the shipping with you.

Thanks, and I look forward to hearing from you!

I don't know how long you expect the battery to last but two years with 14 to 18 hours of daily use every day and still going strong is not bad in my book. I have used Motorola batteries professonally and never got that kind of life!

While we are at this lets get into the slow vs fast charger. Professionally I always was given a slow charger I always had battery problems with working double shifts and quick turn around the battery only received a good charge on my day off.
Personally I have always used a fast charger and have been very happy the battery life has been better then the professional used battery with the same amount of use. I will never use a slow charge again. I am now retired but if I was to use HT professional again I will demand a fast charger. And will able to show the increased life and usage of the battery.

What enforcement efforts? Like maybe 10 whopping seizures or
something in the last year? All I know if is riley hollingsworth
harrasing hams with letters, most of them not commiting a crime. I
love the smokescreen that the ARRL puts out in all its publications
telling you that the FCC is actually doing something- the reality of
this stuff is it's a bunch of "fud".

As an amateur operator, you should be pissed off at the LACK OF
ENFORCEMENT that is present on the amateur bands.

I don't understand this- All these hams "side" with the FCC when, on
the flip side of the coin they're constantly getting ready to sell off
amateur bands.(to make their balance sheet bear plus signs) Is that
an organization you can approve of?

Whatever happened to self enforcement/policing?

It's a hell of a lot easier to have 20 cars in front of the guys house
where the repeater jammer is in instead of waiting for the FCC to
do something. (eternity) and usually the guy will stop doing
it.

-Mike

1019. Re: New RS 10m rig - Any experiences with this rig

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-15 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <38092b81.322064734@news2.ziplink.net>
Source record: 96320

Yeah, I cant believe why folks are whining about this either.. For
those hams without big wallets, this radio is probably nice for the
conditions that exist on 10M now and will continue for
quite some time.

A modification with a 10 turns potentiometer of the same value as the
one in the unit would make the clarifier track very smoothly on TX and

RX, and if it the clar does RX only it is a simple modification to get
it to do both. Just look for the mod for the "cb version" of the
radio.

1021. "RF Friendly" Vehicles.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-15 00:00:00 UTC
From: drgrant@ziplink.net
Message-ID: <380a2c80.322319871@news2.ziplink.net>
Source record: 96322

Anyone here know of any vehicles that are around that are
great in terms of RF? (meaning no problems due to RFI or EMC)
issues....

Reason I mention this is I notice several import vehicles have very
little if no noise generation while the american cars are extremely
noisy. I have a friend with a toyota tacoma pickup with an
ic706mkII installed in it.... the noise level is so low in that
vehicle that he does not have to use the noise blanker. I want to
find other vehicles that do this. Another friend says that his VW
jetta doesnt spew off lots of noise, he says not even the windshield
wipers or blowers make noise.

My goal is basically, to get a radio friendly sedan, wagon, or a
van. Can be import or american. First and foremost
consideration is the noise the vehicle generates itself, and then
EMC, and then teritary concern is the capabilities of the electrical
system. (is the alternator good size or is it really too small to
begin with?)

My dilemma is I currently own an 89 ford tempo and I am sick of
the noise it generates on my HF/VHF/UHF equipment, scanners,
etc. And I want to avoid having to modify the car to get it to
"behave" well. I've done a bunch of procedures already
to no avail. (bonding, changing plugs, etc) so I'd rather just
dodge the problem by getting a car that's not noisy to begin
with.

New and used reccomendations are fine too, if new I'd like the
thing to be at or under the $25,000 price level.

Any feedback I get would be greatly appreciated. Post and
email your responses.

There is / was a rule that you can no longer sell the 23 channel CB
radio. I believe this applied to all, even used radios. Not sure use
of the 23 channel radio was prohibited though.

Amateur transmitters only need to comply with the technical standards
of Part 97. Where the amateur receiver that operates above 30 MHz is
Type Certified to comply with FCC Part 15, generally under the
scanning receiver provisions. Have a look at www.fcc.gov/oet FCC ID
Search (Equipment Authorization) Look up your radios FCC ID number
and you can actually print out the Type certification form issued for
the radio. You will also see under what rules it was approved.

No Amateur HF transceiver carries an FCC ID Number unless it can receive above 30 MHz. Manufacturers do have to notify the FCC how many Amateur HF transceivers are being imported into the US.

Amateur linear amplifiers that operate below 30 MHz are Type Accepted, basically makes sure they do not function in the 24 to 30 Mhz range out of the box.

1035. First Look: MAGNUM 257/ HTX-10 10M Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-15 00:00:00 UTC
From: advanspec@aol.comburger
Message-ID: <19991015141019.00353.00000007@ng-fm1.aol.com>
Source record: 96336

We were just sent from RF Limited/Magnum an advance evaluation model of their new 10M radio the Magnum 257. This radio will also be sold as the Radio Shack HTX-10 with some minor differences. Here's some first impressions:

This radio's "outer shell" has been floating around for a couple of years as both a cb (R/S TRC-485) and various "export rigs" (Eagle, Pro-something ect). The older rigs were "locked" into 10Kc "channel steps" and bands while this radio has full frequency control similar to a RCI-2950/ Uniden 2510. It is NOT built by UNIDEN, Maxon or Ranger. It also has "split frequency" capability. The radio is small though, about the size of a Cobra 25. The "fit & finish" is impressive. There are 2 good looking heat sinks on the back, one for the dual 1969 finals, one for the power regulator, separated by the antenna jack & power cord. The power cord on the Magnum, by the way, is the crossed 2 pin molex type, like found on most 2M radios. There is no CW mode. Our test Unit did not have a serial # . Output is 25W SSB AND FM, 7w AM dead key out of the box. The Magnum is able to be "modded" for 11 Meter "export use", The R/S Htx-10 is not. One complaint about the "earlier" versions of the rig was that those didn't have good AM "swing". This seems to have been fixed in the Magnum as we were able to easily adjust it for 20 - 30W peaks on AM without "ripping" any components out. SSB was over 35W PEP with a simple internal adjustment. DISLIKES: Mike is a 6 pin w/up-down controls, which is ok, but it does not match the wiring of all the current 6 pin 10M radios being sold (Ranger, galaxy ect) Why the hell not?? Also NO wiring pin-out info was in the owners manual for this new unique mic socket, also why the hell not?? Perhaps an "addendum sheet" can be included with the radios, should be no big deal to do. The output power is not front panel adjustable like it is on the 2950/Lincoln.
Overall the Magnum seems like a great 10M radio that should retail below the price of the 2950's & Lincolns. The non-modifyable HTX-10 (which i have not seen first hand yet) should be even less expensive! Look for a full review of the Magnum in an upcoming issue of National Communications.....John

1037. Help: Heathkit Warrior Amplifier HA-10

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-15 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38076EEF.806BFDAC@yahoo.com>
Source record: 96338
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi,
I have a heathkit HA-10 warrrior amplifier. This is the 4x811A amp that is rated
at 1KW input.

Amp works great. Even been nicely modified for low power tr switching (no high voltage
for the newer solid state stuff.

Quesiton: any ALC for this amplifier to prevent over driving and flat topping, or, should
I just watch maximum output via a scope instead?

Problem: the high voltage transformer doesn't seem to "know the words" -- you know -- it hums alot. And, the higher the output power, the louder the hum/buzz. Almost sounds like a vibration. Is this a simple "tighten the transformer down" or could I be looking for a new high voltage transformer soon?

I'm getting about 1920 volts at 114 AC volts input.

Power output is as high as 700 watts on 80 meters, down to about 620 watts on 10 meters with
100 watts of drive. 25 watts of drive gives an easy 400W pep, so think it's working OK. I guess it runs in grounded grid config.???

I actually bought this thing to work on 10M AM -- driven by an old Drake TR-4 in controlled carrier AM mode.

The amp itself is a beautiful piece of gear. Heavy duty. All copper outer chassis. Shiney
chrome knobs. 80 thru 10 meters (bet it would even work on six).

Looking for suggestions to fix the noisy transformer, and any other tips on things like making a tuned input or other ideas. Also, opinions on the cost-per-watt -- what's current going rate? . Is it a decent amp?

Thanks.
Joe

Hi All,

I have 6 Transcrypt secure boards, I believe they are the SC20-400 or similar. This is thier low tier unit, specifically set up for the GP300 radio, but can be used with any radio, all you need to do is contact Transcrypt, and they can either do it for you, or provide the instruction and schematic to do it for yourself. These units can be used through all repeaters, even using PL decode and encode, perfect for any small bussiness that needs to keep the competition from listening in on thier conversations. I am Looking for $70.00 each, OBO, but I will certainly do better if you purchase all of them. Please reply VIA E-Mail.

Thanx

Celwave TDN7407 duplexer used by Motorola. This is the same duplexer found on R100, GR300/500 and GR1225 repeaters. Small 6 cavity mobile type duplexer with N connectors. Will handle up to 50 watts RF.

Will tune down to the 444 MHz ham freqs and up to 470 MHz. I can have this duplexer tuned to your freqs too.

$ 195.00

Hello to the list.
I have a Transceiver Holandes model
3030/GRC. with source to 220 volts,
AM/CW with filter of cw of 500 Hz.
Telefono, original leg Manipulator and
loudspeaker.
Equipment totally to valvulas, final step "807"
with BVO for excellent SSB, I can order
photos of the equipment to who this party.
I desearia to change this equipment, by a
Receiving type "Collins",Hammarlund,National,
or ' Allicrafter.
and tambien serious possible change by offers of
other type of Radio material.
And tambien I am interested in the purchase
of the accessories for the Transceiver Collins-618S-1
Accessory power suply 416w-1
oar you control unit 614-D-1 or ' D-2
oar you control unit 614C-2
and 144 crystals of the transceiver 618S-1 that I possess
the one which DOES NOT has the crystals, or in their/its/your/his defect a
generating of RF that it substitute to the crystals of said
transceiver 618S-1.
If Vd have these accessories for 618S-1
agradeceria they are put in touch with me
indicating price of the accessories.

Look at diesel powered vehicles for the lowest RFI. The Fords have a bad rep for fuel pump RFI. The fuel pump is buried in the tank and the factory fix requires removal of the pump. Check Deja News for extensive coverage on this issue. Lastly, when you think you have found the vehicle you like, try renting one for a day or so to see how you and your radios like it.

I have a TS-140 as my back-up rig. It is pretty solid and a good performer....the slide pots on the right tend to get sticky, and need to be nudged or cleaned occassionally, as does the memory dial/switch. These are the only "typical", well-documented problems with the rig. I especially like the programable memory band ranges (you set the upper and lower limits and can qsy to your hearts content.) I am not familair with the icom.

Ben, go to the AC6V ham radio master index.

http://www.ac6v.com/pageas.html

go to manufacturers, go to antennas, click on Larsen, their web page is poor,
so send them an e-mail.

Save/bookmark the master index for future reference.

Good luck,
Brian

With all due respect to HCJB if they made the same claims as you
have paraphrased they clearly have failed to check their facts. The
whole thing doesn't sound right technologically anyhow. You sure
they weren't talking about bandwidths varying from 3-30 MHz wide?

It is illegal for anyone to broadcast a signal that interferes with other
communications. Just imagine the class action lawsuit Hams will have
against any company that causes such illegal interference ... we could
fund all sorts of charitable Ham-related activities!

There are International treaties and US laws that would be breached
by any such interference ... and guess what, Ham signals are just as
likely to foul their systems ... unless they are very well shielded ...
thus protecting us from them as they protect themselves against us.

Let's not panic, let's get some facts. I am guessing they were talking
about bandwidth rather than bands. Once we know more we can discuss
a strategy to respond effectively, if at all. If we have a challenge before
us we need to remember that it is amazing how QRO on the air and
through the political process can get people's attention!

Source record: 96269

I don't know the TS-140S but I do know the ICOM unit. I owned one for years and just sold it, with some misgivings.

The ICOM is a sweet little rig that does a commendable job. It's bottom of the line, so has no VOX or RF gain control or passband tuning, the only things I wished it had. I put in a 500 HZ CW filter with excellent results. Oh, and no speech processing but I didn't miss it. Hey, it's a cheapie and worth every penny!

The only nit picking complaints I can invent are:

1. Frequency accuracy. It uses some strange algorithm to set the frequency and thus has some inherent error. This only amounts to about 40 Hz dial error anywhere in the range; this is comparable to the drift of the main crystal and most people wouldn't notice it.

2. S meter accuracy. The S meter is okay for strong signals but drops too quickly as the signal gets weaker. Signals that should read S6 read about S3 and you can copy signals easily that don't move the meter. There is no remedy for this; I studied the diagram for a long time to look.

Let me know which you get, and how you like it.

73, Bob K6DDX

>I have a VX-1R that transmits 2.7 kc's off frequency
>on the uhf band only. The 2 meter band seems to be
>ok.

Are you sure 2m is exactly on frequency? If the master oscillator in the radio is 6 PPM off frequency, 70 cm frequencies will all be off by about 2.7 kHz, and 2 m frequencies will be off by about 900 Hz.

If that's your problem, there is likely a trimmer capacitor somewhere in the radio, probably near the oscillator crystal, that might be able to adjust the frequency back to almost exactly right.

I don't know about the VX-1, but the FT-50's transmit frequency tolerance is +-5 PPM on UHF, so your unit is only barely outside that limit.

Dave

WRONG! AES pulled a bait and switch on you. I called also and they said the price was $1350 and they can't be held responsible for typos. At least it was not a toll call. Hey I got an idea. Everyone reading this post should call AES and ask for the price of the FT-100 an squack when they find out that AES wants more $$$.
The bait and switch trick works or guys who were just about to order the radio and then just pay the higher price. How about if AES pays for all the TOLL FREE calls and then calculates how much $$ they are losing. Then they will think twice before placing a Fake price used to lure in Hams to pay more $$.
take care, Steve

My 706MKII has the same problem, but I checked it using an H.P.
communications
analyzer. The CTCSS is within the specs (between 5 and 10% of the
deviation).
There's no adjustment just a resistor divider network that drops the
level
before it enters the transmit audio circuits.

I had listed this a few weeks back, but the person who expressed interest did not send off payment, so I am relisting it once again. Tnx.

==========

I have a Icom 756 transceiver in like new condition for sale. Unit comes complete with original box, manual, schematic, and other paperwork. Has always been used inside ham shack, and kept covered when not in use. Was used as backup transceiver. Has the Icom MARS/CAP mod professinally installed and documented. This is a outstanding receiver offering a bult-in tuner, DSP, Auto-notch, and graphic display. Unit works and looks like new. $1475, and I will pay UPS shipping and insurance to anywhere in the US mainland.

Hi,
Looking for comments, good, bad, ugly on the Ameritron Solid State
no-tune desktop linear amplifier.

Is this an OK amplifier?
What is the going rate on the used market?
Can it do CW full break-in QSK?
What is the real output power on, say, 20 meters (not the hype that
Ameritron claims, but the real numbers)?

How similar is it to the Icom IC-2KL
How similar is it to the TenTec solid state amp

and finally, I thought there was an amp reflector. Any idea where?

thanks,
Joe

What a strange pair of sites! After looking at the hutton site, I still don't know what they do or offer. Having half their text in pale yellow on white didn't help. At Tessco, they want your life history before you can even look something up. And then they didn't have the antenna in the 2 meter model :(

Hi Joe,

I've been using an ALS-600 for about 6 months now and like it very
well. I'm using it with an Icom 746. It does full QSK on CW no
problem. The output power is very close to claimed specs on all bands,
with variations depending on drive, load, etc. (as you might expect).
It does not tolerate SWRs above about 2:1 very well (generates a load
fault), so you may need a tuner to use with it.

I rate it a good buy for the money.

73,

Marv

Artur,

To me, the most important difference is that the W32A can do dual receive simultaneously (U/U, V/V and V/U) if I remember correctly. This is great because you can monitor two frequencies at one time (even in the same band). Also has separate vol/sq control for the the two bands. I used to own a W32A and it is a great and solid radio. Would be good for a starter.

Good luck.

Artur Leung wrote in message <380B220C.939B5B3C@ittc.ukans.edu.NOSPAM>...
Hi,

I am about to get my ham radio license in a month or two, and am searching for a 2m/70cm HT. Went to Icom's web site and found these two models: IC-W32A and IC-T7H. By looking at the spec., it seems to me there is not much difference..... could somebody please explain to me what the difference is between the two models? Which one do you recommend? Thanks.

Has anyone had any first-hand experience with the new 2m (HTX-200) and 70cm (HTX-400) handhelds listed in the latest Radio Shack (2000) catalog? My wife and I are thinking of getting them because of their size, plus of course the price looks pretty good: $179 for the 2m rig, or $199 for the 70cm model.

Downside seems to be that they only take AA batteries -- will it accept rechargeable ones? -- and that there is no DTMF pad. How do you enter in frequencies, just spin the dial and hit "store?"

Not quite 100%, I think! In the US, single band (ie 10/11m) COMMERCIAL
PAs should not sold by dealers, but you can modify, roll your own, etc,
and can modify any kind of rig you lay hands on. In the UK we can
definitely not have any dealings with non-approved CB sets, and even the
importation and commercial maufacturing of 'genuine' 10m sets is banned,
even if they are intended purely for amateur radio. If we do happen to
have an 'illegal' set (of whatever variety), we have to obtain a special
dispensation. This is dealt within 'Clause aa' in the UK amateur
licence. However, I CAN build my own non-commercial 10m-only set, even

if I use all the parts from a 'scrap' illegal set, or legally I can buy
a rig which covers DC to blue light (but not just 10m). Strange but
true???? True, I'm afraid!

Well, I haven't played with one, but just this morning a friend I
haven't
talked to in a few months broke in on a repeater. His wife had just
picked up the 2M HT last week as a gift for him.

From the receive end, I have to say it sounded pretty good. Audio
was crisp, and loud! In addition, it didn't have that characteristic
that the HTX-202 had that when you weren't talking it grabbed the
internal audio gain and wrapped it up to the max, making every
single noise around you go booming out on the air. As much as I
like my HTX-202, I am fully aware of that feature and just can't
run the thing in a car with the windows open on the highway without
a noise canceling mic.

Bob,

In my opinion the IC 707 and the FT 840 are low cost start up rigs... They are also
physically larger than the TS-50S and the DX-70.... I have never seen a DX-77 so can't comment on size.

The TS-50S appears to be a fine performing radio. However it does not allow front panel separation. Expect to pay $550 and up for a used one.

I have an Alinco DX-70 (100 watts HF, 10 watts 6 meters) in my car, with the control head separate from the rig and really love the rig. I bought the radio new, not including the separation module, as part of a close out from Tech America at $599 and it was worth every penny.

Any one else with comments?

Dave WB2FTX

Well, I guess that confirms that they didn't fix this
problem. This has been in all the 706s. The worst part
is that it is NOT adjustable (requires SMT soldering to mod it at all)
so theres not even a chance in hell of turning it down.

>> or $199 for the 70cm model....."
I have to agree w/the other guy, you could get the dual band Icom q7 or
the even smaller dual band Alinco C5T (which includes batt & chgr) for around
the same price, or if you really want just a small 2M ht that runs on a couple
of "aa" batts you could get the Alinco S11T for almost HALF the price of the
HTX-200! $180 is the price of a current HIGH end 5W full feature with full
Keypad 2M HT nowadays, all of which will INCLUDE the batt & chgr, and may of
which are pretty compact for 5W units as well. The way overpriced HTX-200 will
only be a good value if (when) it drops below $99 on sale or discontinued
closeout.

Tim as you know the HF6V has no traps. I used the R7 and it is loaded with traps and you have to start tuning with 10m, then 20m, etc and if any one of them is 'out' then you cannot tune the antenna beyond that point. I am therefor leery of any thing with traps. The coils on the HF6V are much simpler to work with.

Please respond privately to rolandman1@aol.com and not this posting email address or newsgroup.

Hi, I am looking for old electronic musical equipment from 1950-1990, in any condition, working or not:

-SYNTHESIZERS, keyboards
-Drum Machines
-Effects Processors
-Vocoders
-Sequencers
-Any old patchable modular or analog synthesizer
-MIDI gear

Especially interested in older and more unusual stuff. Anything that makes bizarre sounds. The more knobs, sliders or other controls, the better.

MOOG, ARP, Roland, Korg, Oberheim, Sequential Circuits, anything similar.

For a better idea of what Im looking for, please visit:
http://members.aol.com/rolandman1/index2.html

Please respond privately to rolandman1@aol.com (and not this posting address) with price and condition. Include phone number and location as well if you'd like. Thanks in advance.

Voyetra Eight polyphonic synthesizer module
Oscar with or without MIDI
PPG Wave 2.3
Yamaha TG77 Tone Generator
Casio VZ-10m Professional Digital Synthesizer
Roland System-700

Sent via Deja.com http://www.deja.com/
Before you buy.

Celwave TDN7407 duplexer used by Motorola. This is the same duplexer found on R100, GR300/500 and GR1225 repeaters. Small 6 cavity mobile type duplexer with N connectors. Will handle up to 50 watts RF.

Will tune down to the 444 MHz ham freqs and up to 470 MHz. I can have this duplexer tuned to your freqs too.

$ 195.00

Please reply via e-mail

i work in a warehouse that ships our product world wide by truck only to boat docks, across continental / national boarders etc.
you'd be suprized at some of the junk radios that these truckers hook up to these "10kw" antennas.
the antennas cost more than the radio did new and most don't even OWN an amp.
if i had a swastica flag hanging from my front door, it wouldn't mean that any illegal activities were going on inside.
some of these truckers care more about the looks of there trucks than they care about their onw health.
there is no law against vanity run wild and i seriously doubt that any federal judge would risk looking foolish by issuing a warrant to bust a 2 watt junker just on the looks of an antenna and yes the fcc does need field strength readings, key signature or voice prints to back their case.
otherwise there could be laws made for being ugly which would be the case here.
a 7 foot firestick can easily handle 1.5kw but is this justification for the inconvienance of a search?
i don't think that would hold up on an appeal. worse things have gotten by on this technicality.
worse yet, if it didn't hold up, the fcc would be open for a malicious prosecution suit.
they can't afford to do their jobs now let alone defend a suit over an "ugly" antenna.
think about it.
jeff

drgrant@ziplink.net wrote:

>
> Whatever happened to self enforcement/policing?

You can only enforce YOURSELF! Thats why they call it "self"
enforcement. I have no need to "play" policeman.
Good way to get shot also. I'd like to see 20 goofballs hanging around
my house... They wouldn't last too long before a "real" policeman was
asking them what their problem was.
>
> It's a hell of a lot easier to have 20 cars in front of the guys house
> where the repeater jammer is in instead of waiting for the FCC to
> do something. (eternity) and usually the guy will stop doing
> it.

But what are you going to do after you get there? Been there , done
that...Big waste of time, unless you "also" want to break the law to IE:
kick his butt, stick pins in his coax, cut the power lines, etc. Yea,
usually they will stop, until 5 min after you drive off. And then they
are laughing on the radio at the "enforcement" that was meated out. As a
ham that has put up with squirrels for 4-5 years straight on the local
repeater, I can assure you I am well versed in all these scenarios. What
happened in our case? The squirrels did as they damn well pleased for 5
years until finally this year the FCC took a big bite out of their ass.
Even caught one in his car talking. I think I'll wait for the FCC to
show up. At least I know something will be done by the time they leave.
And trust me, the squirrels didn't get back on the repeater to laugh at
the FCC after they left. But everyone on the repeater sure got a kick
out of knowing they were in the process of losing tickets, or getting
multi thousand dollar NAL's. It was only eternity before the FCC
crackdown. After, the FCC came out and said, GO AHEAD, MAKE MY DAY! MK

There are trunking scanners available in Australia already. Several dealers in Sydney are stocking them at the moment. You are looking at around the $600 mark for the 245xlt. Though be quick as they are selling like hotcakes, and they run out of stiock very quickly.

Dave

HAMFEST October 24, 1999 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 24, 1999

LINDENHURST, LI - NY

On October 24, 1999 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Peter Portanova WB2OQQ at 516 541-4886 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst. For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 PM following the Newsline Report on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Looking for a manual for a Heath DX-40 transmitter.
Clean photocopy is fine. I will pay postage.

Yes, I know I can buy manuals from HI, W7FG, Ray
Sarrio, and many others. I was hoping one of my
fellow hams would help me out with a copy (like
I've done DOZENS of times with my manuals!).

73,
Dean / K5DH

Not true. As American HAMs we can modify all day long. Once we
modify there is no difference than if we started with a bag of parts
and built. That goes for both rigs and external amps.

There ARE rules about amps, however, that must be adhered to.
We can build them, but we have to be careful about selling them.
And I'm not going to spout on the details of those rules.

The only caveat is that if we modify a CB, it's 100% legal for us
to use as HAM equipment, but it is NO LONGER A CB, and
using it as such technically I suppose would be no different
than if we built a CB from scratch with extended capabilities
and used used it.

A fine point? Maybe, but the bottom line is you were totally
wrong about US rules and regs.

Mike

The Icom 706 Mark III will debut next year.
It has 1.2 GHZ at 10 watts plus a color display. Mo mods because the radio has not been released into production. I was told this radio is to compete with the Yaesu FT-100. No other details .

Thanks for the info. The feedback I'm getting is overwhelmingly
negative re: price vs. value, and lack of accessories; scuttlebutt is
that the ICOM Q7 is about the same price and has dual-band plus a wider
band for receive. Might give the RS rigs a pass if that's the case.
Gotta make a run up to HRO and check it out....

Seems to be pretty unanimous that the price vs. value is a major down-
side on this radio. Thanks for the info.

Wow, FIVE watts for the money? Granted, power in the LA and Orange
County area is not that big of a deal, what with all the repeater
coverage, but still it's nice to have the extra power when we go camping
or whatever. I'll have to give the Yaesu rigs a look-see. Thanks for
the info.

Thanks for the info, Mike. No CW, though, that's a down side indeed.
Yes, it should be easy enough to add, BUT when you do stuff like that RS
considers it to have voided the warranty. That's disappointing that
they omitted CW....

If you want to make it much better radio, do the Inrad filter modification, replacing stock crumy filters with 2.1 kHz Inrad filters. Big improvement and also DSP works much better.
Check info on my page http://members.aol.com/ve3bmv/

Great radio after the mods!

I'm quoting from my IC-746 Manual:

The IC-746's DSP digitally transposes receive audio components
in all modes of operation, to produce desired AF frequency
characteristics
at the IF stage of the transceiver. DSP provides the following
functions:

Noise Reduction -- reduces various types of noise and enhances
received signal components
only.

Automatic Notch Filter -- automatically reduces single beat
interference and protects the
received voise signals.

Selectable APF -- a total of 3 passband widths are selectable for
super-
narrow filter functions in CW
mode. Plus, the APF
center frequency is
adjustable.

It claims to do all this in the IF stages. The IC-756 has more of the
same
and I think the IC-706 has some of it, also

Good luck

Tony -- KF3BX

1141. Icom 761

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-19 00:00:00 UTC
From: Lloyd Smith <Lloyd@Primenet.com>
Message-ID: <7uj76u$j15$1@nnrp03.primenet.com>
Source record: 96106

I have a Icom 761 with a slight problem.
Normally when you turn on you hear sound first then a slight click and the display will light. All is fine.
Sometimes you do not hear the click and the S meter pegs to the right side.
No audio and no display.
You can tap the top front hear the click and unit will work fine.
Other times radio will be on for a period of time and the display will show weird numbers. Audio will be fine.
Some times in this condition can tune and display will come back and read correctly.
I think there is a relay in there some where but can't find.
Any help would be appreciated.
Thanks
W7GBX

From: ANTONIO OCHOA JR <iartc@worldnet.att.net>
Message-ID: <7uj80llef1@bgtnsc02.worldnet.att.net>
Source record: 96108

I have a GE Phoenix SX radio that I bid and purchased. I would like to convert it to either 2meter or 440. The radio is obviously programmable but how I am not sure. Does anyone have any info on this radio and/or how I can get info on it?? ps. I picked it up for a dollar so it wasn't a big loss. The dtmf mike alone is worth that. Thanx! de kc5ktm. 73

I had only modest problems with noise suppression on a 1996 Subaru Outback. For more info on noise suppression, check my website below.

For those who are interested in information on HF mobile noise suppression, I suggest that you check my web site below. This article was first published in the Mobile Amateur Radio Awards Club newsletter. I also have information on my nine-band three-antenna HF mobile installaion.

http://www.qsl.net/ka0dxm

If you do not have WWW access, or if you have questions, drop me a line and I will try to help.

Hello All!

We don't need little LEOs,or greedy telecomm companies to hack away at 'our' bands. We're doing it to ourselves!

Just got the latest Ramsey catalog...naturally its still full of ATV stuff on 439.25 and 911.25...no surprise there...but what's this on page 15?

'Wireless RF Link Modules' on the 433 MHz LICENSE FREE BAND!!!!!!!!!!!!!!!!!!!!!!!!!

+10DbM output...hell,that's more than my transverter before the amp!

Hey...I kind of like Ramsey...I've built many of their kits, and they.ve always worked well...but come on!

OK. off my soapbox.

Guess again. I have personally argued the jurisdiction point with two city attorneys and the the District Attorney when a local judge signed a search warrant on a Ham and CB operator, which fell on deaf ears. All they said was "Hey, the judge signed it, it is legal." And "The F.C.C. has abdicated authority to the local officials." Local police in Green Bay WI, without the F.C.C. or Federal Marshall executed the warrant. All because a local alderman with help from a willing Detective Police Sergant wanted that person out of the neighborhood.
The police confiscated ham gear, CB radios, and even a personal stereo. None were returned. It wasn't until a few choice words (Lawsuit agains the City with apprpriate media coverage) were said to the then Mayor at lunch with his cronies did the harassment stop.

Antonio,

That radio is eprom programmable. Takes a special piece of equipment to program. But the SX model is really wide banded, something like 400-520Mhz. I have several on 9600 baud packet and they work really well. Most of them are 40watt.
Most GE shops can program it for you. Our local shop charges $25 for the 16ch model.

People who have alleged to be 'in the know' feel it's not quite as
good a performing rig as the HTX-100 was, but it's a lot cheaper,
and a LOT more 'featured'.

From the scuttlebut, it's a rework of the TRC-485 CB set, which
I believe had an international version with FM. In fact, if you look
at ads for the TRC-485 CB, and then at the HTX-10, the ONLY
difference you see, at the resolution of the photos I've seen,
is the display on the 485 had 27.405 and a big "40" and the
HTX-10 had just a 10M frequency.

It looks to be a fairly decent radio, at a very aggressive price.

No CW though... But then, how hard is it to put that in? What?
There are appliance operators out there who can't? Well, just
have to have that as a little 'kit' that plugs into the mic jack...

I'm looking for an old 'remote' cable for an Alinco DR-590 (or similar) radio. Any length. Not working is fine. Slam it in a door and cut it off? Hey, great! I'd take it for a few bucks!

I just want to make up a custom cable... So I really just need the ends.

Hmm, does anyone know if those ends are 'standard' or available elsewhere?

Another hmm... I wonder what Alinco charges for the pigtails for the radio as replacement parts?

Great audio from such a small radio. Under powered (but I can hit all repeaters around me well). Over priced. There are many small radios on the market with many more features for about the same price. The Yaesu FT-11R & FT-41R have dtmf keypad and 5 watts for about the same money, with only a modest increase in size.

Carl,
> I was looking for more power for
>20 meters mobile
You may wish to consider Lee Martin's Skywalker kits or ready built.

Small ad' in the back of QST. Not sure of his URL. Out of Myrtle Beach,
SC.

I have his 8-pill (2SC2879) unit and it works well, 50-80 in for well
over 1000 out on the peak reading Bird.

Spend the time/money on a good mobile PS system first though otherwise
things will sag on keydown.

Ian,
> In the UK we can
>definitely not have any dealings with non-approved CB sets, and even the
>importation and commercial maufacturing of 'genuine' 10m sets is banned,
>even if they are intended purely for amateur radio.
Incorrect. At the recent Leicester radio fest I personally asked Clive
Corrie of the Birmingham office of the Radio Communications Agency about
this very subject. His answer was that as far as the RA are concerned
single band, any/all mode transceivers manufactured for use on the 10m
amateur band could be imported and used by anyone with the appropriate
licence. Naturally it goes without saying that excise duty and import
tax would have to be paid, something that's probably missing from most
all of the current crop of multi-mode 11m radio's entering the UK from
Rep of Ireland and France etc.
> If we do happen to
>have an 'illegal' set (of whatever variety), we have to obtain a special
>dispensation.
No longer available. There was a limited time, back in the 80's when
modification of un-approved CB's was allowed for use on the 10m band.
> This is dealt within 'Clause aa' in the UK amateur
>licence. However, I CAN build my own non-commercial 10m-only set, even
>if I use all the parts from a 'scrap' illegal set, or legally I can buy
>a rig which covers DC to blue light
Correct
> (but not just 10m).
Incorrect as explained above.
> Strange but
>true???? True, I'm afraid!
Mr Doug Raynes at the RA's Canary Wharf HQ is your actual main man which
deals with any un-approved equipment and will be happy to clarify these
issues with you.

I do not have his number to hand but it should not be too difficult to
find.

>
> Tom>

The HF6V tunes in the opposite order - 75/80m first, then 40m, then 20m, then 15m, then 10m and then 30m. I found the setup and tuneup of this antenna to be relatively simple, and it appears to be well made. There was one small bracket missing from the box when I originally received it, but this was replaced ASAP via express mail from Butternut. I was able to easily mark the proper settings on the 80/75m (large!)coil so that the wing-nut based adjustments can be made for CW or Phone portions of the band with a simple operation. (My antenna is ground-mounted.) It works quite well for DX operations. I have not done any direct comparisons with other vertical antennas, but I have participated in a test in which another station switched between an HF6V and an R7000 on 40m. In that test, the Butternut seemed marginally better over the ~500 mile path.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

I have had in storage a set of white Kenwood HS-4 deluxe headphones from the late 1970's/early 1980's. These are the forerunners of Kenwood's famous HS-5 deluxe phones--excellent audio quality, light weight, full (and snug!) ear pads, very comfortable for long wear. They are in virtually new condition, suitable for everyday use or as a fine addition to a vintage station. Will sell for $45 + $3 to ship. Tks es 73! Jan N0JR

Bill, I have been running one for the last couple of years or so and have had no problems. However, I run mostly CW so don't have much to say about the other modes. The DST filters, to put it mildly, are magnificent. Another good point is that you can set it to have the antenna tuner operative in Rx as well as Tx. It does have a learning curve, so you would be reading the manual a lot at first.

I bought a Yaesu FT-2400H at a hamfest back in 1992. I love the radio. I don't think the FT-2500 or even the FT-2600 top it. (So educated me. The 2400 has better receive range, if nothing else.)

When I bought it I decided not to get the optional DTMF board or the CTCS encode board. Now I wish I could get them but I fear they are no longer available. Does anyone know where I could find these boards to upgrade this radio?

I had a little Honda civic hatchback that was really terrible for RF noise from the alternator. (maybe it was an aftermarket part?) After I installed a shielded cable to connect the power line to the battery it cleared the problem up quite a bit.

One thing to beware of: Many animal tracking transmitters emit only
brief blips of pure carrier, with no modulation. With a standard FM
receiver, it just unsquelches for a little while but you hear silence.
To hear the "beep beep" signature of the transmitter, you need a receiver
that's designed to receive CW, and has a BFO (beat frequency oscillator).

Thanks for the info, Phil. I do remember something which 'clarified' matters some time ago, but it seemed to me that nothing had really changed. I've got a feeling that the DTI have eventually realised how stupid the restrictions were, and may have back-tracked a bit. Maybe common sense is beginning to prevail. Never-the-less, I have a letter somewhere which says that I can build my own 10m rig using the parts from an 'illegal' set provided it was non-operational. This means that, if I 'momentarily' possess an illegal CB, and ensure that is isn't working, I can't modify it, but I can rebuild it. I think I can take the hint! I don't know of any case where a bona fide amateur has been challenged about the pedigree of his equipment.

I will have another read of 'Clause aa' in the latest licence renewal document (it's still in there, but I'll check the exact wording). By the way, it's not that I have a desparate desire to aquire and modify illegal CB sets, it's just that the introduction of 'Clause aa' effectively killed off all the interest in simple and cheap 10m modifications to both legal and illegal CB sets - and the RSGB more-or-less said "and a good thing too"! Whatever happened to their 'use or lose' policy?

73, Ian.

Hmmm...these are single-band radios, so to operate on both bands, you need to buy one of each, for a total of $378. Then you are stuck with a couple of radios with no DTMF pads on them, and that only take AA batteries? Those prices do not look all that good to me when you consider that for that amount of money, you can have any one of several dualband HTs, or even a 3-band HT, and only have to carry one radio instead of two. According to the advertisements in the October issue of QST:

Kenwood TH-79AKSS Dualband HT, $379.95
Kenwood TH-G71A Dualband HT, $259.95
ADI AT-600HP Dualband 5-Watt HT, $259.95
ADI AT-600 Dualband 2.5 Watt HT, $199.95
Yaesu VX-5R HT, $359.95 (ad shows it as a 2/440 HT but I am sure the VX-5R also includes 6 meters)
Yaesu VX-1R Dualband HT, $199.95
Yaesu FT-51RH Dualband HT, W/5W free MH29 display mic, $369.95

>
> Downside seems to be that they only take AA batteries -- will it accept
> rechargeable ones? -- and that there is no DTMF pad. How do you enter
> in frequencies, just spin the dial and hit "store?"

Probably something like that...and if you run into a repeater that uses a nonstandard frequency split, or a reversed frequency split, then what? I can't answer that because I haven't played with either of these radios, but I would caution you to find out before you fork over any of your hard-earned cash for one or both of these radios.

Heck, if you want a stripped-down radio that costs as little as possible, Alinco has those credit-card sized HTs that sell for about $90 each. For what you're going to pay for these Radio Shack models, you can do a LOT better, it would seem. Just my $0.02 worth.

73 and good DX'ing,
John D. Kasupski

Potential scanner buyers - BEWARE
I would warn against buying one of these. Something not readily know is that Australia has very tight EMI regulations and those dealers that import scanners without having them passed by the ACA are looking at a fine of several hundred thousand dollars. Also Uniden are within their rights not to service these radios should anything go wrong.

Naturally the decision is entirely up to you, I am merely stating this as a fact and a possible pitfall.

For Sale:

Heathkit Continuing Education Training Course For Sale

This is one is called "Amateur Radio Novice License."
It has a 1977 copyright date, so is obviously not current,
as far as regulations, etc. are concerned. It includes a
copy of 1979 FCC Rules and Regulations.

It does have a lot of good theory, and also includes code tapes,
along with charts and other misc items. It is in a loose leaf
notebook about 2 1/2 inches thick.

Everything is in great shape, and appears to be complete in
every aspect. It may not have ever been used, as there seem
to be no marks at all in the book.

$ 25 plus shipping from Florida.

Thanks.

I don't get it. I use the same rig in a 96 Dodge Ram with a 360 (5.9L) V8. The installation is not a problem. Very quiet and no interference to the trucks systems. Just wait till I put an amp in it! :)))

I just learned a sad lesson with deep cycle batteries. I ran a Ten-Tec Hercules on a 130 AH R.V. Gell Cell battery, in the shack. Second purpose, field day. Cost me more than I like to remember. At 2 years and 10 months it died. Now, I HAVE switched the Herc to AC supply this past year, but still used the battery for field day, and running a receiver out in the antenna field, etc. This time around, it is cheap and dirty Wal-Mart car battery for under $30! Will last a Ham for ever, and if I run in indoors, I'm not run a flame past it!
Point: Batteries are NOT my strong point, but all the local "experts" say that all deep cycle batteries are very short life compared to "regular" car batteries. So....GL OM es 73 "DM"

Forget about cranking amps for a deep cycle battery. Amp hours is the only way to judge deep cycle batteries. Remember that you can only discharge a given deep cycle battery to 50%. That means if you have a 200-amp hour battery, you should only draw a 100-amp hours out of it before recharging. The best buy on deep cycle batteries is golf cart batteries. If you can find a local golf shop that sells batteries for golf carts, you will get the cheapest price. I would assume the reason is selling golf carts, and letting the batteries go at a low price is sort of a customer draw. Usually a much better price than a regular battery shop. The best (from my experience and others) appears to be the Trojan T-105 6VDC battery. Buy two, and series them together for 12VDC, and you will have 225-amps, that can be discharged to almost 80% before charging. More amps, deeper discharge, and I have bought them for as low as $55 each. I have four of them setup along with a sinewave inverter, that work like a charm. (this gives me 450 amp hours times 80% (only the golf cart batteries can go down this low) equals aproximately 350 amp hours I can pull before starting to recharge).. If you use say 10 amps per hour, that means you should be able to run approximately 35 hours continuous before having to recharge. As a note of interest, I have a rather fancy inverter/charger, that will start out a charge of four batteries as described above, at 107 amps. recharges them up very quickly, and slowly ramps down as the charge comes up to finally end at a 'maintenance level' which doesn't harm the battery bank. Trying to use a old Pep Boys charger, that puts out only 10-amps, will take you awhile. Although, if you are at home, and have it plugged in all the time, would probably work pretty well. The situation I was talking about, was in my fifth wheel trailer, out in the boonies. When I charge, I don't want to do it for more than a couple hours via generator. Then I'm good for another day or two with no noise..

1222. help ft8100 receive fault

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-20 00:00:00 UTC
From: mark bennett <mbenne26@ford.com>
Message-ID: <380D87D3.6CF8ED9E@ford.com>
Source record: 96002

i have a Ft8100 dual band 2m/70cm with an intermittent receive fault,

it only happens sometimes when you switch it on, once on and working ok
it stays ok untill another time when you switch it on.

Fault is that the 2M receive side Fails to Receive but there is noise
from speaker as if receiver is working, and if you transmit it seems
to transmit (power pack hums and transmit bar goes across)however
so far i cannot find where or if it actually is transmitting,(i havenot
had chance to check with a meter when the fault happens)

If i change the 70cm side to receive 2M that still works fine

i have tried cold cpu reset that does not work

the only way is to keep turning the radio on and off in quick succession
until it works again

this fault seems to occur every few days

note when fault does occur all radio functions on display are normal
(there are no visible faults ie still displays frequency)

thanks in advance
MARK

1227. Re: Deep Cycle Battery Suggestion/Info

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-20 00:00:00 UTC
From: Eugene Skopal <AE2F@QSL.NET>
Message-ID: <UbpP3.1789$hK6.97765@monger.newsread.com>
Source record: 96007

A Gell Cell is a particular type of battery where the electrolyte (acid) is jelly like, instead of a liquid. Not all deep cycle batteries are gell cells. Golf Cart batteries, for example are not Gell Cell batteries. However, most gel cells try to be deep cycle batteries.

"Deep Cycle" batteries are much better for ham use that a regular car battery. A regular car battery is optimized for maximum output for very short periods of time and is easily destroyed by deep discharges. A deep cycle battery gives up total capacity and maximum output amps for survivability of deep discharges. The biggest difference between the to being that the plates do not go as far down in the battery. Also, the plates are spaced a little farther apart in a deep cell battery. Both changes lower the capacity of the deep cycle battery, but they help prevent shorts caused by material (lead) slughed off by the plates when the battery is deeply discharged.

Gell Cells are particularly prone to damage by deep discharges because the gell traps the lead flakes. There are lots of tricks the manufacturers use to try and deal with the flaking in a gell cell. In a wet cell they simply accumulate at the bottom of the cell.

For trade: Hallicrafters CB-3A tube-type CB radio.
Missing the mic and power cord, otherwise complete.
All eight channels populated with crystals. All of
the tubes are in place, but not tested. Radio is in
decent shape, but it needs a good cleaning. There's
a 1/4" phone jack on the right side of the cabinet
that looks like it doesn't belong there (added by a
previous owner, perhaps). Want to trade for a tube-
type Raytheon base station CB in good cosmetic shape
(any model except TWR-2, which I have already).

73 and thanks,
Dean, K5DH http://www.qsl.net/k5dh

Naw, do it all from 'outside' the radio.

A small box. Set the radio to SSB mode, and then have a
Twin-T circuit to oscillate with a pretty pure sine wave. It will
go through the SSB circuitry and generate the same signal
that a CW wave would. You could even use the same box to
house an active filter to route the received audio through
when in CW mode.

Flip the rig to SSB, then use the clarifier to move up and down
with the Twin-T fixed. If the clarifier is fixed on TX, well, that's
one quick mod. But even then, drag the Twin-T up or down....

> to the antenna or tower ground using at least #10 guage wire. The ARRL
> Handbook is correct.

Well, on some stuff they are, some they are not. I agree that all grounds should be tied together, but that in itself won't save your gear. Actually, I see lightning grounding as a totally different area than station grounding. Myself , I don't use "station" grounding anymore, except for the ground pin to my amp. But I sure do have grounding outside for lightning. I agree that all grounds should be at the same potential, but I don't hook these grounds to my shack. I agree with Matt on that, unhook them during storms , unless you are properly set up with gas tube arresters, etc,etc. I've been too cheap to buy all that, so I just unhook all my antennas and ground outside to my "ground window" connection outside the shack. One place the handbook is WRONG, is suggesting that you should use a bus at the shack to ground all the gear. You should not do this. You should have all gear tied to the ground connection in a star fashion. This way all gear will be at the same potential.
As far as not tieing your power line ground, to the rest of your grounds, I disagree. If you have a power fault, it's NOT being grounded that will eat your lunch. If properly grounded, it should blow a fuse or breaker. And there should be no threat of shock either, being as it's at ground potential. Also it's in the NEC rules, that states you "must" have all grounds tied together. This includes the powerline ground rod. If all grounds are at the same potential , no current can flow. I have also taken a direct hit on my mast by lightning. I had absolutaly NO damage. Because all my grounds were tied together, all my antennas were grounded out to my "ground window", and my shack was ISOLATED from ground. My mast was well grounded to earth and the plumbing under the house. This is where it all starts. You want a super good connection from your mast/tower to earth, in order to have a low resistance connection to earth. Then whats leftover is directed to ground at the "ground window". If going the fancy route, this is where all your gas tube suppressors will be mounted. With a proper setup, you can take a direct hit with no problems, but if you have but a single wire that bypasses your "ground window" without being grounded by a suppressor, this will ruin all your work. You can't have a SINGLE wire bypassing

this ground. Antenna, power, rotor cable whatever, all must be tied the ground window with suppressors. There is tons of good lightning info, if you do a search in deja -news. Gary Coffman has a lot of good posts, also check polyphaser. MK

I'm selling the following items to help finance some new equipment purchases:

(1) Yaesu FT-840 HF Transceiver. About a year old, perfect electrically and comsetically. $400.00. Manual included. This was my backup rig. Works great.

(2) Yaesu FC-10 Auto Antenna Tuner. Automatic antenna tuner for FT-840. Matches unbalanced loads. Also perfect electrically and cosmetically. $200.00. Manual included.

(3) Astron RS-20A power supply (for FT-840). $50.00

(4) Nye-Viking Antenna Tuner, model MB-II. Purchased used at a hamfest, about 8/10. Works with coaxial loads and long wires (no ladder line outputs). Handles 3 KW. $70.00.

Email if interested.

73,

Marv
AB0IO

I use a 115 amp hour D/C for my mobile rig when camping etc. I've found to prolong life, try not to overly discharge, and always use good clean distilled water to refill the battery. If you keep the charge up fairly well, and don't do any massive full discharges, you should be ok. The one I'm using is a 4 year old "energizer". It's still a going. Also, I've also used car batteries. They work ok, but are much more prone to discharge damage. You can't EVER discharge a car battery any large amount, without shortening it's life quite a bit. I prefer the D/C for radios. It's much more forgiving in this dept. But even still, I try not to run em down too far.MK

car batteries do not like to be deep cycled.
most deepcycle batteries are killed by misuse/overcharging and sulphation.
in storage they self discharge rapidly and if left over the winter without
recharging they will freeze and break internaly.
i have an old diehard with a 93 datestamp that has been used a lot and is still
good.
take proper care of them and they last.

I have a near mint IC Q7A for sale.
Standard un-modified unit I've used very little. Bought from HRO about 6 months
ago
for about $199.00
Will sell for $150.00. Will ship COD in the US.
Have the adapter RS232 kludge (home made- but works) for a PC that I'll throw
in.
I will also throw in an earphone with the weird ICOM plug that fits the Radio.
It has the wall charger and two NiCad AA cells (600Mah)
Let me know.

Source record: 96025

I just installed my new 2800 and it works fine. I purchased the cloning software and the cable. I also purchased ARRL TravelPlus which is the Repeater Directory on CD along with some trip planning software. The plan was to export a repeater list from TravelPlus and import said list into the ICOM cloning software and program the radio from the list.

Well, unfortunately, the ICOM cloning software only accepts files in this funky format (read that as proprietary) that the cloning software puts out. This is makes the software only maginally more useful than the front panel.

How do I solve this? I'll bet I have to buy more software....

Standards, folks! S-T-A-N-D-A-R-D-S.

One point which was glossed over. A lead acid battery used for this type of application should be charged at about 14.4 volts (depending on temperature) until the current drops to a low value (roughly an amp for the size batteries under consideration, and then the charger voltage should be dropped to a float voltage of 13.6 volts or so. There have been a number of good articles published, usually in application notes for one of the charger control chips, which cover the exact values and other parameters. Unfortunately, I do not have any specific citations anymore since giving then to a local who has never returned them. Check the oddball semiconductor web sites for charger control chips. There are bound to be some out there somewhere.

If you could find a microwave or telephone site being taken down and get some of those batteries they would last a looooong time if treated right.

Lemon law? Yes we do need a lemon law. I bought a brand new Alinco DJ-V5th and it was the most fantastic radio I have ever owned, for about 21 days! Then, it got splashed (very minimally) while on the boat. Why on the boat? just another form of backup in case the boat died and the VHF marine failed and I wanted to get home (live in Florida, boat in the gulf). The little radio worked fine on the way home and I didn't use it the nexy day at all. Come monday, all it would do is flash the display. Sent it in for warranty (remember, it was only 3 weeks old) and after 2 weeks I got it back. Still broken, no note, no nothing, just a fast line on the packing slip that reads: "non repairable-water damage". I called and was told the following: "we don't recomend using it under any humid circumstances and we do not recomend using it all in a tropical climate". HELLO!!!!! I live in Florida! They refuse to fix it but told me if I senbd it back, for 150 dollars they will take a part from a new radio (rendering it useless to them) and fix mine. The radio only cast 239.95 with shipping from HRO so why would I spend an extra 150 to fix it. Alinco has left me hanging with a very bad taste in my mouth. Maybe I shouldn't have had it on the boat BUT, it is a portable, handheld radio which would indicate that maybe that is what it is for! A call today to HRO and they are calling Alinco to try to get them to make it good for me. I hope they can do it, otherwise they will have left me hanging as well. Any thoughts from anyone???????? Source record: 96029

Hi there:

I will attend a meeting of the local ham club next week so I can get going on my Novice license. I'm not really interested in playing around with 2 meters, so I need to learn CW. I understand that iambic is the way to go, and I have a few questions.
I have yet to purchase a text book on ham, so please forgive my ignorance.

First, can someone please tell me what a keyer is? All I know is that I need one for
iambic operation. I have a paddle picked out, and I am wondering if I can use a keyer as a code oscillator for practice, or do I need to buy one in addition to the keyer? Will a keyer work with my Valiant? Can you use a keyer with a straight key?
And, can I use a straight key plugged in directly to the transmitter?

I've read on the web that you should start out trying to copy at 20wpm to avoid the pitfalls of trying to raise speed from 5wpm at a later date. Is it wise to start out iambic as I have read, or what? Your thoughts please.

Thank You

Cary Fries

Hi, best code tapes Ive used is Jerry Zilliack KB6MT. I think you can get them from the major ham stores or send him an email by looking up his call. If you cant find it drop me a note and Ill look it up for you.

Its been a while but the Curtis K5 keyer is pretty good. There are a few kits floating around. The good thing about a keyer is that you dont have to worry about character length so it makes it a bit easier. The keyers Ive used had a relay output (usually shorts to ground when keyed). Im not famillure with a Valiant. If you have schematics look for the push to talk (PTT) line and see if it shorts to ground. If it does pick it up at your mike connector.

Im not really much of a code fan but I can probably find out whatever you need and talk you though it. If Ive gone to fast drop me a line and Ill try to explain myself. We all have to start some where so good luck and let me know when you get on the air and maybe Ill dust off my old keyer and see if I can use it. cul es 73 KF7GD

Source record: 96034

Hi Cary,

By all means start as you intend to continue, and that means with an iambic key / keyer. The 'key' is the thing with the paddles, the 'keyer' is a box that translates the paddle movements into Morse characters (or fragments thereof!). MFJ amongst others do a nice inexpensive one - most decent keyers such as that have a 'sidetone oscillator' built in, which sounds out the characters being sent; no need for a separate practice oscillator. Buy a copy of 'CQ Amateur Radio' at a magazine stand and check out the ads for likely suspects and their 'phone numbers.

Hit the left paddle, dots come out, hit the right and dashes emerge. Squeeze them both together and an alternating dash-dot-dash-dot etc. sequence results, which saves wear-and-tear when sending things like 'C' (dah-di-dah-di).

The dah-di-dah-di-dah-di-dah pattern is highly reminiscent of musical / poetic 'iambic pentameter' rythmn - hence the name.

You _may_ need to have a keyer that can handle 'negative keying' with an older radio like the Valiant or such - check to see if it has that feature before you get it. Most modern radios use 'positive keying'. A 'positive keying' only keyer not only will not work with a 'negative keying' radio, but you might kill it in the process of trying.

Yes, you'd be able to plug a 'straight' key 'straight' in.

You ought, really, to be concentrating on learning to copy morse at this stage rather than the mechanics of sending it, but I applaud the direction in which you're moving and your forward thinking in going with a twin-paddle key. Despite having a few nice 'straight' keys around I can't remember the last time I ever used one in anger.

Most Morse training nowadays uses higher speed Morse characters rather than the painfully r e a l l y s l o w 5-wpm. It is long-term far more useful to recognise the 'sound' of a letter than to conciously count how many dots and dashes it has and figure out what order they're in! Long spaces are left between the fast characters to give you 'recognition time'; the spaces are made shorter as you become more proficient until eventually you're copying the fast morse at its normal spacing. My only take on this is that learning with say 20 w.p.m. rather than the typical 13 w.p.m. characters would be no harder and lead you more smoothly to where, on the air, you will likely need to be. It'd save that slog of 'learning Morse all over again' to get from 13 up to 20, a similar scene, but not as painful, as the crawling from 5 up to 13..

Undoubtedly, the folk at the local radio club will be able to point you in the right direction for morse tuition / practice and good practical advice. Augmenting what they may have to offer, there are many 'shareware' software

programs available for Morse practice; that'd be a very worthwhile move. If you go searching, the high-speed characters with long spaces method is called the 'Farnsworth Technique'.

One more thing. It's a bit less relevant now in this 'puter age than it was in the days of pencil-and-paper, but seeing as you're just starting, learn to send with your non-dominant (non-writing) hand. It's no harder. I saw one of my 'Elmers', Stan G5XB, do this and was stunned by its obvious utility. Haven't looked back. There's no need to swap the 'dot' and 'dash' paddles, it won't affect your speed or accuracy at all.

Sincerely wishing you well in your venture,

73 Steve W3EEE / G3YDV

who uses a Hallicrafters Hurricane for the fun of it . . .

Last day! Now, with added bonus of free shipping - see:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

A chance to get everything you need in one shot!

This package includes all of the following:

- Saber III H44QXK7139CN with the impossible to find 450-501 mhz split, in near mint condition, includes full keypad/LCD/secure capability;

- Almost new battery, excellent condition;

- Stubby UHF antenna;

- Rapid charger, as new condition;

- Saber III Enhanced convertacom, with display mike, amplified speaker and all wiring and brackets (good condition);

- RIB box with Saber programming cable (will even include a 386 computer with all you need to program, if you want);

- Saber belt clip;

- leather case; and

- extra whip antenna.

This is a once-in-a-lifetime chance to buy everything you've ever needed!

Take advantage of my retirement from the EMS business!

Covers FRS, public safety bands and will even cover all those new NYPD frequencies in the 482 mhz range!

Visit: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=179898270

Sent via Deja.com http://www.deja.com/

Hello. I have a Ameco Tx-62 tube 2 and 6 mtr transmitter for sale. Looks like a black Drake radio in appearance. Needs some cleaning up, chassis is dusty. One non original knob, seems to work fine! Tried it on 2 mtrs cw and works fine...6 mtrs lower out with 2 mtr crystal installed...only have one crystal for 2 which goes with it. No mike to test with but I would imagine fine also. New spray paint on cabinet and you got a keeper. Meter in nice shape..works fine. Make offer. Thanks.

I don't have a circuit diagram and beyond the fact that it looks like its in the psu but not HT I couldn't tell you. The diode looks like a 1N4000 series but fatter and is a diode not zener, a guy from the USA has emailed some specs, seems they know it there, but I can't match them up either. It's in a Matsui set that was sold here, a bit old now though.

There is third reason for grounding your equipment. Lightening
protection!
To properly protect your equipment, all the ground rods, including the
electrical ground rod that connects to your electrical box, should be
tied
to the antenna or tower ground using at least #10 guage wire. The ARRL
Handbook is correct.

From: Dana Gertsch <dgertsch@pecantree.recom.com>
Message-ID: <380DC7D9.E9A81F42@pecantree.recom.com>
Source record: 96141

We are getting ready to purchase a deep cycle marine battery to run my rig when the power is off. I'll probably have my HF and VHF rig on it.

If a battery has 605 cranking amps, and 205 reserve amps, how can I determine my amp/hours?

What is the relationship to cold cranking amps and amp hours? Are they one and the same or is there some type of formula to figure it out.

Thanks to all in advance your input.

Please remove "pecantree" if you are emailing me directly.

Thanks
Dana

1283. Re: Vehicle Noise - Help

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-21 00:00:00 UTC
From: Richard Ferguson <raferguson@worldnet.att.net>
Message-ID: <380FC08B.62474893@worldnet.att.net>
Source record: 95946

Computer noise is usually clock harmonics, so will be more like a birdie
than a broadband noise. If the noise is really wide, it may be fuel
pump noise. Try pulling the fuse for the fuel pump. See if the noise
goes away in the second or two before the engine stops. The frequency
dependancy could be a function of your antenna resonance rather than the
source, or it could be source driven.

Richard KA0DXM

For those who are interested in information on HF mobile noise
suppression, I suggest that you check my web site below. This article
was first published in the Mobile Amateur Radio Awards Club
newsletter. I also have information on my nine-band three-antenna HF
mobile installaion.

http://www.qsl.net/ka0dxm

If you do not have WWW access, or if you have questions, drop me a
line and I will try to help.

Sorry to read your problems with your Ham radio.
Lemon Law !

My problem is with ICOM
I purchased there new ICOM IC-2800H at Dayton Hamfest 1999 for $500.00 on sale ($540 everyday price)
on October 19,1999 someone broke into my car and stole the detachable LCD Display only, the radio
was mounted in the trunk. My insurance will not cover this (My Fault) I knew the display would
be expensive ($150-$250) but I was SHOCKED. ICOM want $500.00 just for the replacement
display and won't be available till APRIL or MAY of 2000. I not sure WHO did the stealing, the person
who took the display or the COMPANY that wants to rape the AMERICAN WORKER
BARNEY SHREVE (KC8LLN)

1287. Kenwood TH-G71A Opinions Sought

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-21 00:00:00 UTC
From: Mary-Frances Bartels <ki0dz@qsl.net>
Message-ID: <380FEB6A.A2297B56@qsl.net>
Source record: 95950

I am considering purchasing the TH-G71A. The other rig I am
considering is a Yaesu FT-50. I have been able to find plenty of "real
world" information for the Yaesu on the Internet, but precious little on
the Kenwood. Both rigs seem to be quite similar in their objectives as
well as being close in price. Can anyone please point me to some
first-hand accounts on the Kenwood rig? I would also be interested in
hearing from owners of this HT.
Thank you.

Probably because of how they're treated. If you
let that battery sit idle for a year between uses,
it's not going to last too long. Likewise if you
overcharge it, or run it down much below 12v.

Is anyone using a Yaesu FT-50 with the MAHA MH-FNB-40H NiMH battery pack? I am thinking about buying a couple of them to replace my aging NiCad packs. I have a few questions that I hope someone can answer.

How well does it fit the Yaesu FT-50?
Does it match the radio?
How is the quality?
Will the Yaesu "CLIP 10" belt clip fit this MAHA pack?
Is the MAHA MH-FNB-40H NiMH battery pack the same "thickness" as the Yaesu FNB-40 NiCad pack?

Thanks,
John

As an FYI, you should be able to get a deep cycle
12V 100AH wet battery for less than $100 in the
US. Way cheaper than gells, should last longer
too. Biggest danger is from the acid, should be
stored in a battery box, fused & kept away from
kids.

Hmm, not sure what that is. My NiMH battery had a clip on it when I
bought it.

>Is the MAHA MH-FNB-40H NiMH battery pack the same "thickness" as the Yaesu
>FNB-40 NiCad pack?

Oops, I just noticed you said MAHA, my NiMH battery is by E.H. Yost.
I'd imagine the answers are the same for the MAHA. I have their
charger and am very pleased with it.

> ------
> Just random thoughts

I think mine was about 55-60 bucks for an 115 amp/hr,750 MCA. Makes a good car battery in a pinch if the regular one runs down. Has plenty of cranking amps. I use anderson power connectors for the batteries and rigs. Any one piece can be connected to another as all the connectors are the same. Great connectors, but not cheap. Have silver plated connectors. The model I use handle 50 amps at 600v. I can jump start my car without getting out when I have the deep cycle behind the back seat. Anyway, you should be able to get a decent D/C at any auto store for less than 65 bucks. Depends on the a/h rating. They will usually have 2 or 3 sizes. The 115 a/h model I got was the "middle" model. BTW, I've always used mine here in the house too. Never had a problem with fumes or anything. Just don't charge real fast and that won't be a problem. Myself, I think you would be better off to start with a manual code key, and then go to iambic later. The main reason being is with the manual key, it forces to to use the proper spacing and timing. Also I'm kinda mixed on starting fast ala the farnsworth method. If all you want to do is pass a test, but not work cw, it may be ok. But if you plan on really working cw on the air, I'd start slow, and build from there. After all, everyone you work won't be doing 20 wpm. So you should also be able to feel comfortable at slow speeds. If all you use is fast code, when you hear a speed different from what your used to, it will throw you off. So you should really practice at all the different speeds. Normally, from slower to faster. After you get to about the 10-13 wpm speed, then go to your iambic keyer. To use an iambic keyer, you must have a dual contact paddle. IE: bencher, vibroplex, etc. A keyer should do fine on the valiant as long as the polarity is right, and the keying voltages are not too high for the keyer. I doubt that would be a problem. A straight key would work fine. In fact, I would recommend you start that way, just to get the hang of the rhythm and timing of the code. Then after you pass the novice and start getting the speed up, then go for a good keyer. After you use the keyer a while, you will really start getting faster, and can start practicing "no pencil" cw. Thats how you really get the speed up. I've gotten slower lately due to lack of operating, but have been able to do 55-60 wpm in the past. But you don't write much down at that speed. I used a valiant and straight key when I was a novice. Pretty powerful transmitter.And those 866's put off a nice blue glow..:g MK

Hi,

I have a 95 Ford Explorer and am using an Alinco DX70 with the auto tuner and a 10 meter whip mounted on the bumper. I have a noise that is worst on AM that is a small but frustrating noise on SSB. It is mostly steady in that it does not speed up or get louder when engine RPM is raised. It seems to start at 9 MHZ and is worst at 9,18 and 27 MHZ. Does anyone know if this is the cars computer noise? There is no noise under 9 MHZ and none on 6 Mtrs.

Thanks !

Why would you pay $100 bucks for 100AH when you can pay about the same and get two 6VDC golf cart batteries (in series, $55 each) with a rating of 225AH? That plus the fact you should only discharge the 100AH battery 50%, down to no less than 50AH before charging. You can discharge the 225AH golf cart batteries down to 80% which translates around 175 AH before needing a charge.

Jerry...

Source record: 96067

Cary, first of all; good for you for opting for CW... we need more like you in the brasspounder ranks.

I'd advise getting a code tutor computer program such as SuperMorse or Morse Academy. I used SuperMorse myself to brush up on code. You can set character and total speed to suit yourself. Using 20 wpm characters separated to a slower total speed (Farnsworth methot) is okay if you don't have problems telling characters apart by their rhythm. If you do, start out at using about 15 wpm characters which are fast enough to keep you from "counting the dits and dahs" but slow enough for you to easily catch the rhythm and tell the differeince between i, s, h, and 5 as well b and d and between u and v, etc.

I don't really have good advice on whether to start with an iambic key and keyer or to start with a straight key.... both have advantages and disadvantages. I know that the purists among us will advise mastering the straight key first and they may be right. I enjoy the straight key myself and always change to it when working someone using one.

One thing I would advise is to make tape recordings of your sending and then by listening to them (especially after waiting a while) you can pick up errors yourself. Another helpful thing is to send using a decoder of some type; they are merciless and will read only perfect code :-)

You are truly entering into the company of real gentlemen by going into the world of CW. It is a rare event to work any other but helpful ops. Don't be bashful or nervous as the more experienced ops will be delighted to work you and help you gain experience.

I hope to meet you on the air!

Cary, you can use a straight key with your Valiant; that's what it's designed for. And I do NOT recommend a keyer while you are learning the code.

I don't recommend code tapes or computer programs either. Just listen to real hams communicating on the air. And yes, you will find that if you try to work up your speed a little at a time you will find yourself learning the code three times. Start at high speed and you will only have to learn it once. It will be frustrating but hang in there and you'll get it in a couple of months at the most, depending on your level of effort, commitment, and of course talent for it.

Learn to send with a code oscillator. That will help you get the feel of how characters are formed. You will be a bit sloppy at the outset but it will improve. Don't take this lightly, but don't worry about it either. It's a lot of fun!

Kijun,

Unless you have had experience working with surface mount components, I would recommend having your JRC dealer perform the modification. If you damage the circuit board it could be quite expensive to have it repaired. At the end of this message I will include a description of the modification which was posted to a list service in the past. The mod is well worthwhile.

73,
Bob AD3K

> Pure pretty

30 March 1999

THE FOLLOWING ARE THE INSTRUCTIONS FOR THE NB MOD;

1. If you intend to keep and work on the JST-245, I suggest you obtain

a Service Manual for the radio. You can obtain one (at their high cost) from Universal Radio or through JRC themselves.

2. This is somewhat a difficult MOD. if you are not accomplished in or

do not have SMD installation and repair experience.

3. Take all normal electrostatic precautions when attempting the MOD.

4. Remove CGH-192A circuit board (UGH!!)

5. CHANGES TO CGH-192A, SYNTHESIZER BOARD (all components on underside

of the board)

a. Change C519 From: 0.022ufd. To: 0.01 ufd.
b. Change R529(SMD) From: 100K To: 10K
c. Change R535(SMD) From: 10K To: 2.2K

6. CHANGES TO CDE-783, FRONT PANEL UNIT (component near J68-1)

a. Loosen and bring front panel open.

b. Change R69 From: 22K To: 3.3K (1/8 or ï¿½

watt axial lead)

7. After components are replaced, "tweak" RV-11 on the CGH-192A board for best noise blanking performance. You may want to optimize T11/T12/T13 for blanking, as well.

8. The changes will significantly improve the NB performance of the JST-245 and correct the problem of low NB gain and drive. Without the change the NB is worthless.

AH! The "MUSIC" mode...how it does tickle the ears....I love it. Most all previously written sounds good...some great. None wrong... I would expand a little one the Iambic thing...Learn on a straight key...a hand key...if for no other reason than to be able to continue your QSO when your little jewel crapps out...to say nothing of the joy of Straight Key Nite! I then went to a Bug. Then a fair piece later to an Iambic keyer. So, I've been most of those places. There is no getting around it, those seven (7) Iambic letters let you run tha t keyer with much less hand motion, and you don't need to glue your paddle to the table. In fact, I use mine "mobile". On the other hand, now that I have been Iambic for so long, my bug fist is totally gone. 'Couldn't send on a bug to escape death. When you become a normal CW op, and just run with the pack, you will --believe it or not---cruise between 25 and 35 WPM, reading the Music in your head....a second language. Those speeds are capable on bug. I wish I could still do that 'cuz nowadays, the faster ops are
all typing away on a keyboard and can leave you in the dust anyway. The bug gave me such control,,such a feeling of "me" sending,,,my own fist, unlike anybody else...AND, from what I hear, a Computer Reader cannot copy a bug! Yeah! Welcome...we want you...we need you, and will gladly slow down for you as you grow. C U on 4o thru 10, CW of course! 73 "DM"

HI Guys!

Have a chance to buy one of these but the seller is not all that familiar with it.

Some questions:

- Does it have PL tone encode (at least)?

- Can it handle standard/non-standard repeater offsets?

- Anyone know where (on the web) I can find out info and/or a pic of this unit?

ie: I am looking for an inexpensive 2m rig to hit the local San Fernando Valley repeaters.

Be glad it doesn't. There's a virus attached to the file this
idiot keeps pushing on all the newsgroups.

It keeps changing because he keeps getting traced to the sites
he posts and they pull his accounts.

Hi Guys!

Trying to get together a decent little 2 meter mobile in the house to access local repeaters (etc). Have everything except a good 20 amp PS and the actual 2m rig. (Have a lead on a rigr, but nothing definate.)

So let's trade!

Here's some stuff I have for sale/trade:

Cobra 148 GTL - 11 meter rig. xlnt swing, 100% modulation, extra channels, adjustable power, like new. Includes a power mic (Astatic D104 Minuiteman II handmic)
$125ish

Little Casio TV-470 2" LCD TV. Works on 6vdc (4 AA"s or adapter).
$40.

MusicStar system - teachs m,usic, create MIDI songs,c reate multitrack music, etc. Includes mini keyboard and PC soundcard MIDI interface and a pile of software.
$40.

tnx - 73 - Ed - KF6YKM

Shack Cleaning Sale!

MFJ 1272B TNC/MIC switch (8-pin) $10 + $3 for priority shipping

MFJ 949B antenna tuner w/ 300w dummy load $40 + $5 shipping (selling because it's too large for mobile use)

MFJ 557 Code practice oscillator w/key (plastic case has crack, does NOT affect operation) $12 + $3 shipping

MFJ-422B pacesetter keyer with Bencher paddle set (black base) Like new, Sold as a SET ONLY. $90 + $5 shipping

Always looking to TRADE. Here's what I would like:

SMALL keyer (like MFJ 401, for portable use) Yes, size DOES matter.

HTX-100 (could always use a spare)

Thanks for reading and 73 de Gary k7mhz

Jim,
In addition to all that has been said, the most common component that
will
go when you reverse polarity is a protect diode that is in parallel with
the B+ and Neg on the circuit board. This diode is easily replaceable
with a NTE125 diode.

1335. Mobile Radio Mounts?

Newsgroup: rec.radio.amateur.equipment

Message-ID: <boJP3.545$SS6.13926@dfiatx1-snr1.gtei.net>
Source record: 96082

Can anyone suggest a store that sells a radio mount that has 2 swivel ball joints that you tighten into place with 2 wing nuts. They used to be popular when cell phones were mounted into cars. IIX mounts are too massive and the goose neck type moves on me that can be bought from HRO and Radio Shack stores. I can not find any store that sells the dual ball type radio mounts.

Thanks,
Sean - K3XT

I am in need of a 2" or smaller round meter with a 1ma movement.

Something nice and backlit (if not backlit it must be readily modified
with a backlight without an invasive procedure).

The meter face could be square but the meter body needs to fit in a
round hole.

Thanks! & 73, DavidC K1YP

I've never used one of the Radio Shack radios myself, but I thought I'd remind people of a point that's been made in the past when the pros/cons of their radios have come up (because nobody seems to have mentioned it this time). A number of people find that the Radio Shack radios are preferable simply because they are *not* wide-band receivers, and thus don't have the intermod problems. I don't even know if this is true of the new ones, but a search of the newsgroup archives will probably dig up some of the original statements made by people who liked the radios. Again, I have no direct information on this; I'm just mentioning a point I've heard made in the past in this group.

I install and service automated hydro-meteorological gaging stations. They are entirely self-contained, and operate off of solar panels and trolling motor batteries. Virtually all battery failures at this time are 93' date stamped. We just purchased some "glass-matt" trolling motor batteries (at 3x cost) and I'll get back to you when they start failing.

Press the key labelled HM/RV
The RV seems to mean "Reverse"

Press it again to return to the repeater output frequency

I have a Kenwood TH-G71A. Before I had a Icom ICOM IC-T8AHP. I use the HT at least 7 hours a day. I works well. The only problem is I had one stolen and another lost. But, I bought third. It is easy to use also. There is picture of one of the Kenwood with my shack.

Hey again,

I don't know what happened but I put a posting up earlier today
and now it is not here anymore. Well, here I go again.
I have a 2-channel Motorola Maxtrac 100 with 25w output.
There is a new mike, power cord and mounting bracket that
comes with the radio. This radio is 100% operational and
good cosmetically. Would like 275.00 for it or would be
interested in trading for Motorola low-band 42-50 mhz mobile.

May even be interested in trading for good condition dual-band
2-meter/440 mobile.

Tnx for reading

> a few questions that I hope someone can answer.
>
> How well does it fit the Yaesu FT-50?
Just like factory

> Does it match the radio?
Exactly

> How is the quality?
Fine

> Will the Yaesu "CLIP 10" belt clip fit this MAHA pack?
Yes. Clip mounts are identical

> Is the MAHA MH-FNB-40H NiMH battery pack the same "thickness" as the Yaesu
> FNB-40 NiCad pack?
Not 100% sure. If those part numbers represent the same voltage and
Milliamp-hours, then the NiMH may be a little thinner. For the identical
thickness ones, you get a little more capacity and/or voltage out of the
NiMH.

You can't really tell the difference.

You may not want to leave it plugged in and charging for more than a day (if
that much) with the NiMH becaise the circuitry may not be made to handle
charging them and it could heat up.

actually, if you actually knew anything about these radio's, you'd know
that the w4 (500-520) actually won't go down as far as police rx! maybe
some get to cb, but NONE will do police recieve! they do have to be modded
to make the resonators/vco be able to cope. sorry to make you look stupid,
but i felt you had to be corrected!. thanks,
Aaron.
p.s. andrew, where are you? can you reply via e-mail. thanks.

This is not the case now, I saw these radios up close and personal and they are cheapo, AA powered HTs that are really funky. The 202 and the 404 were real radios, these are specialty items, low powered and over priced. RS has made a big mistake with this pair of HTs.

1377. Yaesu VX-5R feature?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-22 00:00:00 UTC
From: jscarfone@my-deja.com
Message-ID: <7uq36b$4ck$1@nnrp1.deja.com>
Source record: 95963

Does anyone know whether the VX-5R has the following feature?

Sometimes when using a repeater, it's nice to be able to quickly monitor the repeater's input frequency to see how well someone else sounds direct. It'd be great if I could press a button to toggle this when listening normally to the repeater's output frequency similar to how the MONI button removes the squelch when pressed.

With all the bells and whistles this model has, it seems like there must be a way to do this.

Howdy, Folks.

This is an open invitation to browse http://hfradio.org, the NW7US Ham Radio and Shortwave Radio Resource Website.

This non-commercial site offers:

+ Azimuth Map / Equidistant Map Creation (choose any QTH as center, many options

+ Propagational Resources (live, real-time reports, eAlert service (sign up for automatic email solar/geo reports, complete with Aurora index))

+ News, and DX information and reports

+ QSL Manager and Callsign Lookup center

+ Swap and Shop

+ FREE HOME PAGES THAT YOU CAN USE TO POST YOUR OWN HAM OR SWL SITE

+ Bookstore - SWL and Ham related books. Over a 1000 titles so far.

+ Plus more (Directories, etc.)

This is my offering to the community, all funded by me. I am working hard to bring excellent content to the site. I have need for others who might wish to assist. I need a Software editor -- someone who can review and post software links, etc. Let me know if you are interested. (See the site on how to email me).

If you feel up to it, after looking around the site, drop me a note (you'll find my address on the site) and share your thoughts.

73!

1383. Re: Yaesu FT-100 $1229 at AES

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-22 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <19991022093046.17402.00000398@ng-fh1.aol.com>
Source record: 95969

they corrected the price on thir Web Site and on all flyers at their locations. My impression is that they thought there might be a price reduction either by Yaesu or by themselves due to some rebate/coupon and needed lead time to print the flyer/Web page etc. SOme how this price reduction never happened or was postponed etc. My feeling is that you will see some deep price cuts on many radios starting in the next month. I have been a Ham for 14 years and have seen this happend every Fall. Just wait and you will get that price.

From: Willie Peloquin <wpeloqui@ismi.net>
Message-ID: <7uqhrnfhs1@nnrp1.deja.com>
Source record: 95971

Hi,

I have a TH-G71A, I think it is the best HT I have ever owned. I was looking at the FT-50 also, but after comparing the two head to head at AES, I chose the G71A. FWIW, I also like it better than my TH-D7A data radio. IMHO the D7A is only good for APRS work. I have used it many times for fox hunting and for satellite work (AO-27) with great results.

FWIW,
73,

Willie N8MDY

I have a Motorola MaxTrac 100 2-channel UHF Radio for sale. It is
currently on tx: 469.625 rx: 464.625 with a DCS of 624.
This radio is in good physical condition and has 25w output.
It will come with a new power cord pkg (Unopened) and new HMN3596A
mike, with new mike clip, also includes new mounting brkt.
Will ship anywhere. Asking 275.00 plus shipping. May be flexible on
price, and will consider trade for a low-band radio 42-50 mhz.

1387. 2m/11m(CB) mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-22 00:00:00 UTC
From: mfavinsk@my-deja.com
Message-ID: <7uqihr$g0g$1@nnrp1.deja.com>
Source record: 95973

I'm looking for an all-in-one mobile rig that will either stock or modified allow me to transmit FM on 2m and/or 70cm and AM on CB(11m.) I know that Icom and Yaesu make multimode HF rigs that allow you to transmit from 160m all the way down to 70cm. I don't need anything this fancy/expensive, just someting that'll let me transmit on the VHF/UHF bands on AM on CB.

Kenwood makes a couble of mobiles that let you receive on CB with an added module, but I'm not sure of they transmit AM in those bands.

Anyone know if this piece of mystery equipment exists? If it does, please let me know.

1388. Suggestions needed: Good VHF receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-22 00:00:00 UTC
From: Tracy Hooker <thooker@psl.nmsu.edu>
Message-ID: <3810740F.9F072982@psl.nmsu.edu>
Source record: 95974

I have an application where I need a very good VHF receiver. I will be receiving high fidelity FM signals in the 151MHz region, or most likely 180-190 MHz region. I want very low noise (AF, not necessarly RF). I would like the AF to be as clean as possible. I really need to be able to tune to several channels, however, I am a little worried about synthisized radios, since their PLL's do generate noise that makes it into the audio path. If could probably go with a single frequency, crystal controlled radio, but I don't know who makes such a beast in these frequencies. I have up to $1500 to spend on this receiver.

Any ideas would be appreciated.

1391. 870 thread.... no flaming allowed :)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-22 00:00:00 UTC
From: Bob Clermont <sales@igs.net>
Message-ID: <7uq9bq$o52$1@news.igs.net>
Source record: 95977

Hello Frank...

Thanks for the offer.

I was thinking there might be a site that would allow me some history on pros & cons of the 870.

I have infact purchased a new rig from Kenwood.... and I understand it was only manufactured in Sept 99. So from this, I expect it to be the most current with respect to ugrades, fixes and the like.

This is exactly the information I'm looking for.... but in a historic sense.... what were the quirks, how were they fixed, and etc.

Being a full time pro musician, I have rather finely tuned ears (ssb bandwidth kills me), but I hear all these supossed high tech audio philes running mixers, parametric and graphic eq's, big diaphram mic's and etc. With the 870... I can run almost any studio (stage) mic I own... without the rack of pre-effects. The normal comment I get is "AM Broadcast quality" from my audio. I would like to think that my heard voice is not "AM" but instead "FM" Broadcast quality :)

I have a really big, deep voice which I think comes from 30 years a pro singer/player. I find the 870 to have the most realistic (non-colored) vocal qualities of any of the rigs I've tried. With the menu control over tx characteristics, and band widths... at least it sounds better to me in the monitor.

I have also had good luck with an HC-5 cartridge running on a headphone boom. I managed to diddle with the menu options to get a smooth natural reproduction of my voice.

I'm curious if any others have played with these settings, and what they're results were.

Good DX to all and Keep CW Alive

BTW..... the keyer on the 870 I've been told is very musical to the listener... I rather like that :)

From: Bob Clermont <sales@igs.net>
Message-ID: <7uq9tl$o64$1@news.igs.net>
Source record: 95978

Yuri.....

I went to your site..... and read of the exchage of IF filters you're planning.

One of the reason's I purchased the 870 was the so-called lack of need from crystal filters. I would have thought the Kenwood would have made the onboard filters of sufficient spec to allow for a smooth marriage with the DSP filters process'.

In fact.... the two SSB filters you cite in your article... are the two I used in my TS-850. Yes, I too found the radio unusable before the addition of these rocks, but I find it hard to swallow, that I must be buy these same rocks I just sold with the 850 again.... for my new 870.... :(

I ask these of you with upmost respect Yuri....

1. Are you the only person who has changed to this arrangement?

2. Are you in the Ottawa area... so as I may at your liesure, compare the two side by side.

3. Is your 870 of an older vintage that may have already been tended to by Kenwood in the latest models?

Just asking politely of course... :)

1394. Wanted - two or three handhelds

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-22 00:00:00 UTC
From: corky@teleport.com
Message-ID: <ER1Q3.1113$C7.44764@news1.teleport.com>
Source record: 95980

A group planning on climbing a South American mountain need two or three handhelds capable of being converted to 142.8 to communicate with muleteers and the local Rangers in case of emergencies..

This is single use for these things, would be more appropriate to rent, probably can't do that.

Would need 5 watts, light-weight, probably easy use of AA batteries which can be solar re-charged, and a couple of channels around 142.8 for intra-party communication.

Anyone got any good ideas. We're all nose-pickers, not amateur radio folks.

I have a near mint IC Q7A for sale.
Standard un-modified unit I've used very little.
Bought from HRO about 6 months ago for about $199.00
Will sell for $150.00. Will for this COD in the US.
Have the adapter RS232 kludge (home made- but works) for a PC
that I'll throw in.
Works with the free software available on the web.
I will also throw in an earphone with the "weird" ICOM / Yaesu plug that fits
the Radio.
It has the wall charger and two NiCad AA cells (600Mah)

alt.radio.scanner,rec.radio.amateur.equipment,rec.radio.amateur.space,rec.radio.amateur.swap,rec.radio.scanner,rec.radio.swap

Greetings Fulton..

Looks like you've got a nice unit!! However, I think at the price quoted it may be competing with Time Step's PROscan receiver:

Reference:
Scroll down until you see PROscan APT Receiver, also click on the pictures
http://www.time-step.com/apt/apt.htm

In the USA it's sold by Swagur Enterprises Inc. (joint cooperation) as illustrated at the following:
http://www.swagur.com/
On the left hand side of the screen click on APT Satellite. At the new window, scroll down and find Swagur-TimeStep PROscan Receiver. Notice the USA price.

No doubt that your receiver does indeed offer some features that this receiver doesn't. One thing that is nice about the Time-Step PROscan Receiver is there's no squelch. The scanning portion of the receiver locks up once the 2400 Hz carrier of the click-click-click sound is heard as the satellite comes over the horizon. Yours may be designed the same way..

Cheers,
Gary

After the QST article regarding the inexpensive R139 over here in the states, many folks are going this route only due to the price. Ref.: http://www.hamtronics.com/ and the receiver at: http://www.hamtronics.com/r139.html . However, this is *certainly* not to be compared to what you've got!

..SNIP..

You might find that there are more differences than just the pin out.
Back when the Bus Mouse was
new, there were several different mouse protocols. They sent different
numbers of bytes and they were interpreted differently.

I'll try to find more details in my archives.

Don,

Grounds would seem to be simple, but they are not.

The power company & safety people want 1 ground in your home where the power comes into the house, generally near the meter. Multiple ground rods in different locations are frowned upon.

For RF purposes, the connection to ground must be much much shorter than a wavelength. A ground wire that is 1/4 wave long is useless. On ten meters a ground connection more than a couple feet long won't do it really "ground" the equipment.

Also, even if you shack is on the first floor, "real" ground is not necessarily at the top of a ground rod.

So, why do you need a ground anyway? Because there is obviously RF on the outside of the equipment.
How did it get there? The 2 likely causes are:
1. The transmitter cabinet, (or the tuner or some other piece of gear) do not have 100% perfect shielding. This is not uncommon in affordable radio equipment. Look all around at the seams in the cabinets. Bare metal must touch bare metal all the way. If this is not the case, scrape off paint. Get a roll of copper foil tape and seal up all the joints.

2. Signal coming down from the antenna system. If you have a good dummy load and have RF with
the dummy load, go back to step 1. Otherwise look at the antenna and feedline. An extreme example
of how not to have RF in the shack is to use an end fed wire! Instead, you want a balanced antenna,
properly connected with a gamma match or balun and the feedline at right angles to the antenna.

Good luck Don. Let the newsgroup know how you solve your problem

Source record: 95847

The pack is glued together. Start at the part where it mates to the HT and prise up the tab slightly. I took a hammer and lightly tapped the sices of the case before I started. It pops open from there and toward the bottom.

1412. How to open Yaesu battery pack?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-23 00:00:00 UTC
From: Paul Zander <paulz@thegrid.net>
Message-ID: <3811F228.875BB60C@thegrid.net>
Source record: 95848

I have a Yaesu FNB-4 battery on one of my HTs. After some years, the battery no longer takes a charge,
so I bought an "insert" with the proper number of cells.

Now I can't figure out how to get the old pack open! There are no screws to take out and no obvious places to push with a screw driver to unlatch it.

Thanks,\ & 73,

Paul aa6pz@arrl.net

I learned CW the old fashioned way. Starting slow and building up. The
"challange" is that characters
really sound different at 5 wpm and 15 wpm. Almost everyone experiences a
plateau somewhere around 10 wpm. You practice for what seems like forever until
the brain is reprogrammed.

Now if you were learning to speak a foreign language, you don't start at 10th
the speed of normal.
Instead you start a little slow but with very few words and build the
vocabulary. The Koch method
for CW is like that. You set SuperMorse (or other program) to send at 15 or 20
wpm, but to only
do K and M. You learn the sound of 2 letters. After you can correctly copy
90% of the time, you add
a letter, and so on.

Here are 2 URLs with more details.

http://www.ees.nmt.edu/sara/sara/n1irz.html
http://www.ees.nmt.edu/sara/sara/finley.morse.html

Please share with newgroup how this works for you.

It's a royal pain....My method was to use a sharp razor blade to score the edges, and then heat up the battery with a hot hair dryer to soften the glue a bit. I eventually pried it apart without ruining it. But then you have to put it back together...You can reglue or just tape the thing together. I converted one to a "aa" battery case. I think if I have it to do over, I'll just buy the whole new battery. It's hard to take those cases apart without mangling them. Unless someone has an easy method...

Source record: 95854

Hi:
I have had the 850 for 3 years. No problems, love it. Strange thing happened today. The 850 goes to low pass filter to an MFJ antenna switch then to an AL-80B then to an MFJ-989C and finally to the antenna switch at the antenna and finally to the antenna. OK I know, lots of connectors. I was listening to 20 meters today. Things sounded like they were going through a very slow QSB finally almost no S meter reading and only strong signals were coming through. After about 20 minutes all was normal again. Any ideas?

In article <380FEB6A.A2297B56@qsl.net>, ki0dz@qsl.net says...
> I am considering purchasing the TH-G71A.

Me too!

I am getting back into the hobby after a two-year hiatus. A new marriage and a new apartment sort of cramped my operating for a bit!! Now we have bought a townhouse and have settled in. I still can't stick any serious antennas anywhere, but that is for another newsgroup.

My question is about the G71A. I own a Kenwood V7A that I am going to be re-installing in my new (used) vehicle. The Kenwood ads mention that the G71 can remotely control the V7A. I am wondering what exactly this means. Can it interact with the V7 in a way that another dual-band HT can't? I have also been considering the IC-W32. It is a few dollars more at HRO, but is it worth it?

I have been lurking for a while and will continue to monitor this thread with interest.

I have some Inrad CW filters in one of my TS-940s (unfortunately, the one that doesn't work for a reason that has nothing to do with the filters!) and found them to be *excellent* filters. And quite a bit better than the stock Kenwood filters in my other 940. The Inrad filters have sharper "skirt selectivity" -- the width of the passband is about the same, but signals outside the passband are more attenuated.

The width.. depends on what you plan to do with the radio. For casual ragchewing, a relatively wide filter (2.4kHz) will usually be adequate, though you're probably going to have some problems when the bands are busy. I don't think you can go wrong with a 1.8 or 2.1, if the price is within reason.

>the settings I used for "beep" on-off, "lamp" on-off, voltage meter,
>etc. seem to reset themselves when the battery pack is taken off.
>Anyone have this problem? Any ideas as to why this is happening?

The FT-50 has a small lithium battery on the CPU board that provides
power to retain these settings while you change main batteries. If
the little lithium cell was dead, the radio would likely work normally
while power is supplied from the main battery (or from the external DC
jack), but data would be lost if all those power sources were removed.

You probably need to replace the little lithium battery. The FT-50
isn't terribly difficult to take apart; no soldering is necessary
(except for the battery connections themselves).

It might also be worthwhile to figure out why the lithium battery
died. Do you normally store your FT-50 without a battery on it?
When the main battery is attached, any standby current needed to
retain the memory contents will come from it, so when an FT-50 is
used regularly the lithium battery should be supplying power only
during battery changes. If you leave the FT-50 for long periods
without a battery pack, or with a dead one, then the memory current
comes from the lithium cell, discharging it much faster.

Source record: 95868

Hi,
The first IF frequency and physical size between Kenwood and Yaesu is different. The second IF is same 455 but the size and pin out is different. Therefore you have to stay with original unless after market co. makes it for particular radio.
I feel comfortable with 2.4 KHZ on Yaesu radios and 2.0 KHZ filter seem to be too narrow. Stock FT890 second IF filter is not a crystal filter, it is a cheap murata ceramic filter.
Good Luck.

FOR SALE:

I have the following items for sale:

All are less than 2 years old, look and work like new. Cost new $2915.00.

SGC PS-50 50 Amp Cont Duty Power supply -- $335.00
SGC 500 500 watt amp (cont cvg 1.8-30 Mhz)--$ 935.00
SGC 235 500 watt auto tuner 1.8 - 30 Mhz --$ 935.00

All manuals included. I would like to sell this as a package and will take $2000.00 for the lot, otherwise priced as indicated above.

Terms: Certified check, money order, or cash. You pay the shipping.

No UPS COD, if you want COD, FedEx is ok.

Please reply via e-mail, and don't forget to remove the +nospam+ from my address.

MFJ 1270B with 1272b switch box. Wired for 8-pin Icom (I believe)
In good condition with all manuals.
Got in a trade deal, but no time to mess with packet.
$90 shipped for all or trade for ham stuff. I'm looking for the following:
HTX-100 (can always use a spare)
MFJ 401C + cash (or other SMALL keyer for portable use)
HTX-202 2m HT (cosmetic condition not an issue, but must work 100%)

Thanks and 73,

Gary k7mhz

1436. FS: Ten-Tec Triton IV & Accessories

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-23 00:00:00 UTC
From: gharmon@idworld.net
Message-ID: <381103bc.309353630@news.idworld.net>
Source record: 95915

For those of you who have been wanting a Ten-Tec Triton IV and have
decided to acquire one, here is that opportunity. This one operates
great especially since I just paid Ten-Tec $150 to repair and align
it. Unfortunately it is not cosmetic collector quality.

Ten-Tec Triton IV (540) analog HF transceiver
New final transistors
CW filter (245)
Noise blanker (249)
Deluxe power supply w/speaker and VOX (262G)
160m converter (240)
Original manuals

All pieces in VG or better condition.
Insides clean, no signs of damage or modifications.
Some worn spots on the transceiver panel with several letters/numbers
redone using dry transfers.
No panel problems with power supply or 160m converter.

No mike or key.

See pictures at
http://www.txdirect.net/users/k5jwk/Ten-Tec1.jpg
http://www.txdirect.net/users/k5jwk/Ten-Tec2.jpg

$400 invested. Asking that price OBO plus postage. Interesting
trades (not just Ten-Tec) considered. Will not split at this time.

Thanks for reading.
gary

I have a series 7N FT-50RD which recently began failing to keep some of the memory settings. While the programmed frequencies remain the same, the settings I used for "beep" on-off, "lamp" on-off, voltage meter, etc. seem to reset themselves when the battery pack is taken off. Anyone have this problem? Any ideas as to why this is happening?
Thanks,
Valerie

I have owned the thg71 for about a year, before that i had a th79. i
really like the thg71, the rx audio is great good sensitivity and
selectivity.the radio is well built and the extended rx is a nice
featuer
i picked up a 9.6v 1020mah nickle metal hydride battery for it from mr.
nicad and the charge lasts me a couple of days!

if i had to buy another radio i would buy the same radio

Source record: 95933

I recently purchased the 25 amp MFJ unit and am quite pleased with it.
It's running an Icom 706 MK II as a base rig with two magmount
antennas indoors. (I know, I know.... An upcoming weekend should see
at least one outside antenna for the rig...)

Anyway, I've had no RF noise that I can hear and none seems to get
into the old Hallicrafter S-40 with a wire antenna running past the
PS.

The only noise I hear is from the fan.

Yes, I would buy another unit.

Source record: 95934
Body handling: Binary attachment payload not displayed: w8gur.vcf

I have a repeater the 145.17 in memory location #1, For the last few months I noticed that the PL of 100 HZ in there from 4 years ago was default now, 88.5. I have reset it to the 100z again and after it seems hours it is back to the default. 88.5, none of the other memorys are having any problem. They still have the correct PL in them. I have refered to the manual , there is no mention of battery, and I have not done a complete reset as of yet anyway. I wonder if there is battery in the as 4 years is quite a while.

Can anyone help? I would hate to send it, I use it almost daily. I do use it in the mobile.

Thanks

73, Dave

> Is anyone using a Yaesu FT-50 with the MAHA MH-FNB-40H NiMH...

How about the FNB-49 at 7.2V 1800mAH???

They're available from Maha and others...I have had excellent
performance with both my Yaesu FT-50 and Vertex VX-10 HTs with them.

And do not forget: NiMH cells desire a completely different charging
algorithm than do NiCads...grab a Maha MH-C777a Universal
Charger/Conditioner while you're at it - it will properly treat just
about ANY 4.8V-to-12VDC NiCd *or* NiMH pack you have!

Message-ID: <s178nkp5gbb25@freenews.remarq.com>
Source record: 95744
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

I am acquiring an Alinco DJ580T 2/440 HT with scanning
capabilities down to 33mHz and up to 470 and even 800mHz.

I am also trying to acquire a Uniden BC-245XLT scanner.
The Uniden will be the primary 33-47 and 151-155 mHz monitoring
and 800 mHz trunktracking scanner. The HT will primarily be used
on 2 & 440.

Is there a single antenna that can handle such ranges (with
an emphasis on 2 and 440) and that is a mag mount? Or do I
need two separate mobile antennas?

I am guessing some sort of scanner antenna that can also
handle TX power up to 50-80 watts (I have a small mobile amp.
for 2m) might work.

Either of these two recently posted antennas suitable?
Diamond Mobile Antenna Model CR320A 2/440
Infoman 50-512mhz Scanner antenna

Thanks & 73, DavidC K1YP

1466. Drake Gear FS/Trade

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-24 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <381395f8.178193831@news.mindspring.com>
Source record: 95745
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment,alt.ham-radio.marketplace

I'm thinning out the collection some, and have the following stations for sale or trade. All have been in service in my station. I prefer trades, so what have you got?

1. B-Line: R-4B, T-4XB, AC-4, MS-4, Original Manuals, Drake Boxes.

This is a nice B-line and works great. It is in cosmetically Good to Very Good condition. It was back to Drake for service in the past 5 years. Front panel perfect on both rigs. No scratches on top or sides of cabinets. Some small chips on front edge of T-4XB. The R-4B calibrator does not work properly for some reason. I have not torn into it to see why. Everything else works as it should. Chassis are a little dusty, and have some pitting as is common with these rigs. The T-4XB works great and is putting out 90-100 watts on 40 meters.

Price: $500 plus shipping, or prefer trades (See List Below)

2. C-Line: R-4C, T-4XC, AC-4, MS-4, Original manuals.

This is my extra C-line and it is a nice one. The R-4C is one of the highly sought after early models that has a tube lineup similar to the R-4B (4position mode switch). It has extra crystals for 160, 17, 12 and 10 meters. The T-4XC has full output and has extra crystals also. Complete with AC-4, MS-4, original manuals and Interconnect cables. It is a great station.

Price: $600 plus shipping, or prefer trades (See List Below)

3. TR-4Cw, RV-4C, AC-4, Original Manual TR-4Cw, Copy of RV-4C manual

Very nice both cosmetically and electrically. Front edge of the TR-4Cw's cabinet has a few small nicks, but does not detract from the radio. The RV-4C is as close to mint that I have seen. Full output.

Price: $600 plus shipping, or prefer trades (See List Below)

I am interested in trading for any of the following: Collins S1-Line equipment, S3-Line equipment, 75A4, 30L1, KWM-2/2A. Kenwood 930Sat, 940Sat, 830S. Yaesu FT-900, FT-990. Hallicrafters SX-115. Drake L-4B, R-8. As you can see I am open to almost any HF gear. If you have something you want to trade, let me know.

Note on Shipping: I ship via UPS, and will ship each piece of equipment separately, double boxed. Lots of bubble wrap and peanuts. You will only pay what the UPS cost is. No "packing" charge.

You can see pictures of this gear in my shack on my web page below
<http://www.mindspring.com/~ekugrad/Index.html>

Thanks and 73

Brian K. Nicoll wrote:

They are pretty close as far as looks , features overall, but the 830 has a couple extra receiver goodies.
The 830 has VBT "variable bandwidth tuning" and IF shift , and notch. The 530 doesn't have VBT, and I think it's missing either the if shift or notch. I kinda think it's the if shift it's missing. I kinda think the 530 does have notch, but I'd have to double check. The transmitter sections between the two rigs, are pretty much identical. The 830 gives the option of filters in both IF's. I'm not sure the 530 does or not. Either rig is a good solid performer, but I prefer the 830 for the extra receiver goodies. The 830 receiver is outstanding as far as overall use, even compared to some of the newer stuff out. I have a 830 here, with the 500 hz 455 CW filter. With the VBT, I can narrow from the standard 500 hz down to 150 hz, just with that one filter. In ssb, I can narrow from the standard 2400 hz down to 500 hz. So a 830 makes a fairly decent cw rig, even with NO cw filters just using the VBT. You can't so this on the 530. Also either rig has very good audio quality, both transmit and receive. I hate to let loose of mine, just cuz it sounds so nice and mellow on ssb. One thing I sure do recommend if you get either one, is to find a VFO-230 to match. The stabilty of the vfo-230 is rock steady, unlike the l/c vfo in the rig itself. The internal vfo drifts a bit with temp changes. The vfo-230 will stay in the same spot for months at a time. Same stability you would have on a 930-940 etc. Actually with the 830 and the vfo-230, the overall feel of the rig, is like a "hybrid" tube final TS930. The vfo-230 gives a few memories also. I'd go for the 830 if possible. It's the "King" of the old kenwood hybrid rigs. But the TS 530 no slouch. It's fine for casual yik yakking. And the vfo-230 will work with it also. MK

Clean Your Shack -- Empty The Packed Boxes -- Convince Yourself You're Finally Going to Get Organized, Make Room For Things You Will Buy At This AUCTION!! AND, let the Dallas Amateur Radio Club help with your project! DONATION and AUCTION information are included in this message.

It's that time of year again! The Dallas Amateur Radio Club is ready to host another of its famous DARC Annual Auction events and is seeking donations to this event. If you are located anywhere in the Dallas / Fort Worth metroplex and you have equipment to donate for the auction, please contact:

Bob Peters (leave a voice mail) at 877-753-9577 or email: soundimp@pobox.com; or Kim Walker at (pager) 214-816-2743 or email at W5TIT@w5fc.org

Donations will be accepted all the way through 8:00AM on the morning of the auction! Please call early, like NOW, to get your items picked up--we have warehouse room for storage!

***** ALL DONATIONS ARE TAX DEDUCTIBLE *****

Receipts will be available for your donation to this not-for-profit organization!
*****NO COMPUTERS*****
We truly thank you for your thoughts but, please, no computers or computer equipment!

!! THEN, THE AUCTION !!

When: Saturday, Feb. 19, 2000
Time: Doors open at 6:00AM, AUCTION begins 8:00AM sharp.
Place: Calvary Family Church
Address: 801 W. Kearney, Mesquite, TX

This is the Dallas Amateur Radio Club's largest single fundraiser every year. Help us make this an even greater success than any other year!
Contact:

Bob Peters (leave a voice mail) at 877-753-9577 or email: soundimp@pobox.com; or Kim Walker at (pager) 214-816-2743 or email at W5TIT@w5fc.org

While you're on the phone with them, ask for the replacement power switch. Accidental power-on is a notorious problem and they came up with a lower profile button to solve it. Greatly reduces or eliminates the problem.

Hello,

I use Gornan Vlaski's software to up load and download information to my IC-Q7a. It works great! If the out of band transmit modification is performed on the IC-Q7a, will his software still work for uploads and downloads? I have heard rumors that if you perform this mod, it disables this feature. True or not?

Thanks,

Jim....

Thanks for the info. There ought to be a law against ham gluing ham gear.
Guess I was too familiar
screws on the ICOMs. Didn't even think if the case could be opened before I
bought just naked battery
pack.

I'll put the pack in the freezer and hope that makes the glue more brittle
before I start tapping and prying.

BTW, I have a pack on an Alinco that just snaps together. On the side that
mounts on the HT are 2 small
rectangular holes. Carefully push in a screwdriver and the case opens.

From: Ron Grandmaison <grandmaison@sjv.net>
Message-ID: <381334f3@News.Destek.net>
Source record: 95812

I just purchased a TS-570D(G). On 40 meter SSB the transmit frequency is off by 40 Hz, causing people to tune down by as much in order to get good audio from my station. This is not a problem on my receive when I tune someone in. This is not a problem on any other band. I don't have the technical manual for the radio, so does anyone know what to tweak to bring the LSB on frequency on 40 meters? I've checked every menu, including RIT/XIT and everything is adjusted properly. Please reply to grandmaison@sjv.net.

TNX,
>PLS REPLY VIA EMAIL/
>
>HOWARD

That is true... although, judging by the LARGE amounts of "10 meter" mobiles I see on the market I often wonder myself. I mean, first off, 90% of these so called "10 meter" mobiles and bases come with roger beeps AND echo mikes... what amateur radio operator, er, let me rephrase, what GOOD amateur radio operator would use an echo mike on 10 meters? Ranger Communications just came out with a new base radio called the RCI-2990. This radio covers 24MHz to 32MHz with TX in both the 12 and 10 meter bands and it also comes with the echo mike and roger beep so you know this radio is really meant to be a CB and I'm sure it's easily modified to rx and tx on all frequencies between 24 and 32 MHz. This thing sells for a MSRP of over $600! I think if I wanted to get on HF, even if I was only limited to 10 meters for voice, I would just buy a used HF rig that covered everything for that price.

Another thing, about a year ago I was listening to some guys in Phoenix talking on channel 35 LSB using the CB in my truck and one guy was complaining about an amateur radio operator that wouldn't sell him a used HF rig he had for sale because the guy didn't have a license. I say good! That's one less person I have to worry about creeping up on 10 meters without a license.

Hi,

I'm considering to get a communication receiver, and I just can not be sure which one I should choose, ICOM R-10 or ICOM R-75. From their specification, both of them are all modes capable (of course, R-75 has extra S-AM and RTTY). The sensitivity and the selectivity of both of them are also comparable with each other. Could you please give me some suggestions? Your comments and opinions would be greatly appreciated.

Regards
Tao

From: Keith Hester <ks9c@chorus.net>
Message-ID: <381348D3.EFDB5287@chorus.net>
Source record: 95820

Hi Ron,

Unless the TS-570 contains circuitry that is considerably different from that of other Kenwood rigs, my initial response to your description of events is that it just doesn't 'compute'. I should state, however, that I have no personal acquaintance with this particular rig!

It would be difficult for an 'error' of this nature to appear only on a single band. Also, it would be very unusual for the transmit and receive frequencies to get out-of-sync without either the RIT or XIT functions being engaged. By this I mean to say that whether the actual indicated frequencies are correct or not, whatever frequency is actually being received, the same carrier frequency (suppressed or otherwise) should be transmitted. An error between dial and transmitted/received frequencies would become increasingly more obvious the higher the frequency (e.g., a 10Hz error on 80 meters would become an approximate 80HZ error on 10 meters). An error of this nature is readily corrected by adjusting the trimmer associated with the master oscillator (probably operating at 20MHz).

You have described an intriguing situation and I'd be most interested in hearing how it is resolved.

73,
Keith (KS9C)

Indeed, the problem may be the internal lithium battery, as I generally tend to store the radio with the external battery pack off. I carry mine around in a backpack, and found that with the battery pack on, the radio often switches itself on, the power on key being terribly sensitive. I will indeed contact Yaesu, as this is one female who is not terribly handy with a soldering iron. Hopefully they can advise me as to where/how I can get the lithium replaced.

> hearing from owners of this HT.

I have the THG-71A for the past year. It is a great HT and seems to have
better intermod rejection than some other HT's on the market. I also have a
fellow Ham friend who has the FT-50 which he likes very much. The FT-50 has
a wider receive range than the THG-71A. So if you like to scan the public
service bands the FT-50 may be a better rig in that case. All in all I do
not think that you can go wrong with either HT, both are very good.

A good matching amplifier for either HT is a Mirage BD-35 dual band (45W on
2m and 35W on 70cm, auto switching) for around $160 new.

Mirage Amplifiers:
http://www.mirageamp.com/amplifiers/bd35.html

I run my THG-71A as a mobile rig using the above amplifier and a luggage
rack mounted dual band high gain antenna (4.5dbi on 2m and 7.2dbi on 70cm)
from Coment. The closest thing that Coment currently manufactures that is
equivalent to the model I have (which is discontinued) would be a Z780. To
make using the HT easy and safer (for me anyway) to use in a mobile setting
I also use the Kenwood HMC-3 VOX headset (about $60) which is made to work
with their HT's. You can also bypass the VOX and use the in-line PTT switch.
If I recall correctly, Kenwood also makes a speaker mike for it too.

As far as I know Yaesu does not make a VOX headset for their HT's.

For some info on the FT-50 check out this URL:
http://members.aol.com/aeimn/ft50/

For the THG-71A mod's check out the following URL:

"Brian K. Nicoll" wrote:

Hi Brian -- the TS-830S was the top of the line Kenwood back in the eaely 80's. Used by many DXers. Considered by many as one of Kenwoods finest. As I recall the TS530S was a middle of the line offering. For some more pics -- see URL:
http://www.firstname.com/kenwood/

AND FOR THE TS-830S Pics
http://www.bcn.net/~daveg/metal/ts830.htm

Also see K7ON site for Radio Specifications -- Choosing a Radio By Steve Ford WB8IMY Via K7ON -- Click on Rigs
I think there was Kenwood reviews there. Site is down right now -- so can't check it.
Try URL:
http://www.qex.net/k7on/

I seem to recall the TS830S operated off of 117V ac. Not sure of the TS-530S

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $12
12 volt 7AH --- $13

I have only a few 4's and 6's and about 36 of the 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

IC 24AT dual Band H/H

Unit will not work from battery pack.

Battery pack measures full voltage.

Bottom pins from 24AT show correct voltage
when external power is used.

Batteries are being charged but the unit will not
draw power from the battery pack.

Any thoughts ??

regards

Alan

By "tested Good" are you testing amp hour capacity?
Every Gel-cell I've measured from the alarm systems has always have SEVERE

amp hour degradation. (I've tested Yuasa, Johnson Controls, and
Panasonic.)

1527. FS: Drake MN-75 tuner and MS-4 speaker

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-24 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19991023213541.20100.00000469@ng-cm1.aol.com>
Source record: 95873

Have for sale an MN-75 tuner. Excellent condition, a "9" I'd say. 1.8-30 Mhz including WARC. Rated at 200 watts but suspect it will take more. Includes built-in wattmeter and antenna switch. Inside is beautiful too, no arcing, pitting, or discoloration of contacts. $85 plus UPS shipping, conus only.

MS-4 has a beautiful front grill, but case has some scratches and could use a repaint. $40 plus UPS, conus only.

Thanks for reading the ad.

I've gotten glued packs apart by freezing them then rapping sharply
along the joints. Sure is easier with the older Icoms - just take the
screws out.

they are glued.
sometimes you can squeeze along the seam and pop it but the cells are often glued to the inside of the pack.i have yet to see one i could not open but they sometimes get buggered up some.

Also the Kenwood TS-811.

1547. ICOM vs Kenwood

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-25 00:00:00 UTC
From: dave717962@aol.com
Message-ID: <19991025165433.17645.00000938@ng-cm1.aol.com>
Source record: 95693

Anyone got any opinions on the Kenwood 570s vs. the Icom 706mkII?? These rigs fit my price range and I cant decide which would make the best choice.

Thanks!

1548. AP-10 Apartment Ant.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-25 00:00:00 UTC
From: elthznd901@aol.com
Message-ID: <19991025170858.20096.00000906@ng-cm1.aol.com>
Source record: 95694

I was looking for a small antenna for my apartment and came across the AP-10 by B&W. Anyone have any experience or opinions of this antenna? Its a 52" whip that connects to a clamp out of your window, and is usable between 40 and 2 meters! Doesnt sound bad for us apartment dwellers!! Any opinions on this antenna would be great!

1549. Info: Yaesu FC-757 Auto Antenna Tuner

Hi,
Looking for hookup information to use the FC-757 auto antenna
tuner with Non-Yaesu transceiver. Have no information, no book,
etc.

Also, Willing to pay $ for a copy of the manual.

thanks,
Joe K7JOE

John, keep us informed when these products hits your shelf!

There's a (pretty skimpy on details, specs on only one rig)
web page on the RF Limited "Magnum" Series 10 meter rigs at:
http://www.rflimited.com/Amateur%20Radio/10%20Meter/10Meter.htm

Looks like the '257' has been renamed to 'Delta Force'...

Not meant to start another thread on ebay, but this type of thing is unscrupulous at best:

RARE HEATH HW-101 SB-101 CB 11 METER CRYSTAL!
Item #182756483
Expand the capabilities, value and resale value of your Heath HW-100, HW-101, SB-100, SB-101, SB-102 with this Magic Crystal. Simply remove the 10 meter crystal from your rig and install this crystal and you have 27 MHz operation (the 'beat' frequency of this crystal is
37.39500 MHz). You can transceive on SSB or CW on 11 Meters! Even install it to increase the resale value of the transceiver by magnitudes to a CB'er! Crystal is Brand New! Buyer prepays with shipping within 7 days of auction close.

I've sent a note to SafeHarbor@ebay.com about this, but wonder if anyone would like to comment
on the legalities of this.

Of course, you can buy an exact duplicate of this rock from International Crystal and other manufacturers for 25 bucks or less. I say Caveat Emptor. Plenty of nuts out there with too much money they need to be separated from and E-Bay is the place to do it.

Date: 1999-10-25 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s1a4fb27gbb32@freenews.remarq.com>
Source record: 95710

Where is this E-mail address located, please?
Just curious as I've never seen one like it before.

BTW: Here in America such an amplifier would require a
special commercial FCC license. Broadcasts of any sort within
the commercial FM band are either commercial or limited to
milliwatts for tiny distances (e.g. within a room or perhaps a
building) so as not to interefere with licensed radio broadcasts.

Thanks! & 73, DavidC K1YP

From: wbg <wgifford@inreach.com>
Message-ID: <KX8R3.2667$n51.93158@news.inreach.com>
Source record: 95712

I have found the radio to be a good solid performer, the extended rx mod brings it up to par with the ft50's rx capabilities (I think). It has survived several falls from considerable heights (one of which broke the SMA connector)... one call to Kenwood's parts distributor got me a new SMA connector which was very easy to replace compared to some BNC connectors I have tried to fix...
The radio seems to tolerate 13.8v high power output VERY well especially if you remove the battery, allowing the die cast case to radiate heat. I also own the TMV7A but I haven't explored the TMV7A specific remote control functions Kenwood mentioned in their literature, perhaps someone else on the NG can elaborate??? I get excellent signal reports from all the high level repeaters in my area and I have no complaints on the radios performance. I did buy a Diamond thin wire type duck which improved the wide band receive sensitivity AND seems to have marginally improved the already excellent tx performance. Battery life is excellent with the 6.0 volt battery and decent with the 9.6, I will be getting a Maha 9.6 soon though. My only beef? The print on the buttons is already wearing off after less than a year of use- but I suppose thats a problem with ALL manufactures ..
One other thing to consider, Yaesu charges for their programming software and Kenwood gives it away...

1574. Yaesu 5100 Mod Question

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-25 00:00:00 UTC
From: jmtsr@mindspring.com
Message-ID: <3813aaae.105612426@news.mindspring.com>
Source record: 95755

I just did the extended receive mod on the Yaesu 5100. When I turned it on after the mod to set the limits it will only let me set the UHF limits, but not the VHF.. it gets through with the UHF, and that's it. The VHF side is very limited. I have double checked the Mod instructions with the jumpers, etc..

The mod said when the unit was turned back on, you would see:

300.000 & 20.000

I get :

300.000 & 144.000

I have also tried the D/MR, F/W, REV, while turning on the radio, but still get the same 300.00 & 144.000.
What could be wrong?.. It will only set the limits for the UHF... anyone else run into this problem?

Here's my Jumpered list:

R4001
R4003
R4004
R4051
R4061
R4062
R4064
R4068
R4070
R4072

R4072 was unsoldered and jumpered.
R4067 was unjumpered for Band Switching. I replaced this, but still get the same results.
The only thing that I did , that the instructions didn't mention was I removed the head from the two ribbons connecting the control head.... didn't know if by removing one of the jumpers it reset the radio in some way, and that could be one reason, since the ribbons were not plugged in at the time of the Mod?

Thanks for any help.

re: wanted... Heathkit SB-200 parts (HV board and whatever)

Hello there,

I'm trying to repair a Heathkit SB-200 amplifier, struck by the golden screwdriver (previous owners). If you have a spare HV pc board (not a charcoal brickette) from a repair or Harbach upgrade, I'd like to buy your old board. As long as it's in most any reasonable shape (no holes larger than a pencil eraser...)

Please contact me at the address below my name if you can help.

thanks

Take your trusty ohm meter and see if there is a short between the
minus (-) terminal and the E terminal. If not then the DC jack is
open. There two terminals must be shorted internally for the radio to
operate from the battery.

Source record: 95778

Without trying to sound like a smartass, you won't find one, it's illegal.

Seriously, CB sets are prohibited from working with more than the 'assigned channels'. When they were 23 channel, and there were actually legitmate users above channel 23, the rule was you had to GIVE UP CB channels to get to the other channels. 23 total, period. When they went to 40 the rule was moot.

They are allowed to receive WX though.

But they still only transmit on the 40 assigned channels.

As to HAM gear, it will only work where assigned. (And yes, I am aware of all the 'hacks'.) But when a radio is for HAM, and it's 'opened up', then it's not 'legal'. Radios for other services that are placed on HAM are legal, but no longer legal for their 'other' service.

Trade even up: Viking Valiant 1 for Hallicrafters SR-150 or 400 with power supply/speaker, in like condition.

Freshly tubed, solid state modules in place of 846's. Front panel is exceptionally
nice; nearly mint. A few scratches and minor knicks on the upper lip.
Only draw back, someone widened out the right hand manual/ptt
switch hole. An on/off flange hides the flaw nicely. All knobs and inserts intact and like new. Crystal knob cover is there. Lettering perfect. VFO is beautiful.
The maroon cabinet has been painted, not a perfect job, but not bad.
Has a transmit-receive relay built in.

Let me know what you have!

Regards,

Cary Fries
cfries@tic.bisman.com

Ramsey sells one-it's the LPA-1.
NOTE:the Ramsey transmitters are a bit "dirty"(harmonics.spurious, etc),
so make sure you put a filter in between the transmitter and the
amplifier.

Top of the line is an IC-475. I would have one myself if I weren't such
a cheapskate.

1606. FOR SALE HQ170

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-25 00:00:00 UTC
From: stevem <wb9tow@egr.msu.edu>
Message-ID: <38149D06.EB8F4F1B@egr.msu.edu>
Source record: 95787

I still have a nice HQ170 receiver. It has a internal 6m preamp install.

(Nothing that cant be removed).
It is excellent on the front pannel, slight top scratches.
$200 or trade
vri 73 steve

1607. Re: HELP? Single Mobile Antenna or Two Needed?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-25 00:00:00 UTC
From: Dick Elliott <elliottk@netusa1.net>
Message-ID: <7v27fs$ht6$1@news.netusa1.net>
Source record: 95788
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner

Hello David. N9IPA here. Name is Dick Elliott. I have been a Ham since 1987. Before that I was heaving into scanning. Antennas for listening at that time was always my concern. Since 1974 I have tried several commercial antennas for my car and for my home. Of course as with any vertical antenna height is important. With a mobile set up height is important also. How high is high on a car. about 15 foot. but to look good stick with the diamonds you mentioned. I have one diamond, a dual band, for my FT8100R, I use my first mobile antenna, a hustler 2m 5/8 w for scanning in the car. Works great on all bands. Do not fall for the company that says more db gain.......for listening......all you need is a 1/4 wave. I prefer my 2m 5/8 w because during storm watch I can use it for a back up on 2m. Right now my BC245xlt is using an 800mhz cellphone antenna for listening. when I go into Canada I hook up a big bag phone because the big bag phones work better in Canada than the pocket cell phones. Over the years I have experimented with all sorts of "listening" antennas for my scanners. I have used a paper clip and found that local transmissions were good for about 10 miles. I have used a paper clip attached to a coax and ran it up to the attic.............can not tell the difference between that paper clip and a quarter wave mag-mount on the duct runs.........for listening and for 2m/70cm use during storms. I used two scanners and heard the same traffic on each unit at the same time. I heard surrounding counties with no problem......so save your money for the shack scanners use some coat hangers and a bnc connector and make your own listening antennas, and put a good one on the car. You will be happy.......73....Dick Elliott.........

Hi,

I have an IC-706MKII mounted in my Jeep. It is great. I would choose it over any other rig of its type. For base use, however, I would recommend against it. Go with a full size radio. Why pay the premium for an small radio when you do not need to. A full size radio is much easier to use due to the front panel real estate available. I am unfamiliar with the Kenwood radio you mentioned, but an Icom 746 would be my choice.

FWIW,

Are you sure about that? I am under the impression that a modified Ham rig
is legal (excluding the cell phone issue) while you can't transmit on a
frequency (due to modifications) where you are not licensed to do so.

Not a very fair comparison in most areas - there is a VAST difference
in relative size, with a corresponding difference in ease of operation
underway - most all of the 570 controls are readily and easily
accessable directly on the front panel, while most of the 706 features
must be accessed via multi-level menus - not easy or fun while in
motion in GOOD circumstances, let alone nighttime or poor weather!
Also, the 570's builtin antenna tuner is an excellent built-in feature
that operates uncommonly well, and permits deviations in SWR that will
either shut the 706 down, or at least greatly reduce its power output.
BUT, if size is the promary consideration, as well as the extended
band coverage the upper range of 706IIG's provide, they WILL do an
excellent job!

1619. how SET clock on this radio?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-26 00:00:00 UTC
From: mcalhoun@ksu.edu
Message-ID: <7v4n4l$mtn@unix1.cc.ksu.edu>
Source record: 95650
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Here's hoping someone will know how to set the clock on an old Sears
"AUTO REVERSE AM/FM STEREO 6 + 18 MEMORY" (written on cassette flap)
car radio (Model 643.509510) which I recently bought at a junk store.
It's so old that Sears Parts 800-number can't find anything about it.

The radio has a very heavy-duty feel and is removeable (by pulling on a
handle) from a plug-in "chassis". In addition to the three power (+12V,
GROUND, and CLOCK) and four (LEFT and RIGHT/FRONT and REAR) speaker wires
(all nicely labeled, so it was trivial to hook-up) and the antenna input,
there are two tiny coaxes (labeled LEFT and RIGHT) with RCA jacks.

FIRST QUESTION: are these liable to be
INPUTS (from some unspecified external device)
or OUTPUTS (to an amplifier, perhaps?)

The radio retains all memory-bank frequencies and the clock time when
it is removed from its "chassis".

On the front panel, in addition to the tape cassette hole (covered by
the flap mentioned above) and three buttons (EJECT and two labeled
PROG--probably direction? I haven't tried a tape yet) for the tape
player, it has:

CD - (input jack) - presumably (I haven't tried it yet)
an "auxiliary input"
ON/VOL - (rotary) - obvious use
FAD - (rotary) - "fades" sound from front to rear speakers
TONE - (slide) - obvious use
BALANCE - (slide) - "fades" sound from left to right speakers
All the rest are pushbutton switches:
BND - selects AM or FM or, in memory mode,
selects between AM to FM1, FM2, FM3 memory banks
M/S - selects between Mono and Stereo
RCL - Recall CLock?? replaces frequency with clocktime in display
for about 5 seconds or, if clocktime is showing, returns to
frequency display
ME - MEmory - used for storing dial frequency in one of six memories
1 thru 6 - memory-recall buttons
^ and v - changes dial frequency up or down
AS - Automatic Scan - scans entire frequency range starting with dial
frequency and stores six stations in memory (selection criteria
unknown--maybe the next strongest six?), and returns to the
original dial frequency.
PS - Programmed memory Scan - scans through current memory bank,
pausing about 5 seconds on each channel

first six

SECOND QUESTION: How do I SET the clock????

Suggestions will be appreciated.

"Eugene Skopal" <AE2F@QSL.NET> writes:
>"Deep Cycle" batteries are much better for ham use that a regular car
>battery....
>....[snip]....

THAT ALL DEPENDS on several things, including the actual application!!!
In no particular order:

Deep-cycle batteries are usually considerally more expensive than
"regular" automobile batteries.

A nominal 12-volt deep-cycle battery is still WITHIN specs when its
output voltage is much MUCH lower than 12 volts (my memory says 8 V).
Many "12-volt" radios (my Ten Tec Model 540/Triton IV included) simply
will NOT operate on such low input.

From a Ford Motor Company's video tape TAKING CHARGE: UNDERSTANDING
AUTOMOBILE BATTERIES circa 1989: A "regular" auto battery can be deeply
discharged "at most 20 to 30 times" before permanent damage results. My
shack has been running on float-charged "regular" auto batterys since
1975 (almost 25 years!), and I've NEVER had that "at most" situation.
After all, how many long-term power outages do most places get in the
3-5 year life of the average battery?

If you like to operate from the boonies (as I occasionally do), and
assuming you don't operate ALL the time, just carry a solar panel for
recharging. Or operate QRP ....!

CONCLUSIONS:
1) Buy a "regular" auto battery for your shack every few years (they
don't last as long in the shack as in a vehicle--the electrolye
needs to be shaken/mixed more often than earthquakes shake my desk
in Kansas!)
2) Spend the difference the first time on a good battery maintainer/
charger
3) Spend the difference the remaining times on your spouse--it makes
for better relations.

Dana Gertsch <dgertsch@pecantree.recom.com> writes:
>If a battery has 605 cranking amps, and 205 reserve amps, how can I
>determine my amp/hours?

>What is the relationship to cold cranking amps and amp hours? Are they
>one and the same or is there some type of formula to figure it out.

Abstracted from a Ford Motor Company video TAKING CHARGE: UNDERSTANDING
AUTOMOBILE BATTERIES circa 1989:

---------- cut here ---------- cut here ---------- cut here ----------

CONVERTING BETWEEN RATINGS

Although CCA, 20-hour capacity, and reserve capacity measure different aspects
of battery performance, for Ford original-equipment (and, maybe, other?)
lead/acid batteries, there are some APPROXIMATE conversions between them:

CCA divided by 10 gives the approximate 20-hour capacity:
thus a 580 CCA battery should rate about 58 Ampere-hours.

20-hour rating divided by 0.6 gives the approximate reserve capacity
IN MINUTES: thus 58 Ampere-hours divided by 0.6 gives about 100 minutes.

Thus, if you know any one of these three ratings, you can calculate the
approximate values of the other two.

---------- cut here ---------- cut here ---------- cut here ----------

On Thu, 21 Oct 1999 22:43:22 -0600, in rec.radio.amateur.equipment,
Mary-Frances Bartels <ki0dz@qsl.net> wrote:

> I am considering purchasing the TH-G71A. The other rig I am
>considering is a Yaesu FT-50. I have been able to find plenty of "real
>world" information for the Yaesu on the Internet, but precious little on
>the Kenwood. Both rigs seem to be quite similar in their objectives as

Mary-Frances: I recently decided to get a dual band HT. I compared
the Kenwood G71A, the Yaesu FT-50, and the Icom T7H and W32.
Initially I was inclined towards one of the Icoms, because I already
own an Icom 02AT 2m handheld I bought in 1983, which still works
perfectly. Also, Icom is right here in the Seattle area.

I downloaded the QST reviews of all the above models, and used Deja
News to search newsgroups for user comments over the last couple of
years. What I saw made me change my mind about the Icoms.

Seattle is a fairly RF-intensive area, so intermodulation resistance
is very important to me. The Icoms had the worst intermod performance
of the 4 models. This eliminated them. In their favor, the T7H is
very easy to use (I didn't need to read the manual to set it up and
use it), and the W32 has simultaneous dual-band receive at a lower
price than other HTs with this feature. I also really like their
style and feel in the hand.

This left the two radios you're considering. The FT-50 is a little
smaller and has more wideband receive out of the box. It also has
very small keys. Since I have very big hands, this was a serious
problem. It was quite a bit harder to program (from the keypad), and
a bit harder to use than the Kenwood. User comments about intermod
indicated that the FT-50 sometimes folded in high-RF environments.
The QST figures bore this out. The FT-50 has a useful 1-watt power
setting, for a total of 4 power levels with the high-power
battery--most other radios have 2 or 3. If you want bells and
whistles, the FT-50 is the radio to get. Also, there is a lot of
third-party software for the Yaesu.

My choice ended up being the Kenwood G71. User reports say it is
very rugged. It has the best 2m intermod resistance of the bunch.
It has the best supplied antenna as well. It is very easy to use. It
is significantly easier to program from the keypad than the FT-50.
The PC software to program the radio is free on the internet (you have
to buy the cable only). The keys can be illuminated as well as the
LCD display--very useful at night.

One thing I hated about the G71 was that its batteries have little tabs at the bottom that stick out to the side. They also stick into my hand during use. These tabs give the rig stability in Kenwood's rapid charger. Since I use a Maha charger, I don't need the tabs. So I filed them off!

There is a simple modification (clip one diode) that opens up the G71's receive to the usual scanner-oriented frequencies, but the FT-50 has more. The FT-50 can even receive broadcast FM, but at very lousy audio quality even for just speech. You can download the complete G71 manual, the wide receive modification instructions, and other information off Kenwood's Web site, and read them at home, not just under the pressure and distraction of a radio store. This is an excellent sales tool--other manufacturers take note!

My recommendations--if you want bells and whistles and the ability to program every single one, if you want to scan every frequency imaginable outside the ham bands, get the FT-50. Don't get it if you have large hands or live in a high-RF environment prone to 2m intermod.

If you want top-notch basic receive performance and ease of use, with still quite respectable programmability, and all the features most of us will use, get the G71. And if you do, get a second Maha NiMH battery for it. I have the 6v 1800 mah battery, which is almost impossible to drain in a day's use. If you need the full five watts, Maha makes a 9.6v 1050 mah battery.

Bottom line is that either the G71 or the FT-50 are excellent radios. They have very different personalities, and which is best depends on what you want from them, how big your hands are, and whether or not you live in a high-intermod area.

Hope this helps!

I saw that too, and had to chuckle. It's not illegal to install
such a crystal, or to receive CB transmissions with the radio
once it's been modified. It's illegal to transmit, however.
Still, it's silly!

>over cost at the dealer location. Is this true?..."
These crack smokers haven't seen a dealer cost since 1967. FULL LIST price isn't even 100% over dealer cost. Anyone who knows dealer cost will tell you 8 to 12% is what retailers get. Electronics in general has the lowest margins in retail, and Amateur radio which is mostly mail order & fleamarket must be at the bottom of the margin.

Message-ID: <38161B55.1DE63E2D@nh.ultranet.com>
Source record: 95663

I am looking to get a desktop mic soon and was wondering what others
with
or without the Yaesu FT-920 would recommend. I have looked at Heil,
Astatic,
Adonis, Premier, Yaesu. I operate both DX and domestic/local ragchew.
Would like some control over tone. I don't care about meters, echo
effects, etc.
I do like the idea of something capable of giving "natural" sounding
audio.
I would like to stay in the neighborhood of $150.00 or less.

Any response(s) would be appreciated.

Robert Kershaw, KG4ASZ (NOSPAM_kg4asz@arrl.net) wrote:
<Nice report deleted>
:
: In my opinion, the Diamond has a edge over the Comet antenna. I like
: the Comet for the reasons I mentioned above, and I like the Diamond
: because the performance appears to be better.

: Question I have:
: - Diamond quotes performance as 3.5/6.0 dBd and Comet quotes 3.0/5.5
: dBi. What is the difference between dBd and dBi?

As a previous poster said, dBd is based on a dipole reference, dBi is based on a theoretical "isotropic" radiator (point source). Further, the antenna gain quoted in dBi should numerically be about 2.1 higher than the gain in quoted in dBd, because a dipole has gain relative to the isotropic radiator. It's a fixed relationship.

So, you can see that manufacturers would like to quote dBi to get the numbers up. From the numbers you gave, the Diamond antenna would have a spec of about 5.6/8.1 dBi.

It is my belief that, basically, the gain figures some and perhaps most manufacturers quote are mostly crap and marketing fluff and are only very roughly useful. It appears that sometimes they write "dBd" when they really mean "dBi". Without a detailed explanation of how they arrived at those figures, they aren't much good for comparing one manufacturer to the next. One would presume that they would be useful as a comparison *within* a manufacturer's product line.

Remember that antenna gain just means that the energy is redirected into a somehow more focused pattern that is hopefully aimed at what you're trying to connect to. There is no net increase in energy; no amplification is involved. With a vertical antenna, it generally means a flatter pattern, but equal in all compass directions. The flatness factor is called the "angle of radiation". With a yagi, it's mostly directed in one general compass direction; the "beamwidth" specifies how tight this is.

Thanks for the nice report!

: 73 de ki0dz

I apologize if you've already rejected this, but take a look at the VX5-R from Yaesu. I do not have one, but the size and Li-ion battery and features seem VERY attractive. I've checked out my friend's radio and was duly impressed. He sold his FT-50 to get this. The keys are bigger, and the display is easier to read than the FT-50.

I do applaud Kenwood for FINALLY making a radio that isn't an "intermod" sponge and is more straightforward to program and use. And is rugged as well.

Not sure of the exact question, but most radio services except ham and maybe mars and cap services radios have to be type accepted. Some ham radios will work just as well as the type accepted radios when they are modified to the other frequencies. While you can have them, it is not legal to transmit on them in other services even if you are licensed.

A case like this is if you are a volunteer fireman and modify a 2 meter transceiver to the fire frequency. It is legal to have it, but you can not transmit with it on the fire frequency even though you have the legal right to use the fire frequency. The modified ham rig is not type accepted. If you have a radio that is type accepted and it has the ham frequencies in it, then it is legal to use it for both services.

I recently bought a TM241A 2m mobile and didn't get a manual for it. I need to know the following:

1. How do you turn off the beep that you hear when you press a button or when it stops on a busy memory channel.
2. How do you toggle between carrier and timer mode when scanning.
3. How do you lockout memory channels.
4. What is the DR/DT button for.
5. How do you set upper/lower scanning frequencies when searching.

This info is the least I need. If you can provide me with a copy of the operating information from the manual I will reimburse you for all associated costs. Thanks for reading, John N0EE

1645. Re: How much mark-up on new HF equipment in US?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-26 00:00:00 UTC
From: Brian <none@worldnet.att.net>
Message-ID: <7v5ic3ldu1@bgtnsc02.worldnet.att.net>
Source record: 95676

Having worked for a ham gear dealer several years ago I can attest to the fact that most equipment has 10% or less markup. It's not at all uncommon for a dealer to make less than $100 on a $2000 piece of gear (particularly on the more popular pieces of equipment). The margins are a bit better on small accessories. Add in the cost of traveling to hamfests (no small amount), maintaining 800 numbers and keeping a storefront and one can appreciate how little profit there really is in the ham radio game. One only need notice the high failure rate for ham gear dealers over the years to realize that no one is getting rich in that business.

Hams tend to be a cheap lot (I can say that since I am one). Many hams don't think twice about asking the dealer to "pay the tax" on a purchase (would anyone even think of asking that same question at Best Buy or Circuit City?). If a dealer does so he likely will make little or nothing on the sale. Dealer loyalty also tends to go out the window when prices are concerned. Many hams ask their local dealer to support their club but some of the same people will order from a dealer in another state if they can save a few dollars.

I realize the above sounds like ranting and I guess in a way it is. Please don't misunderstand - I'm all for a capitalistic system in which price is determined by the marketplace. Further, there are certainly some less-than-reputable dealers out there who deserve their fate. However, in the long run it pays to be fair to the dealers who do right for you. They will be there to support you for a long time to come.

You need to get a bracket welded to your frame.

1659. MOTOROLA====>[MSF5000 TEST SET (New)]<=====

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-26 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <19991025204256.22618.00001567@ng-fi1.aol.com>
Source record: 95720

Yep:

I have a Like New Motorola MSF5000 TEST SET. Has the original box, instructions, and all acc'ys

Picture @

http://www2.4dcomm.com/metrotech/msfmeter.jpg

Meter is located in the upper center of the photo which has the Ribbon Cable and acc'y probes, and Meter is in the Center. A Must for Servicing and routine maintance on MSF5000 Repeaters.

Asking $155.00+ $8.00 for shipping and handling.

(Motorola's price is close to $400.00)

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

1662. Heath manuals and PS FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-26 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <nn7R3.3951$hK6.232572@monger.newsread.com>
Source record: 95723

Original Heath manuals for sale:

HN-31 A Dummy Load manual. Note the "A" suffix. This is for the newer model that does not have the tap for the scope. The manual is in the smaller "half size" format. This manual looks like new, and has NO check marks in it. $ 8

HD-1416 code oscillator manual. Looks like new, but does have check marks in it. $ 5

SB-600 speaker manual. Good shape. $ 6

Other Heath items:

Heath low voltage power supply. It is the Heath IP-27. It is a low voltage power supply, fully adjustable from about 0.5 Volts to 50 Volts. It also has current limiting that is built in and adjustable from a couple ma up to 1.5 amps. There is also a nice large meter for measuring current or voltage. The supply is "floating", so can be used for either plus or minus supplies. It is the "Heath Brown" color. Manual included. $100

I also have a few other original Heath manuals available:
GR-2000 TV Set $ 10
GR-2050 TV Set - Five book set $ 18
GRA-2000-1 TV Clock $ 3
GRA-601 TV Clock $ 5

All are in good shape.

Prices do not include shipping from Florida.

Thanks.

>They are a chemical device and start to age the day electolyte goes in.
>Float charging does not stop the aging process.

Actually, regarding reasonable quality Gel Cells, I would say 5 years
plus is more the figure, assuming no abuse of the battery during it's
life. Then the life really starts to plummet.

I have a 1997 Jeep Cherokee, and was surprised how quiet my ICOM 706MKII operates in it. I had a 1993 Toyota 4X4 pickup that was soooo noisy! Even with the NB on..it was very hard to copy anyone over all the static and noise. The IC-706MKII is so very quiet in the 1997 Jeep Cherokee. It pretty much sounds the same with the engine off as it does with it running... I couldn't be happier... with my newer Jeep.

Legal or not, there are tons of options for boosting power on
the Ramsey FM gear. Yes, they sell an amp for 'export' only,
but just browse the web. There are many sites devoted to
mods to the Ramsey transmitter. Some to clean up the audio,
change precomp, and even to boost power. Quite a bit in some
cases, but not quite to 1W.

1681. Re: Reconditioning Rayovac Renewal Alkaline Batteries?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-27 00:00:00 UTC
From: Jim Weir <jim@rst-engr.com>
Message-ID: <lE0XOEA1gxoTe=Aek+U9TCOjqXLK@4ax.com>
Source record: 95542

"DavidC" <eDoc@netzero.net>
shared these priceless pearls of wisdom:

->We have a collection of dead Rayovac Renewal Alkaline
->batteries that died when we didn't catch them before full
->discharge.

Smack 'em smartly with 10-12 volts through a 10 ohm current limiting resistor
for a few seconds, then quickly into the "stock" charger. "Smack" no more than
five or ten seconds at a whap.

1683. Help: HR-2600 adjustment

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-27 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <38175033.D7BC76D6@yahoo.com>
Source record: 95544
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi,
I have an HR-2600. When mode is in lower side band receive, the S-meter is showing an S9 "signal" with or with out an antenna connected on receive. I dont actually hear any carrier....just a deflecting S-meter.

USB, FM, AM, CW do not show any S-meter deflection unless a real external signal is present and the s-meter functions normally

My guess is that the carrier balance is out of adjust slightly.
Anyone have other thoughts or ideas?

Rig actually works fine (and I dont use LSB) but want to eliminate the deflecting s-meter issue.

thanks,
Joe

Source record: 95551

Folks,

I've run across an interesting problem, and have made a few observations. I'd appreciate any comments that you may have.

I was originally using an ICOM W32A hand-held in my mobile installation with a R/S dual-band 2m/70cm through-glass antenna system, and things were working quite well. No serious intermod in this area, and the popular repeaters were rather strong throughout the area of interest. I was then involved in a rather serious auto accident during which the through-glass antenna was destroyed (along with most of the rest of my 1998 Dodge Durango!) when I was hit broadside by a fast-moving car that blew through an intersection. At any rate, the radio wasn't hurt and I began using it in a back-up car (an Acura Integra) with a short mag-mount Larsen dual-band antenna. I wasn't really happy with the performance of that antenna, so I got an R/S 5/8-wave 2m mag-mount for that car. I suddenly had much worse reception from even the local repeaters -- when the antenna would sway, a great deal of white noise would develop in the signals. Even after I got the Durango back (2 months and $19k in repairs later - thank goodness for the other guy's insurance) I tried the 5/8 mag-mount on that vehicle and got the same sub-standard results. Many years ago I had a 5/8-wave Larsen mag-mount that I used in the greater LA area, and it never had problems of this type. I'm wondering why the use of a 5/8-wave antenna introduced such problems in the Albany, NY region. I eventually put another through-glass dual-band antenna on the Durango, and the reception returned to normal - no picket fencing or antenna-wag white noise. This seems strange to me. I was hoping to upgrade to a better gain antenna, but now I'm concerned that it will actually buy me trouble to do so.

How about the Yaesu FT100 for AM? Does it experience the same problems
> that the FT847 does?

I'm guessing here as I have not played with the FT-100, but I am assuming
it
is probably the same as the FT 847...same generation of radio!
You see...the radio manufacturers just don't give a hoot about AM mode
ameture radio com's, they use low level AM audio, and most of them are so
narrow banded, they are like Uniden 2510's, they sound like crap on the
receiving end...
The Icom 706 chassis, is one of the best sounding AM mode radios I have
experienced next to the old Yeasu 101E's and FT-990's!
It is a real talker. But it lacks from insuficient NB abilities(noisey AM
recieve).

Good luck on your decision...I'm thru with this thread!...over & out!

Did you set the Band Byte to 06 (freeband) and the Sub Band Byte to 04 (MARS/CAP) in the config menu? The Jumper Status is Resistor checked, JP1 checked, and JP2 and JP3 unchecked. I do not check Enable Wide TX. The radio will transmit in the 150 Mhz band and well into the 460 Mhz band. I have not tried anything higher or lower except of course two meters. Read his instructions and explanation of where the mod will allow transmit.

From: Richard Ferguson <raferguson@worldnet.att.net>
Message-ID: <3817A1A3.3DBEE45E@worldnet.att.net>
Source record: 95557

The arrangement described below is similar to that shown in the last issue of QST magazine. If you look under the car you will probably find a towhook or ring bolted to some substantial part of the car. You can bolt an arrangement as described below to those holes and have a solid arrangement. I would not weld on the car except as an absolute last resort.

By the way, I also use a trailer hitch mount, homemade, the hustler antenna ball sits right beside the trailer hitch ball. Made from 1/4 inch steel, it has outlasted a couple of cars and survived being rearended, no problem.

Hate to say it but I was ripped off by KR5V. He uses kn6m@aol.com
as an e-mail.

Morris J. Young
1340 Red Oak Trl
Fairview, TX 75069

The heck of it is it was for a small thing. I bought a Bird 43 from him
in new condition with the manual. He said after shipping it he had
several new manuals there but had to find one. Next he said if he
couldn't find one he would order me a new one from Bird and send it to
me.
Next he won't reply to my e-mails. This whole thing started on Aug 16th
1999.
To me it is now the principle of the thing. Anyone that would not keep
his end of the deal on something as small as a Bird 43 manual I would
for sure not trust to ever buy ANYTHING from again.
At this point all I can say is buyer beware when it comes to Morri.

It has a one touch "hm/rv" for checking the repeater input. The "moni" button on the side by the ptt is for unsquelching the radio in the advent of a weak signal or to temp. release any the tone squelch you may have engaged. The "moni" button is not for checking the input, only the output.

The 5/8 antenna has a far different pattern than a 1/4 antenna,
and it also presents a far greater wind resistance and tendency
to bend when in motion. BTW: Do you know if the mag mount
is strong enough or is it lifting a little at highway speeds?

Just a couple of thoughts to consider ...

Right. And wrong. Check page 5 of your operating manual. You'll
see from the table that [F/W]+ MON reverses tx/rx. This is useful
for those who (see page 65) have the HM/RV(EMG) key set to do the
HOME function instead of the REV function. See page 43 of the operating
manual for details.

I tried an Astatic D-104, a Yaesu MD-100, and a Kenwood MC-60 with my FT-920. The reports I got with the MC-60 were consistantly better than with the others regardless of various settings on the rig. A side benefit to the MC-60 is that it drives the radio better (much higher average SSB power) in the event you want to run an amp.

ICOM 706Mk II is your best bet for AM (CB type) audio.
Be aware that it is a little noisy on AM recieve, but it kicks ass on TX.

Kenwood, and the new Yaesu like FT847 type chassis, suck for AM quality audio. They sound fuzzy and narrow!

Have you considered the examples that HS gives in their literature and also on their website? I think the best mount, for me, would be the trailer hitch combo. I have a new Buick and plastic bumpers too. I have not, however, received permission from my Love Godess of 39 years to do that yet.

The U-400 has a 35 watt PA and is a UHF transceiver. You program it
by cloning the U-400 from a U-16 handheld transceiver. There also was
a small programming keyboard called the EX-494, but it is no longer
available. Look on www.icomamerica.com under Land Mobile dealers.
You should be able to find a local one who can program the radio for
you. The U-400 has 16 channels maximum.

Look in your local Yellow Pages under "welding". Have one of those shops weld a 1/4" x 1" or 1/4" x 1.50" or similar steel strap to the u-bracket under the car which is used to tie the car down during sea transport. Assuming the 626 was made in Japan. Take the base mount and mast with you and work out the design of the complete bracket with them. Most body shops can do the job too, but they don't usually have 1/4" thick steel laying around. Make sure they get the thing nice and vertical and are fully aware that the gas tank is in the immediate "neighborhood".

Funny this should come up - I am just taking one apart now!

The RF board looks to be the only 'useful' bit - not sure the patch antenna would go that far! I think the unit maybe more useful for data rather than narrowband work.

The board looks to have a computer controlled VCO and simple mixer and receiver/transmit stages coupled into a duplexer - the odd shaped copper block on the back.

At first look I would say that I doubt whether they will be of any use apart from the bits and there are very few of those. Mostly small gasfets of unknown origin.

If you do find some schematics would be interested in seeing what is actually in here!

No frame on spam cans.... There should be something near the rear wheels
that can be drilled and bolted for a piece of channel iron, though...
Or, go to a shop that installs trailer hitches and they can solve your
problem...

Source record: 95624

Hi, Norm: I have been using a TS-711A for several years without any of the problems that you describe. Maybe you have a coax/antenna problem that causes high SWR and the rig is shutting down automaticlaly, as it is supposed to do. I suggest that you might get your hands on an SWR analyzer and check your antenna/coax system first, and after proving that the system is good, then take a look at the radio.
By the way, I have been trying for several years to get the DC power cord for the rig, or at least the Molex plug to make my own. Do you have one that you are willing to part with? Also looking for the tone board and the cables to connect it, and also the cables that are supposed to be in the radio to connect the voice board. I have the board, but it came without the cables, and the previous owner did not give me the cables that were supposed to be with the radio. HELP...

1741. Re: MFJ Switching Supplies?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-27 00:00:00 UTC
From: hasan schiers <schiers@netins.net>
Message-ID: <7v75h2$ho5$1@ins22.netins.net>
Source record: 95626

I have gotten about 5 replies so far. I'm not counting this message as a reply, because it was non-responsive. It didn't inform me in any way. I did not ask for bashing MFJ. I didn't ask for opinions about MFJ in general. I asked about two specific products.

Of the five replies, four were very positive. One was quite unfavorable about quality control and he returned the supply in favor of an Astron switching supply. (I do have an RS-70 and RS-35, btw)

Since Mr. Edwards found it necessary to indict MFJ in general, I will take exception to his broad based sarcasm. I'm no shill for MFJ, but everything they produce is not rubbish.

I have the following MFJ equipment:

3 MFJ TNC's...all have worked flawlessly for nearly ten years.
3 MFJ tuners...all have worked flawlessly. (2 high power, one 300w)

1 MFJ tuner....low power, small air inductor, bad soldering...a piece of junk.

1 MFJ 259B Antenna Analyzer...very fine piece of equipment.

1 TNC/MIKE Switch....works OK...poor soldering.

Some of their products are very good. Some are not. It pays to find out before you buy....hmmmm...now wasn't that EXACTLY the point of my post...to find out what others' experience had been with the MFJ supply?

So...if someone has something productive to add, please comment on the supplies I asked about. Tnx, 73

Source record: 95629

I am trying to help a friend that has an IC765, and I dont understand the micrcophone setup. Something about a bias supply required for ICOM radio microphone ckts.

Can anyone point me to some reading material about Icom microphone ckts?

At one time, I had an URL webpage written by a W5, I think, that included a lot of information about the microphone connectors, data connectors, etc., for various radios. Unfortunately, I lost the bookmark for that websight.

Does anyone know of a webpage that gives information about Micrcophone and Data and TNC connection diagrams, etc. ?

Thanks,
73s,
~Vince~

1747. CQ opinions on used XCVR's

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-27 00:00:00 UTC
From: wmmutch@ee.cornell.edu
Message-ID: <7v790i$5al$1@news01.cit.cornell.edu>
Source record: 95632

Next weekend I will be raizing a couple of off-center feed wires for 80-40-20 and the SWL bands. I've been out of ham radio for quite a while and know next to nothing about the current market in used gear. I started in '53 with Heathkits. In the 70's I had a totally homebrew cw XMTR and and SX-28 with a Q-5er. For a while in '80's I was working 75-SSB with a KWM-2, but something started arcing in the final tank and I haven't the test bench to troubleshoot it. When last on the air ('87) I had a National NC-125, recently realined and a partially restored Johnson Ranger and worked mostly 80-CW but some 160, 75-AM, 40 and 15. Both of these rigs still work quite well, but I'm getting interested in something a bit more modern.

I'd really like a reciever section with digital continuous coverage long wave to 30 mhz. Transcieve 80 thru 15 SSB is a must; the WARC bands would be nice. 50 watts brick on the key RF output means about 150 w PEP? I don't troubleshoot solid state stuff well, so I need a rig that's either bullet proof or well supported. I mostly listen and ragchew, rarely contest or chase DX, so don't need exotic features.

I need to keep the budget no bigger than a months mortgage payment.

So what do you guy thinks is a good buy in a somewhat modern transceiver?

happy to hear some opinions.

tnx cul KA1UL, ex WB2JPT, Kn2PSA

I have the original, the HS1000. I brought a pipe out from the
sub-frame and bolted the mount to it. Very rugged and a direct
connection to ground. It looked like an "L" rotated 90 degrees CCWwith
the long side being bolted to the subframe. Very nice when painted to
match the body of the vehicle.

Gads, nearly any rig is a good one these days. Figure to spend a few hundred. I don't happen to care for Yaesu, and like ICOM and Kenwood radios.

If you want a very nice little rig that does everything you ask, look for an ICOM IC-725. It's easy to use and does a great job. 100 Watts all bands, continuous coverage from 30 kHz to 33 MHz. All solid state, but you probably should have an external tuner with it for when your antennas aren't resonant.

Hi,

I am wondering what CW and SSB filters will do for me, should I decide to add them to my IC-706 or TS-430? I am not quite sure what they do. I know that Collins makes a line of mechanical filters. They are reputed to be of excellent quality, although they are old technology. Are these filters interchangable, or do you get Icom filters for an Icom radio. Could someone enlighten me?

Thanks in advance,

You probably have a bad DC power jack. It's on the top of the rig, and mine was removed by the previous owner.

It's a closed circuit jack that, when used, breaks power from the battery. Apparently it's not closing again when the plug is removed. Try spraying contact cleaner into it and exercise it over and over. It might start working. Otherwise you'll have to open the radio and either fix, replace, or bypass it.

The low pass filter belongs on the amplifier output, not between the rig and the amplifier.

That's not your problem, but you probably just have a bad piece of coaxial cable.

>batteries that died when we didn't catch them before full
>discharge.

One thing to beware of: if you've fully discharged an alkaline cell,
you may have eaten holes in the zinc can that forms the anode terminal.
Recharging it will plate more metal on the can, but probably not close
those holes. So the cell is now more likely to leak electrolyte.
Keep a close eye on them for signs of leakage if you do manage to
recharge them.

Quite well - it's MUCH more flexible than the 440,450, and 850 I owned
previously. and considerably faster as well - I have yet to see it
fail ti quickly tune to any antenna I'v connected it to.

Since
> it's not designed as a mobile radio,

"NOT designed as a mobile radio"? Strange, Kenwood must not be aware
of that fact, since they so ignorantly provide a mobile mount for it,
and *I* and a few of my friends must be stupid as well, since we
frequently use ours mobile with great success...

I haven't heard
> much about how it deals with smaller antennas for
> portable operation, etc. I know this is an issue with
> some tuners, so hopefully someone could answer this
> question for me, Kenwood's spec page doesn't mention
> anything about minimum wire lengths or minimum antenna
> heights. Thanks in advance.

A little common sense DOES apply, and tho' the 570 has an EXCELLENT
built in tuner, it obviously is NOT meant to take the place of larger
outboard jobs capable of greater variations in antennas - a good rule
of thumb is to not plan for greater than 3:1 SWR to be matched by the
internal tuner, tho' the one in my 570 does better than that.

Punching holes in underbody structures generates stress concentrations
and invites rust. If you can find any place to drill holes.

You weld a 1/4" strap to the low carbon non-heat-treatable steel
tiedown bracket found under imported cars, not to the unibody
structure. Those brackets are structural strongpoints and not used for
anything beyond securing the car to the deck during sea transport, my
Hondas had four of 'em two each fore & aft. From there you cobble
together an antenna mount made from the same steel stock or whatever
which reaches under the car and bolts to the hidden strap. Takes two
minutes under the car in install/uninstall the antenna mount. When
it's not on the car you can't see the mod to the tiedown bracket
unless you get under the car.

I scrounged the material from a local machine shop and did the metal
work myself, the whole installation cost me a five-dollar tip to the
welder.

>radio store. The ..."
I love when I see things like " why would anyone only make 10% on a "XXX" when you could invest your money & get 15 or 20%?" It show that these people have No business sense or math ability, here's a quick lesson:
Say, (to Keep It Simple) a Ham dealer has $200 of radio stock. (1 HT) , which he makes 10% on ($20 bucks). You have a "surefire" investment that pays 20% annually (a very great return right now). so after 1 year that 200 becomes $240. This is only better than selling that HT if you ASSume the dealer is only going to sell 1 HT per year. That dealer could keep his "$20" & buy another ht & do it again. Say he's a small dealer & only sells 10 ht's a month. (big mail order dealers may sell more than that in one day!) THats $200 profit in ONE month, times 12 months, his original $200 turned into $2400, while your "16 to 20%" investment that "didn't require you to open a ham store only turned into $240 . Apples & Oranges, You can even use "investments" to compare to retail, unless of course you have NO Knowledge of what you are talking about!

I did the 4 diode mod and use the cloning software with no problems. I think the difference is that I never used the software until AFTER I did the mod. Your software remembers what version of the radio you have, but you have changed the version with the mod. Backup your files, delete all the CS2800 stuff, and reinstall CS2800. If that doesn't work, you might have to search for files or registry entries that are storing your radio version. Then copy back your data files - although there is no telling if they will still work since the radio version could be stored inside these files.

This morning I tried to arrange a routine RMA for a repair of a bench multimeter in an electrical engineering lab, and was told that Tektronix no longer supports this seven year old $1.3K instrument in any way...will not provide documentation, parts, repairs, recalibration, or refereal to anyone who will. The companies tech support sites on the web all returned "access denied" messages. I ran a web search on the company and found one article alluding to a corperate split, but got "access denied" when I tried to open the link. Anyone know what's going on?

Hello, and thanks for reading...

I have a Mosley TA-36 5-element triband yagi for sale (curently assembled and on the ground, just took it down off the tower).

I bought it used a while back, it never has worked 100% for me, possibly a bad trap, though they
all look OK (or maybe I just assembled it wrong!) ... It currently works w/low swr on parts of 20 meters but has high swr on the other bands. I have a new balun/feed obtained from Mosley, and the manual....

$75 and pickup in Denver NC, 22 miles north of Charlotte NC on highway 16, on the west side of Lake Norman...

tnx and regards,

brian

I'd like to get on 6M during the upcoming sunspot cycle, and I'm toying with the idea of buying a used rig.

I'd like to spend at most $500, if I'm going to do this at all. I see IC-551's for sale in the high $300-low $400 range. I've also seen comments in my web searches that speak disparagingly of this radio.
Anyone who's owned one want to comment on it?

Are there any other radios I should be considering in this price range?

thanks and best regards,

At the risk of sounding naive, I'd like to ask if anyone recalls seeing the price of Japanese equipment (which was raised by a fair bit in the USA when the dollar fell to 83 Yen a few years back) fall by a corresponding amount when the dollar rose to present levels against it?

If you compare today's rate (104 Yen) to the rate back then (83 Yen) it would seem that we saw the price increase at a poor exchange rate but not the price reduction in later times when exchange rates improved by 20% or more.

I know that the one particular repeater has a strange region of coverage near my home QTH in which there is a lot of high-S-meter noise even though the repeater signal appears strong. It doesn't sound like intermod - it's more like impulse static. People have told me that the valley where this takes place is prone to receiving another repeater on the same frequency pair down-state, but there doesn't appear to be any correlation between (heavy repeater use) times of day and this kind of static. The 5/8-wave antenna made the problem much worse than with the through-glass antenna. Odd...

> I'd like to spend at most $500, if I'm going to do this at all.
> I see IC-551's for sale in the high $300-low $400 range.
> I've also seen comments in my web
> searches that speak disparagingly of this radio.
> Anyone who's owned one want to comment on it?

I've never seen any *cogent* disparaging comments on this rig.
(In fact, I don't think I've ever seen *any* disparaging comments
on this rig.)
I have one -- bought it used about 2 1/2 years ago for $300. It
is the IC-551 -- 10W out, versus the IC-551D - 80W out.
With just this 10W and a 3-el beam at 45' (well, really 7,745')
I have 244 confirmed grid squares (plus another 31 where fellas
are unclear on the concept of SASE's.)
It goes portable Real Easily.

> Are there any other radios I should be considering in this price range?

Oh - yes. And I see an earlier followup listed a few.

gl es welcome to The Magic Band

Keith,
I own an HE-30 and it works fine. If yours works why not use it? It's
not the best RX ever made but they do work. They were sold around 1963-1965.

HERES A SAD STORY:
Imagine for a sec that the "Amateur radio guy" mentality filtered into other retail items like shoes, for example. If , like hams, 90-something percent of shoe wearers wouldn't just go to a local place for $99-150 shoes/sneakers when needed, but rather would find "shoe" magazines" & call every discounters 800# coast to coast to shave that last "nickle" off the price of those shoes. Soon most "local shoe dealers" would disappear & stores that once carried shoes as part of their lines would no longer do so due to lack of profit. (sounds like what happened to ham stores over the 1970'/80's) With a few exceptions, all the US & European shoe makers would disappear, being replaced by stuff made in the orient. Soon there would only be a half- dozen or less major shoe makers, their shoes being sold mostly thru one or two mail order discount dealers per state. Due to the fact that all retail shoe dealers still around would have to have "rock bottom" little profit margin prices, or lose their sale to some other 800 number, a general rule of high "restocking fees" & general lack of return privlidges would become the norm in the shoe industry. Then of course, years later, a middle aged man would tell his teen-aged son(who was now ready to pay for his first pair of sneakers) how "in the old days" I remember that their were many local places you could walk in & buy Shoe-gear"..... "Wow, Dad really?" says the son, as he opens up the sneaker magazine , calling 20 different 800 numbers to see if he can beat another buck or two off those $89 sneakers ....

Since I've been out of the business for over 12 years I can't offer much backing to what I've already stated. However, I can assure you that I saw the checks being written to the manufacturers as well as the payment coming in from equipment sales. The 10% profit (as I mentioned before that margin could be considered a good amount) was gross and not net. The necessarily cut throat nature of the amateur gear retail business ensures that profit margins remain extremely low. The dealer for which I worked generally did well to ensure that his bills were paid after all the expenses were tallied. Luckily that dealer has somehow managed to stay in business while many other dealers have not.

If your amplifier give a lot more output when its input goes up 25% I would say it's not a linear amplifier.

73, Bob K6DDX

By the way, most rigs can be turned up higher. You just lower the reliability of the output circuitry.

1798. Can Anyone Identify This GE HF Portable Transceiver Please?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-28 00:00:00 UTC
From: DavidC <eDoc@netzero.net>
Message-ID: <s1i2n7itr0840@freenews.remarq.com>
Source record: 95530
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have acquired a small portable G.E. rig with the following identifying data on the plate:

Radio Combination: HF 11W
Option: (blank)
Serial: AO 6712
FCC Filing Type: ET-28A

It is 12" long, 4" wide and 9.5" deep.

It has volume and squelch controls, some sort of switch that one pulls in and out, a red and a gold lamp, and a 4-pin mic jack all on the face. There is also a 5-pin male jack on the side and a so-239 jack on the opposite end of the side with the controls.

Help please? Any info. is appreciated, a schematic and/or manual would be awesome!

Thanks! & 73, DavidC K1YP

Source record: 95578

Hello, All!

After I fractured my back,and before I could return to teaching, I worked in a music store chain. Thank God for reeds, strings, and picks, because that's where the profit was...and believe me, it wasn't enough to live on.

The ham dealer's plight is no different! Read on:

Your average upper middle-end guitar has a list price of $1800 US.

Your discount from the manufacturer (there ARE NO MIDDLEMEN!)
is 40/10/2 net 30 or 40/10/5 collect. Freight is additional, and averages about $30 US.

That means that you pay between 975 and 990 dollars for the piece.

Of course, you're expected to match the mail-order place's price, which is $1049. (plus shipping...but the customer says...'but its already here...why should I pay YOU anything extra for shipping?'

So, we have a $60 gross profit on a thousand dollar-plus sale. Now...before I can even think about paying rent and utilities, I have to pay the sales staff salaries and benefits, and the commission on the sale. What you see on your paycheck isn't half of what it actually costs, by the way.

How about service? Yeah...70 bux an hour...less supplies,the tech's salary, shrinkage, the occasional dog that you have to eat, and a hundred-grand plus worth of bench equipment.

plus bad checks, bogus credit transactions, and the lawyers to keep you from having to pay for little Johnnie's self-esteem being hurt because you sold him a string that broke after six months of being tuned to its third harmonic.

The last year that the stores (7 figure gross sales)were open, my checking account paid more than my profit margin. Oh, and by the way...mercantile taxes are paid on the GROSS, not the net!

From experience, I can safely say that the ham dealer's lot is no different.

If you have a local dealer, he's in it because he likes the work and the fellowship, and he's never gonna be rich!

The only reason that we can buy our toys is that the Big Boys sell LOTS of low profit margin items, and a little slice from a big pie tastes good, too!

Bill KS3Y

>
> Thanks!

Either rig is good. Both seem to have good track records. The icom real
reliable. But I agree with one of the other guys, I'd go with something
different for a "home" rig. Even if another icom. Mainly just because
the audio quality of the receivers tend to be better on the bigger rigs.
I've used the 706 at a couple of field days, and athough a real nice
small rig, the audio quality lacks a bit compared to a few other radios.
It's kinda tight, and overly hot on the low bands. Unless you use a good
external speaker, they sound "small". Due to the small speaker of
course. Sounds like a noise magnet on 75m in the summer. Between those
two, I'd go with the 570 myself. I bet it sounds better. Receive and
transmit. But milage varies, my pickyness with audio may not apply to
others with different uses. I'm usually on the low bands. I still prefer
my old ancient TS 830 usually. It's like hi-fi compared to many little
rigs. My icom mobile included. MK

Nothing against a ten-tec, but I'd be real leary about a scout. The problem? They can be unstable on 40m for one.I've worked probably 15-20 scouts on cw over the years. I know one guy here locally that had one. No, make that two. Every single scout I ever worked on 40m cw, was unstable. Except for the last one I worked a couple of months ago, finally found one that seemed ok. They tend to jump and shift around. A design flaw for sure as they all did the same thing. The friend that had one, tested and found his did it on 40/30m I believe, and was stable on the high bands. They may have come out with a fix for that now, but I'd be real leary. Unless you don't mind an unstable rig. Drives me nuts..:< No problems with other ten-tecs. They seem fine. MK

Hello,

I am looking for a Yaesu FT-900. I have had my eyes on this rig for years and have a collection of items for trade. All items that I have for trade are in perfect working order.

ICOM 725 HF Rig 10-160 100 watts w/ manual
ICOM SM-6 Desk Mic w/ Box
ICOM HM-12 Hand Mic
ICOM SP-3 external speaker (matches IC-725)
"Sea" Coupler -- tunes 24 - 160 w/ manual (similar to SGC)
"Bird" 43 UHF Wattmeter with 3 slugs

Please e-mail me at: Jhulet@aol.com

Most of Icom mic's have a FET in the mic element. This FET requires a
bias voltage to operate. On Pin 1 of the mic jack, the TX audio
input, you will find about 6 to 8 volts DC applied to bias the FET.

1824. FS: Icom IC-R100 Scanner/Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-28 00:00:00 UTC
From: atbernstein@osprey.smcm.edu
Message-ID: <7v9oom$uj6$1@nnrp1.deja.com>
Source record: 95587

Icom IC-R100 in very good condition.
Comes with AC adaptor. Sorry, the instruction manual is missing.

The Icom R-100 is a compact multi-function receiver covering from 100 kHz to 1856 MHz (including 800MHZ). Reception modes include AM, FM and FM-wide. The R-100 is easy to operate. You can use either the keyboard or tuning control to access frequency and memory channels. Frequency Step: 1, 5, 8, 9, 10, 12.5, 15, 20, 25 kHz (12.5, 20, 25 kHz above 905 MHz). Of the 121 total memory channels, 100 store operating frequencies, modes, RF attenuator and preamplifier settings. 20 scan edge memory channels are used for specifying ten pairs of frequency ranges required for programmed scan. Auto-memory write automatically memorizes received frequencies (channels 80 ~ 99). One channel is used for priority scan. The built-in 24 hour clock-timer has lithium battery backup. A 15 dB preamp operates in the 50 to 800 MHz range. Three separate antenna jacks are utilized for different frequency ranges. A large backlit LCD ensures readability. Requires 13.8 VDC @1 Amp. 2"H x 5.9"W x 7.1"D 3.1 lb. (1.4 kg)

This radio goes for around $850 (new) at AES.

Asking $525obo + shipping

1825. Kenwood 570 question...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-28 00:00:00 UTC
From: smg3@lehigh.edu
Message-ID: <7v9p0iutj1@nnrp1.deja.com>
Source record: 95588

I'm curious on the Kenwood TS-570 rigs how flexible the automatic antenna tuner is. How does it handle small vertical whips such as hamsticks, etc.? Since it's not designed as a mobile radio, I haven't heard much about how it deals with smaller antennas for portable operation, etc. I know this is an issue with some tuners, so hopefully someone could answer this question for me, Kenwood's spec page doesn't mention anything about minimum wire lengths or minimum antenna heights. Thanks in advance.

You really should BOLT the mount to the car. The mount can be made from pieces that are welded together but welding to the car is probably a bad idea.

These cars are integrated body/frame fo there is no "frame" to weld to. Also they are often high strength/heat treated steel and require special procedures to weld safely.

Last, in the case that you might want to sell the car someday, you want to be able to remove the antenna mount.

BTW Any good trailer shop can make a nice mount and bolt it up for you. This is a lot easier than mounting a trailer hitch.

Hi,

I have always had very good performance from a 5/8 Larson whip. I always drilled the hole to mount it, never used a mag mount. My best friend, WH6LR, uses a Cushcraft Gold 5/8 mag mount whip with his HT and has incredable performance. I would suspect the RS equipment.

FWIW & 73,

Willie

I have a supply of GP300 UHF portables, 430-470 MHz, 2 channels. This is new stock, never used. Included is a new, never charged Nicad, new Mot antenna, belt clip, manual and the original factory box.

Buy one or a million! (Actually I don't have quite a million).

These radios were recently dicontinued, but the GP300 has been one of Motorola's best selling portables.

1840. Re: VX-5R. Good radio!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-29 00:00:00 UTC
From: Bill Phillips <lockserv@bright.net>
Message-ID: <381A3A2B.4880@bright.net>
Source record: 95403

Hi Mike:

I bought one last week for my girlfriend, KC8NFM, and was impressed enough with it that I bought another one for myself and am expecting it to arrive in the mail today. Here's why I like it:

As I don't like long antennas, especially on small radios, I immediately put a very short, about 2", try band antenna on it expecting a great compromise in performance. (I've heard these referred to as 'air cooled dummy loads). To my amazement, we were transmitting uhf simplex while she stood at her door and I in my vehicle at least one mile apart in town - many houses and buildings between us, of course. At the edge our signals were noisy but still readable. She had the VX-5R and I was using my Kenwood TH79A with it's dual band rubber-duck antenna mounted on the radio, not on top of the van.

We monitor the Toledo 2-mtr repeater while sitting in her house in Findlay, apx. 45 miles away with her radio and the short antenna.

There are many built-in features that cause me to like this radio as well and if you've read up on the radio I assume you are familiar with these. I will add, however, that the features are both easy to learn and easy to use as they make good logical use of a 'function' key as well as short cut keys to access. Volume is good enough, although it distorts as you might expect at the higher level due to such a small speaker, but, it's definitely adequate.

I'll assume that the radio that I'm waiting on will perform at least as well, but, as it's not yet arrived, I can only account for one radio at this time. Others may provide you with a more technical report such as sensitivity ratings and such, but, mine is offered as a real-life in-the-field account, and a limited one at that.

Over all, I'm looking at this radio as a replacement for my current mobile and hand held outfits. I'm in a mode of life where I'm wanting to simplify things and am presently not interested in lots of gear sitting around, including towers and feed lines and such. This radio, due to its size, battery life (1200 mAh), sensitivity, features, and apparent ruggedness will easily allow me to un-clutter the house and the car without much sacrifice. As I do far more listening than talking anyway, it's extended receive coverage and 200 memories will keep the entertainment factor alive as well.

I hope this prooves helpful to you. Take care.

Bill Phillips, N8GZU

1849. WANTED: Yaesu FT-900, will trade the following...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-29 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19991029012153.09183.00001778@ng-cq1.aol.com>
Source record: 95450

Hello,

I am looking for a Yaesu FT-900. I have had my eyes on this rig for years and have a collection of items for trade. All items that I have for trade are in perfect working order.

**ICOM 725 HF Rig 10-160 100 watts w/ manual (Ebay end of auction = $400.00)
**ICOM SM-6 Desk Mic w/ Box (Ebay end of auction = $60.00)
**ICOM HM-12 Hand Mic (Ebay end of auction = $20.00)
**ICOM SP-3 external speaker (matches IC-725) (Ebay end of auction = $100.00)
**"Sea" Coupler -- tunes 24 - 160 w/ manual (similar to SGC)(Ebay = ???)
**"Bird" 43 UHF Wattmeter with 3 slugs (Ebay end of auction = $150.00 for wattmeter, 100w=$60, 250w=$60 & 1000w=$70, if all sold separately)

This adds up to about $920.00 total if these items were sold via Ebay. This does not include the "Sea" Coupler as I could find one in the "completed auction" search data base for reference
.

TUBES AVAILABLE

I currently have over 300,000 tubes in stock. Have a good selection of both
new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a Web Site nor a price list. Suggest that you Email or
Fax me with the tubes that you are looking for along with the quantify of each
needed. I will check my inventory and advise you of current availability and
cost.
In addition, I also have a very good selection of tube testers, tube caddies
and good used CB/HAM equipment. Please contact me regarding you needs.
Thank you for your consideration.

Creative advertising at work, eh? But, do remember, in other parts of the world, outside of the United States, it is perfectly legal to operate even that green stuff on 27 MHZ frequencies! And, of course, that xtal can be ordered by the thousands from a multitude of crystal manufacturers around the globe -- so much for the "rare" aspect. Selling/having it is certainly not illegal per se, but ......

In general, buit-in auto tuners have limited range. If the SWR at the
desired frequency
is 3:1 or higher, the auto-tuner probably cannot obtain a match.

Rob,
I went to the site that you recommended for the FCC License preparation class. I was a bench tech, working in cellular. My employer required an FCC General Radiotelephone Operator License to get a promotion to management. I saw your post and went to

http://www.ddcommunications.homepage.com

You were right! I was able to get the study manual at a killer price. Then I used their online practice exams. I did good on the online exams so I called the company. They came to my workplace, gave a 1 hour class, then administered the Element 1 test. I PASSED!!!! Then another 1 hour class (Element 3), I PASSED AGAIN. Everyone of us (5) passed the test (some of the guys hadn't even studied before, the class was that good!!!!!!! 3 of us were offered the Radar Endorcement, so what the heck, we did the class and passed it too! BEST OF ALL, THEY WERE THE LOWEST PRICES OF ALL OF THE PREPARATION COURSES, AND ONLY TOOK 1 DAY, NOT 2-6 DAYS!!!!
Im going to take the GMDSS maintainer class next Saturday just to get the license!!!! (It'll look good on my resume).
Anyway, thanks Rob for mentioning your success with them. Now I have my license, and the respect it brings...
Take Care,
Jeanette Robison

I have for sale a Ten Tec Centurion amplifier in Ecellent Condition.......It comes with the original manual and original shipping carton.....I have a brand new matched pair of 3-500ZGMP tubes by RF-parts which was bought 10/25/99 still sealed in the box with the bill of sale......So this amplifier is ready to go 100%....
The specifications for this amp is as follows:

1.8-2.0, 3.2-4.7, 6.5-9.0, 9.0-15.6, 16.4-24.0, 24.0-29.7 mhz and 10 meters has been modified

Power output: 1300 watts ssb, 1000 watts cw, 50% duty cycle. RTTY and SSTV 650 watts, 50% duty cycle, ten minute transmission limit.

Driving power required: 100 watts for full rated output

Primary power: 220-250 VAC @ 15A. 110-125 VAC@30A, 50/60hz For full power operation. It is wired at present for 220 VAC.

I will take $1200 plus shipping and can be reached at (508) 821-2993 or e-mail....

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,mn.forsale

This is a Wilson tilt/crankup/rotating type tower. Max heigth is 45 ft. It is a freestand type&looks like a us tower. This is located in New Ulm Mn. $350.00 plus freight. It is best if someone in Mn or surrounding look into it as freight would be high. Also it needs to be hauled with a car or boat trailor. Min. heigth is 25ft. The tower is in good condition.
What was on the tower was a 20ft beam and stood about 60 ft. from the house.

Source record: 95485

Yep:

Still on the hunt for a few NFN6010's on 94.8Hz Code ZA.

These are the ones used in the Older Series HT90's/HT440's, MT500's
and MX series of radios.

I have lots of stuff for trade if perhaps you will look into that
Old Box of Tone / Code Filters for a few of these. These are
tthe ones used in the Older Series HT90's/HT440's, MT500's
and MX series of radios.

I also have hundereds of other tones for trade. Just Limited
on my 94.8hz ones..

Looking to spend up to $100.00 for some that are of the Late Vintage
piror to being discontinued...Later the code date, higher the price offer.

```
I have for sale:

Model 546 Omni D series B ser# 546-0106 with warc kits (not installed)
Model 243 Matching external VFO
Model 252M Matching power supply
Model 645 Matching keyer / paddle
Model 705 Desk Microphone

All equipment is top notch with manuals. The warc kits have the
installation instructions, but are not installed. VFO indicator is a
little crooked, but doesn't effect operation in the least. The Omni
has both crystal filters as well as the audio filters. All equipment
works just as it should.

Price is $550 shipped stateside.

All can be viewed at:
http://www.megsinet.com/~steam/hamradio.html

Thanks... Mike

SOMETIMES *other* factors are involved - in my case, one of my amps
works best with 125+ watts of drive - and the difference in output
with 100 to 125 or more drive is pretty substantial... Now, as you and
I both know, it usually takes a 4-times level increase in power for an
S-unit or so, but SOMETIMES, under difficult conditions, every little
bit CAN help - and some of us power hungry "left-coasters" want every
watt we can muster!

I am looking for a GOOD 386dx-40 motherboard.
I would like it to be NIB with full docs for setup.
Isa bus only, 36 or 72 pin ram, and no s/p io onboard.
Ide/floppy onboard is ok.
y2k is a plus!!!!

That's interesting...I own VX-1R and FT-50 Amateur HTs which I can NOT
program with my VX-10 cable.

But you say that the Amateur VX-5R and commercial VX-10 do, indeed, use
the same cable???

Cross-posted to:
alt.ham-radio.marketplace,rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.antiques.radio+phono

For sale:

HEATH DX-60 with accessories - includes matching Heath HG-10 VFO,
Heath HM-15 SWR meter
and a nice straight key plus the DX-60 manual. Fine two tone vintage
green radio! All in excellent shape. Will sell for $185.00

= = = = =

Kenwood TS-520s in good condition. Comes with a Shure desk microphone
The top cover has some surface rust and needs painting. Front panel
looks good.
All original knobs. Operates on 120V AC or 13.9V DC.
Will sell for $240.00

= = = = =

Kenwood AT-130 Antenna tuner. Excellent condition, in original box
with special cable included. Will sell for $125.00

= = = = =

MFJ 941-D All-band HF 300 Watt antenna tuner with SWR built-in.
Excellent condition.
Will sell for $70.00

= = = = =

MFJ 484-B Grand Master Memory Keyer. Has 4 memories for excellent CW.
This keyer includes the AC power supply for 120V AC operation, and is
in very good working condition.
Will sell for $70.00

= = = = =

Globe Scout 680 AM-CW transmitter. Complete transmitter with all tubes
etc. Needs a little work, mostly with the paint. No dents, but needs
painting. Front panel is good, but top cover has some surface rust.
Will sell for $95.00

= = = = =

Galaxy 12V DC Power supply. This will work with the Galaxy III and
Galaxy V series
of HF transceivers etc. No cables, Will sell for $39.00

= = = = =

National VFO-62. This is the companion VFO to their line of VHF transmitters and transceivers. 120V AC supply is built-in. This one is complete and in great shape. It needs paint on the outer case, but the front panel is decent. Main tuning knob has some surface rust.

I would like to trade this for an HF vfo (any brand) or sell for $45.00

= = = = =

1911. Fraud Alert Ron Simpson N6GKJ

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-30 00:00:00 UTC
From: jdp@epix.net
Message-ID: <381b3c38.8712924@news.epix.net>
Source record: 95357

Please add Ron Simpson N6GKJ to the list of people to avoid doing
business with. His eBay user name is "Rondocalrizian" In August I
mailed him a Money Order for one of five Regency UHF Repeaters he had
listed on ebay. He pulled them off ebay, but emailed me he would sell
me one for his listed price of $150 plus shipping of $25. Total $175.
He received the MO and cashed it on 9/1/99. I still did not receive
the Repeater. I contacted him numerous times and he stated the
Repeater was sent. He later found it wasn't sent and assured me it
would be sent asap. I didn't get it within 2 weeks and called him
again. He stated it was sent and refused by me. I asked for the UPS
tracking numbers, but got no response. He then stated it was being
sent FedEX on 10/7/99 but again wouldnt give me the tracking numbers
only a threat that someone better be there to receive it. It's now the
end of October and still no Repeater and no answers to my email asking
for a refund.
I think i've waited long enough. John WC3Z

I have for sale a Ten Tec Centurion amplifier in Ecellent Condition.......It comes with the original manual and original shipping carton.........I have a brand new matched pair of 3-500ZGMP tubes by RF-parts which was bought 10/25/99 still sealed in the box with the bill of sale......So this amplifier is ready to go 100%....
The specifications for this amp is as follows:

1.8-2.0, 3.2-4.7, 6.5-9.0, 9.0-15.6, 16.4-24.0, 24.0-29.7 mhz and 10 meters has been modified

Power output: 1300 watts ssb, 1000 watts cw, 50% duty cycle. RTTY and SSTV 650 watts, 50% duty cycle, ten minute transmission limit.

Driving power required: 100 watts for full rated output

Primary power: 220-250 VAC @ 15A. 110-125 VAC@30A, 50/60hz For full power operation. It is wired at present for 220 VAC.

I will take $1200 plus shipping and can be reached at (508) 821-2993 or e-mail....

Hi,

I will be selling a Cushman CE-6A communications monitor (with scope and preselector plug in options).

Does anyone have a suggestion as to it's value and where I should sell it? eBay? Here? Other news group?

email replies are OK as well as posting here.

Thanks Colleen.

Source record: 95378

I have an Icom 746, about 18 months old, that I am interested in selling. I prefer not to ship this, so would like a sale to someone in New England. I will deliver or you can come get it. The rig includes the radio, standard mike, Bencher paddle and the external speaker along with an Astron RS-35M power supply. I'd like to get around $1500 for the works. If you come to Vermont to pick it up, you may take the Cushcraft R-7000 in the back yard if you wish but be forewarned it has a bad trap and has been nothing but trouble.

Reply via email to railmeat@worldnet.attdotnet (replace dot with a .) if interested.

Radio works and looks great. I am merely leaving the hobby.

I second the motion. The FT-50 is a really nice radio, but when
I got mine it kept getting turned on in my briefcase or when I
would wear it on my belt under a coat or when sitting in a chair
or car seat.

I did get Yaesu to replace the switch. I sent the radio in for a
warranty repair and they claimed to have changed the switch, but
didn't. They did send me a switch with instruction on how to take
the radio apart and replace it. It was rather simple.

Even though the new switch is better, putting power switches on
the fronts of radios, which seems common today, is IMHO a very
stupid design. I would much rather have a knob that acts as both
a power switch and a volume control. I cannot understand the new
design due to the fact that it is far too easy to turn on the
radio by accident.

I believe Yaesu will provide the lower profile switch free even if
the radio is out of warranty, even though I doubt it costs much.

I also have a Yaesu FT-90R and so far have found it to be an
excellently designed radio with very sensible controls and very
easy to use. One can actually use most of the functions without
getting out the manual, a rarity with amateur radios today.

Good luck with the battery problem! You might be able to get help
via e-mail. At least you can ask for a new power switch that way:

GlobalMap 100 Product Information
More info at
http://www.gps4fun.com/low_gm100.html

Lowrance's Rockwell-powered 12 parallel channel receiver gives the GlobalMap 100 lightning-fast position fixes and extreme reliability under all conditions.
While only three satellites are required for a position fix, Lowrance's GlobalMap 100 utilizes nine additional channels to lock-on to any visible satellites and then compares this data with data from the original three satellites. The unit then over-resolves a solution, creating an accuracy-enhanced reading. No receiver is capable of maintaining satellite fix more reliably than this revolutionary new Rockwell-powered receiver.

The IMS MapCreate CD-ROM includes all of Lowrance's IMS SmartMap&#65533;, IMS WorldMapT , U.S. Rural Roads, U.S. Navigation Aids and U.S. Wrecks and Obstructions databases.With the innovative MapSelect and MapCreate features and a PC, customized map data can be uploaded into the unit from the CD-ROM. The new GPS Data Manager waypoint upload-download software is also included on the CD-ROM. Nothing could be more versatile, nothing could be simpler.

1937. RX-320: Pedal-to-the-metal DXing?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-30 00:00:00 UTC
From: Guy Atkins <dxing@hotmail.com>
Message-ID: <7vgffvhcr1@nntp2.atl.mindspring.net>
Source record: 95383
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave

Hello All:

I've read many postings and the online reviews about the Ten-Tec RX-320.

However, I've not seen comments (positive or negative) about the receiver when used for very demanding DXing (i.e. foreign mediumwave or tough tropical band targets).

Has anyone tried this receiver on a DXpedition? I've experienced what a Dymek DR-333 receiver ("black box" PC-controlled non-DSP rig) can do on the good end of a Beverage, but how about the RX-320? Images all over the place, or...?

The DR-333 does a creditable job, especially in the hands of mediumwave DXer Nick Hall-Patch of Victoria, BC Canada. He's written some impressive software that causes the DR-333 to mathematically reduce the effects of 10-kHz domestics when scanning for trans-Pacific mediumwave splits. It was a great signal-finding tool during this summer's "1999 Grayland Beach DXpedition" in Washington State. His software ran unattended on a DR-333 and the results of "hits" were displayed on a notebook PC.

I mention the DR-333 because it is perhaps (??) similar in construction and performance to the RX-320, except for the latter's DSP I.F. filtering.

I've owned Drake, JRC, Lowe, ICOM, and AOR communications receivers before, and I'm familiar with what they can accomplish on foreign MW and tropical band DX. The current rig here is a Yaesu FT-920, with upgraded, cascaded crystal filters from International Radio Co. in Oregon USA. It performs admirably and has some unique features for DXing. However, I'm curious if anyone has really *pushed* the RX-320 for DXing, especially with Beverage antennas? I'm getting the itch for the proverbial "backup" receiver, and the little Ten-Tec appears to have a high value-to-price ratio.

I don't expect the RX-320 to dig out every signal that my FT-920 can, but if it hears as well 75% of the time, I'm tempted...

So... please respond if you have tried any down-and-dirty DXing with the RX-320, particularly in a DXpedition situation. Also, if you have experience with Ten-Tec's new Pegasus transceiver, please share your comments; I suspect its receiver is the same as the RX-320.

Thanks!

There is more to the cable assembly packed with the software.
The DB-9 shell contains some active components which act as a
level-translator, as I recall.

The software sold by Icom (produced by RT Systems, I think) is
actually quite good and works very well with the radio.
Well worth it, imo.

I have looked at, and tried, other "compatible" software with the
result that it has done nothing but scramble the memories in the
radio.

Arlin, I have a GE Master II repeater that has been modded already for Ham Repeater use. It is on 444.700/449.700 at this time. It is in an E case with an NHRC-3/M2 Repeater Controller that has CW ID, 4 Voice Messages, Tone encode and decode board, and Cellwave Duplexers built in.
It is completely portable, you can control the repeater with touch tone pads on your ht. It has the 40 watt output board in it now but you can replace it with a 100 watt board if you have one.
I have the Book on the M2 Controller also.
I need $ 695.00 plus shipping on this one, It will also do Simplex Repeater operation.

Greetings all,

I recently purchased a 3K Classic X MK II which I'm absolutely thrilled with. My question is regarding the Tune control (roller inductor)on this amp. Mine is pretty stiff to turn (definately not as smooth as the variable capacitor load control). Is this normal for this amp? Any feedback is greatly appreciated.

73.
Rich

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel

Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications
Corp. sells used Plectron receivers, in working condition,
for $75-100. If you require crystals or reeds, TCS may be
able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like"
signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and
ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Hello,

I happened to be at the right place at the right time and was given this Heathkit SB-200 1000 watt amp. I have only had it for a couple of months and have never used it, but the owner, a friend of the family advised that it has two new tubes that only have a couple of handful of hours on them. The amp. is wired for 220 not 110. It operates 10m thru 80m. I was suprised how well the case looks, it is very clean... It comes with manual in nice condition also.

I am not a "big rig" kind of ham, so I am letting it go to afford other items that I will use...

$300.00 + shipping seem a fare price for 1000 watts of RF...

Hi Norman ,
I ve resolving this problem 2 years last
replace an NTC resistor nice the final RF and driver for fan . This NTC was
half-crack and when the temperatura was over normal the RTX go down.
No TX and the s-meter was end scale but no tx.
replace or modific this ntc for continuative fan work and try your RTX .

The announced split let them sell their printer division to XEROX
and get $950M to advance their core business in new directions.

You might try some of the instrument distributors like EIL for
parts, docs, etc.

There is a difference between the Yaesu amateur cable and the Vertex cable. I do not know what the differences are...but I own both and they are not interchangable.

1967. FOR TRADE: CCTV Cameras for Ham Gear

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-30 00:00:00 UTC
From: K8TJ <tje@usol.com>
Message-ID: <hPgaOHbgHnj0fnYKiaAI=E=MlHqQ@4ax.com>
Source record: 95433
Cross-posted to: rec.radio.swap,rec.radio.cb,rec.radio.amateur.equipment

I have seven (7) Panasonic WV-1414 CCTV cameras with lenses all in fine working condition that I would like to trade for some type of ham gear. A picture of one of the cameras can be seen at:

http://www.usol.com/~tje/pancam1.jpg

They require 24 VAC power. I can also provide power transformers for them if needed and the right deal comes along. These cameras are used but in great operating condition. Please email me with what you have to trade. PLEASE NO converted commercial vhf/uhf stuff.

1970. FS: NEW CUSHCRAFT BEAMS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-30 00:00:00 UTC
From: Dean Kastoris <n8ihs@home.com>
Message-ID: <381B0FA4.4DA7F71A@home.com>
Source record: 95436
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have two new, never assembled Cushcraft beams for sale as follows:
1) Cushcraft 124WB 4 element 2 meter beam. $50.00 plus shipping CONUS.
2) Cushcraft A503S 3 element 6 meter beam. $75.00 plus shipping CONUS.

I purchased these beams with the with the full intention of installing them. I have decided that I do not want to do this anymore. These have never been assembled and the boxes were only opened to make sure everything was intact for warranty purposes.

Thanks DEAN N8IHS

1974. FS: DX-440 RECEIVER

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-30 00:00:00 UTC
From: Charlie Vaughn <cvaughn3@bellsouth.net>
Message-ID: <jOES3.10258$Pk.50662@news1.atl>
Source record: 95440

For sale, the DX-440 AM/FM Direct Entry Communication Receiver with SSB and digital read-out. While this portable receiver operates on 6 "D" batteries, I also have the optional AC power supply. It tunes from 150 to 29999 kHz and has the 87.5 to 108 MHz FM broadcast band as well. And you can tune in your favorite ham operator by using the SSB mode.

Features include scanning and storage of 9 different frequencies in memory.

Excellent condition. You can see this unit on my Web Site @ http://sites.netscape.net/cvaughn2

Offers.

CTCSS is not an issue here. If it were, I would still see the S-Meter, even
though the audio would not be present. When I close the squelch past the
breaking point, then entire S-Meter flickers, and disappears, like its not
even receiving..... Somewhere the receive is cutting out....

1983. Wanted - NiCad batteries

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: Anthony Easom <anthony.easom@virgin.net>
Message-ID: <381CBD5F.347A5139@virgin.net>
Source record: 95199

I have a pair of Motorola MT500 handheld transceivers and am
looking for nicad batteries for same.

The ones I have (which are shot) are H4462 15Volts - 225 MAH made
by Alexander Mfg (UK) Ltd. Any battery capable of delivering 10 -
15volts
would suffice. Dimensions must be 7cm x 5.5cm x 2cm (or smaller).

Motorola cells are available at approx ï¿½60 and Alexander's at ï¿½55 - I
want
something cheaper.

Regards,

anthony.easom@virgin.net

1988. FS - Mosley TA-36 6-el triband yagi in NC (repost)

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: Brian Harrison <bharrison@apple.com>
Message-ID: <7vihhv$k1e$1@fir.prod.itd.earthlink.net>
Source record: 95204

Hello, and thanks for reading...

I have a Mosley TA-36 6-element triband yagi for sale (curently assembled
and on the ground, just took it down off the tower).

Very good condx physically, but it never has worked 100% for me, possibly a
bad trap, though they all look OK (or maybe I just assembled it wrong!) ...
It currently works
w/low swr on parts of 20 meters but has high swr on the other bands. I have
a new balun/feed obtained from Mosley, and the manual....

$60 and pickup in Denver NC, 22 miles north of Charlotte NC on highway 16,
on the west side of Lake Norman...

tnx and regards,

brian

Robert,

What type of cabinet is this in? A 6' indor or outdoor?

How old are the tubes in the PA?

Thanks,

Mark

2000. FS: SEA Model 1612B HF Coupler, like SGC...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19991031005147.09764.00000618@ng-cq1.aol.com>
Source record: 95292

Hello,

I have aquired a "SEA Model 1612B HF Coupler.

$175.00 + Shipping...

Frequency Range: 1.6 to 25.0 MHz
RF Power Capability: 150 watts PEP
Input Impedance: 50 ohms
Power Requirement: 13.6 VDC negative ground
Operating Currents: 2 Amps
Tuning time: "Learn Mode", Typically less then 5 seconds
"Educated Mode". Approximately 20
milliseconds
Mounting: Any position
Enviromental Temps: -30C to +60C
Size: 15"x12"x5.5"
Case Construction: Waterproof, Fiberglass
Control Cable: No. 20 Guage, 3 or 4 wires

Discription as read from its Manual;

OVERALL DESCRIPTION

The SEA 1612B is a fully automatic antenna coupler,designed for a wide range of applications. This product features an advanced microprocessor based tuning algorithm which allows this antenna coupler to tune up on normal voice signals from the transmitter, and also remember which network constants are required for a given operating frequency. This feature permits the antenna coupler, once the "learning" operation is completed, to retune a given frequency in approximately 20 milliseconds. This is less then the time required to say "hello". The coupler operation is completely automatic and requires no operator intervention. If the antenna system is altered or replaced, the coupler will automatically "relearn" the required constants. During the learning period, operating is somewhat slower and, depending on the particular frequency/antenna combination, up to 5 seconds may be required to achieve a matched condition. Once the antena is properly matched, the coupler signals this condition by pulling a control line low. This control signal may be used to operate an "all tuned" indicator of some kind at the operators' Transceivers. Such an indicator is provided on the SEA 222 and SEA 223 radio-telephones.

Hello,

I have an extra manual for a Yaesu FT-50R this hasn't a crease in it, not a dent or bent page, looks like someone just ironed it! Anyway, I am sure someone could use it as the FT-50s do take some time to program...

$10.00 shipped in the Cont. US

Hi Clint,
I told you before what the difference is very simple. Open the chassis of programmer and look for DTR/DSR jumper (pin 4&6 DB-9 connector). If it present - VX radios, if no - FT radios (may be vice versa), add a switch and use for both VX/FT radios.

2005. swr meter and how to use??

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: William Mastop <wmastop@home.com>
Message-ID: <jVRS3.19455$Rx2.155083@news1.rdc1.bc.home.com>
Source record: 95297

Okay, it's a darn stupid question, but the manuals that I have from getting my licence are not that clear on how to do it.
I have a Swan Electronics SWR-1A swr meter. It has two meters, each with one needle. The meter to the left is labelled power, and the meter to the right is labelled S.W.R. There is a knob between the two, with a label indicating a range of 0 to 10. On the back are two standard antenna connectors, one labelled antenna and the other labelled transmitter.
This, as I note above, is a stupid question, but how the heck am I supposed to use this thing? I gather that the knob in the middle is a sort of calibration system, and I am guessing that I should use that to adjust, when the rig is putting out 100 watts, so that the needle labelled power reads 100, and then look to the meter labelled SWR to determine the swr. However, for obvious reasons, I want to be quite certain before I connect that to my rig. I would appreciate any assistance that I can get on this rather embarrassing matter.

2006. Any Modern Phone Patches?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: Greg Knapp <n6gk@garlic.com>
Message-ID: <s1nqs9a2iqi37@corp.supernews.com>
Source record: 95298

It's been years since I've seen any advertisements for phone patches. Does anyone know if there are any phone patch manufacturers left? Do they make patches with the new modular (snap in) phone jacks on them so you can just snap them into the line?

73,

Greg, N6GK

2007. Re: Antenna Adventures

Message-ID: <gTCoJCA3IAH4EwFm@g3ohx.demon.co.uk>
Source record: 95299

No. Not true. The radiation patterns are very similar. However, the 5/8 will give you about 3.2dB more than the 1/4wl.

As I understand it, for a vertical antenna, if you start with a very short one and increase its length, the radiation in the horizontal direction increases (ie you get more 'gain'). At a length of 1/2wl, you start to get a second, high-angle lobe at something like 40 degrees. At 5/8wl, the radiation in the horizontal direction has reached its maximum, and the high-angle lobe has become well established. Increasing the length >5/8, the horizontal radiation falls very rapidly, and the high-angle lobe perdominates.

I've used a 2m 5/8 magmount for many years, with no problems. The whip is the type with the 1" dia, three-and-a-half turn 'spring' coil at the base. Some time ago, I did a few quick comparisons with a 1/4wl, and found that the 5/8 was not OUTSTANDINGLY better! Never-the-less, I always use the 5/8 (it looks better!!).

The magnet is about 7" dia, and it sticks VERY well to the centre of the car roof. The only trouble which I have is that I have to guard against corrosion. After a couple of months with a new magmount, signals went right down. I found that the connection of the copper coax braid to the steel shell of the magmount was a bit of a joke. I cleaned things up etc, and dowsed it all with WD40. This needs to be done from time to time to keep corrosion at bay.

I suspect that you too have a bad connection!

However, I now remember that I once bought a 5/8 which was absolutely HOPELESS. The base coil was not the 'spring', but was 3" long, 1/2" dia encapsulated in resin. In lab tests, I found that the antenna resonated on 2m OK, but the SWR was 4:1. The resonance was also VERY, VERY broad. It was as lossy as hell! Don't know why. The coil measured 0 ohms resistance, and if there has been any shorted turns, it would not have resonated on 2m! Great mystery. If I come across the coil one day, I'll hack it to bits to find out what is in it!

73,

Ian.

For Trade
A very good condition antique Zenith TransOceanic G-500, working. Made about 1950. This one will display nicely as is. Will trade for a working well laptop 486 50 mhz or faster with decent memory and HDD. Modem and CD a plus. What ya got to swap.

Thanks

Butch

2015. FT-90 Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: Bill Atkinson <bill@kb9uzd.net>
Message-ID: <381C3FE1.44E32CFA@kb9uzd.net>
Source record: 95307

I seem to be experiencing a problem with my FT-90 and was wondering if anyone else knows anything. The radio works great on both 2m, and 70cm. On the 2m side, any frequency in the 147.x range causes intermitant receive. I have a particular repeater I monitor here in Indianapolis, 147.015, and when the repeater is active, my radio does nothing, no s-meter, nothing. If I open the squelch past the breaking point, all of a sudden the meter goes full-scale, and I hear everything, but when the repeater traffic is over, my squelch is open, and closing it will again make the repeater impossible to hear. I see this occuring on a simplex frequency in the 147.x range also. I use the radio on several 146.x repeaters, and it works wonderfully. I've only had this radio about 8 months. Any ideas?

The 551 is a great rig. I had a 551D for many years and it gave great service. I sold it because I had a 575H as well as a IC-736. The only thing detrimental regarding the 551 is that Icom no longer services it and some of the parts are now difficult to locate new or used.

2017. TH-28 gurus, I have a question.

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: mrmath@mindspring.com
Message-ID: <MPG.1286103413c8cdb5989690@news.mindspring.com>
Source record: 95309

I recently dug my th-28a out of the box it has been stored in during my brief hiatus from ham radio. Unfortunately, the battery is shot.

When I took it out to my truck to plug it in using the cigarette lighter, it seemed to be functioning normally. Except, when I go from MR mode to VFO mode, I get these strange letters in front of the frequency readout.

It doesn't show 144.610, it shows B44.610. Then sometimes, it shows FF4.610. Weird, huh?

If anyone knows a fix for this, fire away. If not, can anyone at least tell me how to do a complete reset on the radio? Or where I can obtain a copy of the owner's manual online?

Thanks in advance,
Scott, ku4ig

Source record: 95320

You have basically got it correct. The knob should be used to set the "Power" meter to full scale regardless of how much power the rig is putting out. The "SWR" meter will then indicate the SWR. "Power" should be understood to mean "Relative Power" on these simple meters. When making initial checks on the antenna system, use of as little power as possible until you get things into the ballpark is good practice.

Good luck and 73, CJ K0CJ

2029. noise problem on break-in keying

Newsgroup: rec.radio.amateur.equipment
Date: 1999-10-31 00:00:00 UTC
From: gagnon@gagnon.fakeu-net.com
Message-ID: <381c5601.5170957@news.u-net.com>
Source record: 95321

I have an ICOM 735 which until recently has been a fantastic rig. Lately, on full break-in keying only, the receiver noise bursts in-between characters have become distorted. It seems to be pulling in signals from around the band, when on normal receive the band is quite quiet. Some sort of intermod perhaps?? seems to be getting into the receive circuit only when I use full break-in keying at higher CW speeds. Could it be something as simple as dirty relay contacts now that the rig is about 12 years old??

Any suggestions would be appreciated.

I have a Micor Base converted a repeater. It has new helical filters on
front end and completely gone over by local Motorola tech for the 2m
band. It comes with a 7k
controller, with all options, including pl. Also it comes with duplexer.

All come with service,and or user manuals.
The scom 7k comes with the windows programming software.

Model numbers are as follows;

Motorola Micor
893RCB-3145B-RH52

Telewave duplexer
TPRD1556

Scom 7k controller

Asking a fair price.

All ready to go on 2m.

Please, serious inquiries only, buyer pays shipping,
and insurance.

Hello Netfriends,

I'm trying to identify the chip used in my Uniden BC-3000XLT as the RF receive frequency synthesizer. According to my schematic, it's labeled "M640866P", but I can't seem to find any info about it.
Does anyone have complete info about this chip or at least a manufacturer name? A data sheet would be probably too much to ask for...:-)
In addition, I'd like to get a full partlist of this scanner. If you have a BC3000XLT service manual I'd sure appreceate your help.

Thanks in advance,

T-man

Thanks and best regards,
T-man

Note: when Replying, please email me directly in addition to posting here, so I don't miss any responses. Don't forget to remove the "97" from my email address inserted as an anti-spam counter measure...:-)

Source record: 95389

Hello,

I happened to be at the right place at the right time and was given this Heathkit SB-200 Amp. I have only had it for a couple of months and have never used it, but the owner, a friend of the family advised that it has two new tubes that only have a couple of handful of hours on them. The amp. is wired for 220 not 110. It operates 10m thru 80m. I was suprised how well the case looks, it is very clean... It comes with manual in nice condition also. I am not sure the power output, I have heard 600watts and 1000watts?

I am not a "big rig" kind of ham, so I am letting it go to afford other items that I will use...

$300.00 + shipping

Source record: 95391

Hello,

I have aquired a Bird Model 43 RF Thruline Wattmeter w/ 3 slugs...

SLUGS:

50 watt (100-250MHz)
100 watts (2-30MHz)
1000 watts (2-30MHz)

This meter is almost new in appearance and looks to have been used very little or stuck on a closet for most of its life. I have the manual and its also in great condition.

I will let the meter go and all three slugs for $315.00 + Shipping

After looking at AES and HRO this seems to be a fair price and the norm on Ebay...

Thanks & 73

Great. Happen to have a digital camera? We should get this info out on a Web page somewhere...maybe submit it to the "Unofficial" VX-1R/VX-5R site.

There are two current Vertex cables, the white one with all the adapters and the black one with the two 1/8" plugs. You need the later to do the VX1R.

Where can you get a replacement microphone for those things? My
stepdad is a ham (W0PDI) and I'd like to get one for him, along with a
mobile antenna. He has been kind of quiet on the bands since he and
my mom sold the house in Florida with the 85-foot crank-up and
5-element beam. Man, what a signal that thing would put out, even
"barefoot"!

Source record: 95223

Hello, all!

I'm looking for a VERY CHEAP two meter rig...synthesized if possible.

Thumbwheels or knobset fine! (a la Wilson, tempo, IC-230)

Does not need to have 144-146 subband. Would prefer working rig, but if the price is right...

I've given up on the auctions. I've had eight candidates snatched out from under me in the last 5 seconds of the auction in the last five days!

E-mail me direct: KS3Y@prodigy.net

tnx es 73!

Bill G.

100's of winter projects at Harry's Homebrew Homepage http://sm0vpo.8m.com.

I have done a lot of updating recently and included a 4-watt AF amplifier as well as coil-winding using PCBs so that anyone can wind the same coil! Not an easy task, remember Harry's laws?:

1 - No two people can wind the same inductor with the same instructions and materials.
2 - Coil winding data is a constant that varies from person to person.

Of course, the article is illustrated with photographs of a 20uH inductor (+150pf = 4MHz).

There are loads of antenna projects, transmitters, receivers and even a little booze, if you think "homebrew" has another meaning.

I have my own message board which is in daily use by home constructors with problems or suggestions. If you could help to answer some of the questions there I would be eternally gratefull.

best regards from Harry - SM0VPO

Don't mean to confuse the issue...but I have no idea what you mean by a "white" cable and "all the adapters": both my Vertex and Yaesu cables are black. And the only "adapter" I use is the short 1/8" mini-plug 3-connector female -to- 4-conductor male that plugs into the HT.

Rob,
I went to the site that you recommended for the FCC License preparation class. I was a bench tech, working in cellular. My employer required an FCC General Radiotelephone Operator License to get a promotion to management. I saw your post and went to

http://www.ddcommunications.homepage.com

You were right! I was able to get the study manual at a killer price. Then I used their online practice exams. I did good on the online exams so I called the company. They came to my workplace, gave a 1 hour class, then administered the Element 1 test. I PASSED!!!! Then another 1 hour class (Element 3), I PASSED AGAIN. Everyone of us (5) passed the test (some of the guys hadn't even studied before, the class was that good!!!!!! 3 of us were offered the Radar Endorcement, so what the heck, we did the class and passed it too! BEST OF ALL, THEY WERE THE LOWEST PRICES OF ALL OF THE PREPARATION COURSES, AND ONLY TOOK 1 DAY, NOT 2-6 DAYS!!!!
Im going to take the GMDSS maintainer class next Saturday just to get the license!!!! (It'll look good on my resume).
Anyway, thanks Rob for mentioning your success with them. Now I have my license, and the respect it brings...
Take Care,
Jeanette Robison

Kinda strange, as here in Houston, I always found the 5/8 to have less picket fencing than a 1/4 wave.
Also better range in general. I kinda suspect the grounding to the car body as being suspect on that RS antenna. Or maybe was mounted in a spot that didn't provide a good ground plane for that antenna. On the 5/8, a good ground image is needed or you develop a high angle lobe. This would cause the problem you mention. With the mag mounts, you don't get that great a ground connection by the coupling to the body thru the paint with the base/magnet. I found in the past, using a larson 5/8, changing from a mag mount to a hole mount, made quite a difference in performance. Also some 5/8's may be better than others. The whips on larson are more efficient than some brands. Something with the plating...Also the loading coils are fairly good. Dunno about the RS ant too much. MK

Hi Gang,

Does anyone have an original, or a copy of the Kenwood TS-830S service manual they are willing to sell?. I need one to align the rig. Please respond to kknickelson@mmm.com

Thanks,
Kevin W0KKN

Opinions expressed herein are my own and may not represent those of my employer.

2084. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7vki4h$p29$1@news.hawaii.edu>
Source record: 95242
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Make no mistake THIS TIME.

My statement is NOT what YOU choose to interpret it as!

And I do just fine attracting quality folks to ham radio, thank you.
I have NO intention of being blackmailed by YOUR attitude.

I have a Tripp Lite PR-10b (13.8vdc) power supply for sale. It's rated
at 10A surge, 7.5A continuous. (Very similar to Astron RS-10A supply.)
It is in excellent condition and works fine. I went to a bigger supply.

Only $50 plus shipping!

From: Mike <mike@home.net>
Message-ID: <381ddf73_1@news.eticomm.net>
Source record: 95247

I am looking to buy a mobile 10 meter radio. I don't know that much about Ham radio, but, I am trying. I want to get the right radio the first time so I don't have to buy the one I really need later on. I don't really care about CB. I slip seat every night so I guess I need one that will work in different trucks. Have a pretty good antenna but I'm concerned about the power supply from the truck. Any help will be greatly appreciated.

Mike

I'd definitely prefer the Yaesu FT-100 to the Icom 706 since it's got a
smaller face, more memory channels, and a wider receive range. Is the
FT-100's AM transmit and receive acceptable? A little bassy is
perfectly acceptable if transmission and reception is otherwise
understandable.

That sounds like the right cable. The white cable has a round cb mic style connector that you can adapter for the mobiles and older portables.

Hi all,
Since you are discussing programming cables , I have found that the programming cable for the Icom 32a radio works for the Yaeus vx-1r radio and the adms-1e software, and the Yaesu cable works on the Icom.

2097. SB 200

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-01 00:00:00 UTC
From: John - KI4RO <johnpsmith@freewwweb.com>
Message-ID: <7vkvh7$h3g$1@news.smartworld.net>
Source record: 95255

I recently inherited an SB200 and it seems to be working well after I did a bit of work to it. Question is, what's normal output for this guy? I am using an MFJ 989C tuner to feed a CF Zepp and generally can get anything from about 400 watts (10 meters) up to about 700 watts (75 meters) on the meter of the tuner. Is that normal or should I expect more/less?

Also, any hints, tips or modifications that you would care to share with me would be greatly appreciated.

John

2098. Radio Snack HTX-10 initial non-operational impressions...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-01 00:00:00 UTC
From: bill <bwiese>
Message-ID: <01bf24b1$866e2540$6c84c03f@bill_pc>
Source record: 95256

[Just some random comments here...these are based on a
1st look w/o benefit of a service manual or schematic.]

Just picked up my HTX-10. Looks good but wished it had CW
(more about this later...). For $149.95 not bad at all
though... This rig is similar to the TRC-485 (if I did
remember the model # correctly) SSB/AM CB rig.

Also ordered the service manual just to see what I can
modify :-) as the regular manual is very "consumer-like"
and doesn't come with a schematic or even a functional
block diagram.

While I haven't put it on the air yet (soon, soon!) I did
decide to open it up and see what's in it. Interior is pretty
clean and looks to be quality (other than the mike!); main
(radio) board appears to have audio, mod/demod, RF chain, etc.
and VCO; the PLL synth and the control 4-bit CPU are on the
"front panel" control & display board. The up/down mike
that comes with the radio (6-pin threaded-ring connector,
not a DIN plug) may perform OK but looks/feels real light,
cheesy & not substantial - not nearly as good as the rig
appears.

The front panel board is T-mounted to the main board and
they're soldered together at the T joint. The rigid radio
frame stops things from flexing. So be careful to not damage/
flex this joint if you do a full disassembly or you might
damage PCB/tear foil, etc.

This rig offers 1kHz PLL steps, w/the RIT/clarifier "Fine"
control apparently covering the gaps. Do not believe the RIT
is also XIT (w/o modification, that is...)

There is *no* CTCSS PL or DCS encode/decode available; this'd
have to be added. Even after that, the tone freq would require
manual selection and would not be synced to freq. memory.

From the board layout (and w/o a tech manual) it looks like:

- PLL/CPU/LCD ctrlr = Sayno LC72322N
- final = dual 2SC1969 (TO-220; finned rear heatsink)
- driver = 2SC2166; (TO-220; side frame heatsink)
- AM mod (??) = 2SB778 (large; finned rear heatsink)
- some kinda Murata-style ceramic filter @ 455kHz;
- rcvr IF (?) = BA403 7-pin SIP;
- audio IC = unknown, 10 pin SIP, on side-of-case frame

mount heat sink; prob something like a
TA7205, etc.
- no PA jack but ext spkr jack is present;

Replacement of the 455kHz filter w/several (switchable) higher quality and/or narrower ones and/or addition of a xtal filter in the 1st IF would prob. add to selectivity/adj channel rejection (note: not saying these problems exist, but this prob. isn't a Kenwood 940S either :-)

Surprised that the PLL & CPU are on one chip. Would've thought tradition, etc. would've put the PLL chip on the "radio" board and left the control features on the CPU board. Oh well, a new twist... may keep some synth noise off the main board.

Does NOT look like CPU would allow external ROM w/new firmware to be attached. Checked the CPU/PLL spec, doesn't look like it'd allow external control and furthermore there are prob not enough pins as the LCD, controls and radio circuit switching/sensing probably use all available I/O pins...

At first I thought the "transformer" in this area was what it appeared to be until I saw it had only 2 leads, so it's some kinda choke/inductor. There's an open jumper block near a 10ohm power resistor/RF choke in what seems to be the modulator section and a pair of closed jumper blocks near the final area. Hmmmm....

The VCO/mix area on the main board has a dollop of wax (well, more than a dollop :-)) coating about 1.25 sq. in. of parts, probably to avoid microphonics.

Vol/Sq/RF gain are conventional pots. Not sure if the "Fine" (RIT) control is a shaft encoder (??) or pot from its appearance. FWIW, there are no obvious "cut me" jumpers, etc. on the CPU/PLL board.

Adding CW? Well, you'd have to "fake out" the controller. Run the receiver on a sideband, run the transmitter on FM w/no modulation source applied to VCO (i.e., FM mod path to VCO switched out). Might also switch in a narrow filter too. If the CPU control lines to the radio board for mode selection have weak/moderate pull-ups/ pull-down resistors, then forcing these lines appropriately hi or low for our "fake CW mode" may be an option, else traces will have to be broken. Key would then be mic switch; "Fine" control is BFO pitch.

If the speaker is removed from the radio there's room for another board about 5.7" x 4.2" (working area about 5.5" x 3.9"), frame already set up w/bent-down tabs & drilled holes. Should allow 1/2" or even a tad more of component height/clearance. Perfect for more filters, PL encode/PL squelch, a small CPU to sync PL tone w/ memories or freq, power amp, etc.

Further reports as I get it on the air (one of these days; very
busy at work!) and get the service manual...

2102. WANTED: Yaesu MD-1C8 Desktop Microphone...

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-01 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <19991101185135.11854.00000513@ng-fe1.aol.com>
Source record: 95260

Hello,

I am looking for a desktop microphone for a Yaesu FT-900AT. Manual suggests a "MD-1C8 Desktop Microphone." So I guess I am looking for one of these or any other Yaesu desktop microphone that will work perfectly with the FT-900AT.

If an option, I have the following items for trade;

SEA Model 1612B HF Coupler w/ Manual..like SGC...tunes 1.6 thru 25.0
MFJ 407C Deluxe Electronic Keyer - Mint w/ manual
ICOM SM-6 Desktop Microphone in box w/ manual

I am also looking for a Yaesu FP-800 power supply for sale used...

Thanks,

Jason S. Hulet

2103. Collins Filter added to FT-900AT after market???

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-01 00:00:00 UTC
From: jhulet@aol.com

Source record: 95261

Hello,

Can a Yaesu FT-900AT have the Collins filter added to it? Where would you purchase this filter and any idea what is involved it installing it? I was just wondering that when the FT-900 was still being sold new did you have to either purchase the FT-900 or the FT-900CAT? or the FT-900AT. Was the Collins filter something you could add later down the road? or did it have to be installed at the factory?

thanks to anyone with an answer!

Jason S. Hulet

I was wondering if all the bugs are out of the FT-100? I owned one back in may but had to rturn it for a refund. Had broadcast stations all over the 10 meter band.

I might try another one if the bugs are out.

If you're into CW, I found the XF-115C to be the best CW filter. It is a Collins 500hz filter that I think is an option for the FT1kMP.

2113. DEALER MARKUP OR PROFIT ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-02 00:00:00 UTC
From: dlr18sh@aol.com
Message-ID: <19991102141509.24299.00001161@ng-fb1.aol.com>
Source record: 95143

There have been a lot of comments on Dealer markup the last few days and I want to add my comments. There is a big difference in 10 % markup and 10 % profit. Markup means the dealer paid $1000 for the radio and puts a price tag of $1100 for it. He adds $100 to what he paid for it.
Dealer 10 % profit means he made a 10 % profit after all his expenses were
paid (ie rent, employee salaries and benefits, electricity, 1-800 telephone line, heat, advertising and much more.

A gentleman who claimed to actually be in the Ham business said he only marks up the $1000 popular radios 5% to 10 % . That means he made $100 markup but he now has to pay wages, rent, electricity , insurance, telephone, advertising. I guess if he sold 10000000 radios he could do it but the Ham stores that I have been in appear to be pretty quiet with a lot of lookers spinning the dials and perhaps buying a QST magazine or a handheld. I've yet to see a guy buy a $$$ HF radio.
I have operated several business in the past . The restaturant business has a 25 % to 35 % food cost on items you buy there. However after all the costs associated with the food business we made a $ 15 % profit after all was done. I cannot believe a Ham dealer could possibly run profitable business on a 5 % markup and then take operating costs from that. The Ham Dealer would be far better buying tax free municiple bonds which are guaranteed to pay 8 % profit and are tax free. Or the stock market where I was making 30 % until last month and it average out to 10 % (oh well).
toake care, Tim

It's important to realize that "profit" is realized only after all
expenses are paid - including the wholesale cost of the equipment, the
labor, insurance, warrantee repair costs/losses and the fixed asset
overhead. You don't believe that "non-profit" organizations don't pay
their employees, do you? Profit is what gets paid out in dividends or
used for business expansion.

Mark,

Where are you located?
I'm debating on what rig to get...TS-711A,
FT-726R (owned both before) or newer
VHF/UHF Rig. Your offer sounds good,
would like to see it if you're in the
area. I work in Arlington Heights
and live in Spring Grove, Il.

Aside from the speaker howl - long since taken care of - it is a great radio. I have a short duck on it I got at HRO. Use it on 2 meters mostly and for a scanner on the sheriff and fire frequencies (live in a rural area). Made a nice leather case for it too. Protects it from the elements and being dropped. Case attaches to my belt - solidly.

Bob,

Just pop down to the local Radio Shack and pick up one of the
speaker-mics that they have for the HTX-202. It works fine with my W32A
- good audio in both directions and a good feel.

http://www.kingsmith-software.com/prod_ft847.htm

Has a nice program that is about to be upgraded with a bandscope.
It works with WISP for digital bird doppler and Winorbit for analog
doppler thru DDE.

Other programs for space are the WispDDE on Amsat that controls the
doppler and InstantTune also on AMSAT that lets Instant Track talk
to the 847.

Various year and partial years of magazine above. Some in binders.
I am located north of New Orleans area. Will sell only whole years
or partial years, no single copies.
Will consider trades for older equipment (boatanchors) or ARRL/Jones
"Handbooks". What I have is excess to my needs.

Hey Harry,

You ever hear anything more from that lunatic who was threatening to report you to the "internet authorities" {sic} for refusing to design and furnish him with a schematic and construction plans for the multi-KW RF generator for drying firewood? You sure attract some odd ones, he he. Keep up the good work, I love your site, and soon will build the complete Cigar Box RX/TX pair (have the RX done).

Hi There
I have a for sale #Fluke 5200A Programmble AC Calibrator#.
$700.00 plus shipping
Money order only.

*Seven voltage ranges from 1 mV to 1000V.
*6 1/2 digit resolution.
*Output frequencies from 10 Hz to 1 MHz.
*GPIB/IEEE-488 system interface available.
*Phase-lock input.
*Completely guarded.
*Short and overlord protected.
!!!Good working condition!!!
714-778-5151
Thank you!!!

2129. WTD: 6m/2m/70cm mobile antenna advise

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-02 00:00:00 UTC
From: w6nct@arrl.net
Message-ID: <381F87E6.AF048B93@arrl.net>
Source record: 95159

Does anyone have any (pro or con) recommendations for a mobile 6m/2m/70cm antenna.

I am especially interested in one that'll work in marine applications (IE., no/limited ground plane), and one that has a flat and low SWR across all three bands.

Thx

Discounting items "30% from retail" means that they sold them for 30% less than suggested retail price - not 30% less than what other dealers might charge. Such a discount does not mean that the item was sold at a loss. It is probably fair to say, however, that they weren't making much money on those items.

Folks,
I am a pilot with a FT-50R that I would like to modify to transmit on the aviation bands as a backup radio in my glider (I have no engine and the battery does go dead). Anyway to do this with ADMS-1D, I have read about using ADMS-1C to do place the radio in a european mode that includes the bands I want, but it does not seem to work for me.

Cheers,

Dave Mencin

DON'T attempt a solid state replacement - unless you ALSO install a
dropping resistor to comphensate for the increased voltage, otherwise
you may damage parts, and make erroneous test readings...

Been there, done that...

I find AM reception to be good... you might want to consider the 6KHz IF
filter though. The radio isn't really very selective on AM otherwise. I
don't
get to use it on AM much but it sounds as good as any CB radio as far as I'm
concerned.

2154. WTD KENWOOD TR7850 Manual

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-02 00:00:00 UTC
From: chaconne@worldnet.att.net
Message-ID: <381e62fc.36032740@netnews.worldnet.att.net>
Source record: 95276

Does anyone have a Kenwood TR7850 op manual. This is
a two meter fm rig from the early 1980's. I can arrange to
duplicate and return or to reimburse for copying charges.

email to chaconne@worldnet.att.net

Thanks

Jon Teske, W3JT

2155. FA: ### MOTOROLA SABER I - VHF SECURE

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-02 00:00:00 UTC

For Sale: Motorola Saber I Secure - VHF w/Accessories

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=189081427

Model #- H99QX053H
Factory ID - H43QXN7139CN

12 channels
6 watt output
136-150Mhz
SECURENET-S capable
Emergency Button
CTCSS/DCS/PL/MDC600/MDC1200 capable
Radio comes programmed to your specs

Radio Comes With:
Good Medium-Capacity Battery
Antenna
Motorola Porta-Pocket Charger - NTN5563A
Motorola Leather Holster/Case for Medium Battery
RIB Programming Cable
Saber RSS Programming Software (you must have the necessary licenses to use it)

This unit is in excellent shape (10 out of 10 cosmetically) and is guaranteed to be in 100% working condition. All included accessories are genuine Motorola parts and in good condition. Selling because it is not needed anymore. I've been told that this package is worth over $1500! Reserve price is VERY reasonable. Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

>W1WOW

I added the Yaesu-offered SSB filter and the INRAD 300 Hz CW filter to my FT900;
I then sold it - big mistake - it was such a nice HF rig - but it all worked
fine with those filters and it was worth the $$ to make the changes.

For sale:

Hewlett Packard HP-180 scope with HP-1801 dual amplifier module
and HP-1822 time base module. Has blue screen filter in a pouch
with it. Powers up, lights, and has trace. Beyond that I haven't
a clue as to condition. It looks fine and came from a working
AV repair bench auction lot I purchased from a school district.
Missing the carry handle and has ID markings on it on the sides.
Overall it appears to be in good condition. All the knobs and
switches work and are there, and it's not dinged up.

Can email jpegs to serious inquiries.

This unit is a bit out of my realm, so I haven't a clue as to
pricing. Please make an offer. Will be shipped double boxed
via US Mail. Not all that heavy, so should ship fine.

> too much. MK
> --
> http://web.wt.net/~nm5k

Thanks for the input. The R/S antenna has what looks like a black anodized surface on the whip, but it could be many different materials. I matched up the antenna with an SWR meter and found that it was resonant in the middle of the 2M band and displayed around 1.5/1 SWR at the ends of the band. As I mentioned in an earlier posting, the antenna was placed in the middle of the roof of my 1998 Dodge Durango, so I suspect that it had a sufficient ground plane. I believe that there would also have been enough capacitive coupling between the magmount baseplate and the car body, but that's a bit difficult to assess. The antenna assembly was straightforward, although there was a little rubber gasket that could be placed in more than one way between the screw-on loading coil and the baseplate.

The performance issue remains a bit of a mystery, but at least I have a workable setup with the through-glass dual-bander.

Hi Will,

No, he has been remarkably quite. No doubt he tried to use his "wasta" to do something but failled. I should have copied him the Heathkit linear and HF TX and charged him for it!

Interesting that I have had yet another request from a different source, the guy wanted electronic info to build an induction fornace. He said it would be of benefit to us "hams" since we could then make custom aloys. In all my years in hamradio I have always tried to avoid melting metals in my shack - success rate approaching 99%! You can read this yourself if you look at the message board.

>tropical band targets).

My $0.02.

The RX-320's not very impressive for BCB and below, and forget
about using the supplied whip for any sort of DXing. This radio's
quiet front-end fairly begs for a big, quiiet outdoor antenna to be
connected to it. Luckily at my location, I can do just that, and the
results have been impressive.

With a 90' T2FD antenna in my backyard I was
able to hear *three* outlets of ABC (Australian Broadcasting Company
ABC, not the Corporate Mouse ABC!) starting at 2.390 Mhz or
thereabouts just fine on the RX-320. These are difficult signals,
because of the frequency, and the RX-320 did more or less as well
jas the Kenwood 570 did during a little informal A/B testing one
pre-sunrise morning. (The Kenwood did a lot better on SSB, and
pulling out extremely weak signals using the DSP controls, but
this is only noticeable with a very marginal signal.)

Same with NBC Port Moresby on 4.890 Mhz. Nice, strong signal,
good signal-to-noise ratio on the 320, maybe a tad better on the
Kenwood, but not enough to strongly prefer one over the other.

So, it's a near-DX machine for $300. Next step up is closer to $1000!

Just my thoughts.

>battery does go dead). Anyway to do this with ADMS-1D, I have read about
>using ADMS-1C to do place the radio in a european mode that includes the
>bands I want, but it does not seem to work for me.

Forget it. Aviation communications are done using AM, not FM. The
FT-50 has an AM detector, so you can put it into AM mode to listen to
airband communications.

But the transmitter is FM only. There's no modification to change
this, since it's not a software restriction - the radio simply does not
include the necessary circuitry to transmit in AM.

Yaesu does make an aviation band radio that seems to use a lot of
mechanical parts from the FT-50.

Dave

2180. WANTED: Yaesu FT-600

2185. PIR Motion Detectors, RF-Linked

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-03 00:00:00 UTC
From: martinejones@my-deja.com
Message-ID: <7vpe0rqhb1@nnrp1.deja.com>
Source record: 95057
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap

I swapped a nice pool cue for a case of these,
and have more than I can ever use. They consist
of a passive-infrared motion detector and a UHF
transmitter housed in one white plastic case
about 5" high (they look just like the ones
you see on the wall in banks and credit
unions). When someone walks within about
40 feet in front, the unit transmits a
"telephone-ringing" sound to a UHF FM receiver
(lower portion of 70-cm ham-radio band).

There is also a "tamper switch", whereby the
unit sends the alarm if anyone removes it's
cover. They use standard 9-volt alkaline
batteries.

I use these when I go camping. I put them
on trees near the approach paths to my site,
and sleep with my handheld scanner in the
tent to receive the alarms.

If you don't need the wireless feature (or
don't have a receiver) you can also tap off
the internal voltage supplied to the RF PCB
and use this to run a piezo alarm or a relay.

A four-pack is enough to protect a the major
areas inside a house, or a campsite from all
directions. 4 for $25, new in boxes and
packaged with mounting hardware. Batteries
not included, you pick up or pay UPS.

HELP!

I've had my lovely Standard C528 dual band handheld for the past 8 years without any problems and now it has a major problem. Whenever I turn it on it resets to default freq. 146.000 and 433.000 and Transmits on Med-Power on VHF and Can't Be Turned Off!!!

No help doing the memory reset on the side, it just resets and starts TX'ing on 146.000 again !!!

Does anyone know how to solve this rather unusual problem.

BTW my friend (another HAM) purchased the same radio with me in 1991 and is Experiencing the EXACT SAME DRAMAS, so it's no just me.

PLEASE HELP ME BRING THIS RADIO BACK TO LIFE AGAIN...

If you loose money on every sale how can it be made up thru volume? Read
what you said and explain it. Increased sales just means increased
losses.
They discounted them 30% from "Suggested Retail" which was not what
most dealers were selling them for...

Maybe smart enough to find yourself on eBay but NOT smart enough to set your newsgroup filters so you never see what you find objectionable?

Let's NOT start this thread again!!!!

Posters should start their SUBJECT with "FA:" so those smart enough to know about the tools available on the Net can filter out those and they won't have to take an additional does of their heart medication when flustered by a posting they don't like.

Of course some just want to call attention to themselves by starting another round of "gripes."

That's just an old joke. You ask someone how their prices can be so low, and
they reply "our prices are so low that we lose money on each sale, but.....
you know the rest.

2205. MFJ Boom Mike Headset

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-03 00:00:00 UTC
From: hasan schiers <schiers@netins.net>
Message-ID: <7vpntiito1@ins21.netins.net>
Source record: 95077

I took a chance this past week and ordered the new MFJ Boom Mike Headset that appeared in their most recent catalogue. I used it during the CQ WW DX contest last weekend with my TS-870s... what a pleasant surprise. I saved about 50 bucks over the Heil and it worked perfectly. The headphones were VERY comfortable and had good audio quality. I wore them for about 15 hours total. The tx audio was a bit bassy (not worthy of complaint, but at least should be noted) from initial reports so I enabled the TX EQ button on the TS-870s and audio reports were superb. With about 12 dB of RF clipping and the TX EQ enabled, it sounded very good according to on air reports and in the local monitor mode where I could listen to my own signal.

Anyone looking for some savings on a dual earphone, boom mike headset for vox rigs only, might be quite pleased with the MFJ.

It has no PTT switch and you can buy a cable to match your radio or make your own.

to
> airband communications.

Yep. That's true.

> But the transmitter is FM only. There's no modification to change
> this, since it's not a software restriction - the radio simply does
not
> include the necessary circuitry to transmit in AM.

That's true too! BUT if you will using TX frequency in FM +/- 5 kHz
from RX frequency, your AM avia station will receive FM very well. My
friend, who like to fly use amateur radio like Icom T7H or W32A
without
problem. This trick help you anyway

> Yaesu does make an aviation band radio that seems to use a lot of

2210. Heath SB-200 and other Heath items FS

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-03 00:00:00 UTC
From: Ken Simpson <W8EK@fdt.net>
Message-ID: <Mu_T3.1558$J55.91223@monger.newsread.com>
Source record: 95082

Heath items for sale:

Heath SB-200 HF linear amplifier. Covers 80 thru 10
meters. 1200 W PEP input. Presently wired for 110
V AC, but can be changed to 220 V AC. This unit is
in good shape, both electrically and cosmetically.
Manual included for $350

Heath HM-102 Wattmeter. This is the HF version of the
wattmeter. It has scales for 200 W and 2000W, as well as SWR.
It has a removable remote sensor, so the meter can be about
3 feet from the sensor. This looks in great shape, not quite
like new, but close. Manual included for $ 40

Heath HD-15 phone patch. Separate control of transmit and
receive audio, with nice VU meter. Will work with high or low
impedance mic input. Manual included for $25

Heath IP-27 low voltage power supply. It is fully adjustable
from about 0.5 Volts to 50 Volts, and has current limiting that
is built in and adjustable from a couple ma up to 1.5 amps.
There is also a nice large meter for measuring current or
voltage. The supply is "floating", so can be used for
either plus or minus supplies. It is the "Heath Brown"
color. Manual included. $100

I also have the following Heath manuals available. All are
originals, and are in good condition.

HN-31 A Dummy Load manual. Note the "A" suffix. This is for the
newer model that does not have the tap for the scope. The
manual is in the smaller "half size" format. This manual looks
like new, and has NO check marks in it. $ 8

GR-2050 TV Set - Five book set $ 15
GRA-601 TV Clock $ 5

All manuals are in good shape. All are originals and not copies.

Prices do not include shipping from Florida.

Thanks.

73,

Ken, W8EK

2214. Re: Help with TS-830!!

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-03 00:00:00 UTC
From: John Buck <kh7t@arrl.net>
Message-ID: <382086F2.95D5B8F2@arrl.net>
Source record: 95086

The TS820 requires a jumper in the back if the external
VFO is not connected. The TS830 may be the same.

After that, contact cleaner and moving the cable
connectors including board to board connectors inside the
counter module is in order. Use good quality contact cleaner
with NoOx additives. Do not even think about WD40.
Check the board grounds via screws also.

I recently restored an old 820 with similar symptoms this way.

John KH7T

I had an R5 and broke a "top hat" -- didn't seem to affect the operation perceptible. But I ordered new ones from Cushcraft any way The assembly manual is on-line at URL:
http://www.cushcraft.com/support/tlai.htm

A few tips -- don't rely on the last guy setting it up properly. Heard of a lot of cases where the dimensions were incorrect and the antenna won't tune. Check every dimension vs the manual. The base insulator at the bottom is particularly critical. Keep the antenna away from buildings and trees if at all possible.

Be especially careful of running high power into an R7 --- especially if the VSWR is above 2:1. Lots of folks frazzled traps by using a tuner and running high power. A tuner does NOT change the VSWR into the antenna -- only matches xceiver to antenna.

>problem. This trick help you anyway

Well, maybe. For this to work, you're depending on the FM signal ending up on the "skirts" of one of the filters in the receiver, probably the IF filter. In this case, frequency changes result in signal amplitude changes, which are detected as AM. But how well it works depends on how wide the receiver's filter is, how much the transmitter is off frequency, and how much the receiver's several oscillators are off frequency.

Normally, an AM transmitter/receiver system or an FM transmitter/receiver system are designed so that despite the tolerances on all the components, the transmit frequency falls in the flat portion of the receiver bandwidth, so all transmitters are received about equally well. With this scheme, tolerances could add up in such a way that one transmitter is received well on one receiver and not at all on another, even though all are working properly.

So, I'd say this is something worth trying if your main radio dies and an FM HT is all you have with you. But I wouldn't *depend* on it working.

>> Yaesu does make an aviation band radio that seems to use a lot of
>> mechanical parts from the FT-50.

>Yep, but the price...!

Yeah, like anything for aviation.

However, there were a number of manufacturers of rather large aviation handheld radios a number of years ago. They are no longer fashionable since the current Icom and Yaesu radios are so much smaller. But they work fine, and should be quite a bit cheaper used because they are out of fashion. (I have an old Icom A20).

Hi Guys!

Trying to get some bucks up to get some gear and catch up some bills.

These items are in XLNT condition and work great. (Add shipping)

1 - Kenwood 820S w/MC-50 desk mic, copy of manual. $240

2 - FT-50RD - $240 - HD (1800 mA) battery, drop in charger, adapter, manual, 3 antennas.

3 - Spirit Pro UHF HT - $40 - 2 watts, 464.55 mhz good cond/works great.

4 - Casio TV-470 mini TV - $40 - 2" screen. Runs on 4 AA's. Real cute and works great.

5 - Hallicrafters S20R receiver - $80 - Old and dirty, but completely intact. ie: Needs restoring, but it is all there.

Will consider trades for other gear - ie:

13.8vdc/20 amp xlnt cond power supply.

2 meter or 2m/70cm or 2m all mode rig - must have ctcss encode and decode, decent high power, support non standard duplex offsets, be fairly current and in good shape.

San Fernando Valley area of Southern California.

Thanks - 73 - Ed - KF6YKM - 818-891-9230

- Leave a message if I'm out and I'll call you back.

I have a Standard C-168A 2 meter HT. Like new condition. I think I've charged the battery twice - I don't have much interest in 2m. The radio has 40 memories. Covers 118 to 172 MHz with AM for the aircraft band - receive only outside of the ham band. It comes with the standard 7.2 v 700 mAh battery, wall charger and speaker mic CMP115. $150 or best offer - shipping extra.
I also have a rfconcepts rfc 2-117 2m amp. I swapped for it and have never put it in my car. The previous owned measured it at 150 watts out with 5 watts in his car with it running. It has a preamp built in. $150 or best offer - shipping extra.

Thanks,
Tom WA7DET

Stop and take a deep breath guys.

I think "mailfrmpa" whoever he is was quoting the punch line from an old aggie joke that was floating around long before Alinco, Kenwood, etc discovered America. I am a Texas wheat farmer and am very familiar with that economic theory. Have spent a lifetime trying to perfect it.

2250. Kenwood TS-930S power supply behavior

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-03 00:00:00 UTC
From: mjlinden@mcs.net
Message-ID: <7vnuv9$k18$1@Nntp1.mcs.net>
Source record: 95180

I've noticed a strange behavior with the power supply in a Kenwood TS-930S that I recently acquired. When I place the unit into transmit (key down in CW/Tune, PTT on SSB) the meter lamp and fluorescent display get brighter indicating that the 28 volt final power supply voltage has increased from receive?!

This voltage increase occurs in Tune, CW, and SSB modes even if the carrier and mic gain controls are turned all of the way down (little or no RF)? During transmit, the collector voltage is off the scale on some bands and right around 30 volts on some others. When I transmit on some bands, the voltage appears to go up during the switch from receive to transmit, but then drops back down (as indicated by watching the meter lamp (which runs off of the 28v supply).

Output from the unit in CW is about 120 watts which is right where it should be. And, other than this anomoly, the unit appears to work fine. Have any of you folks ever experienced this situation with the 930? Seems like it could be a poor-RF-ground issue, but then why would it happen with carrier and mic controls all of the way down?

When I get some time I plan on going in and looking at some test points. Meanwhile, I'd appreciate any information on this...

Thanks, Michael N9BDF

Source record: 95185

Hello,

I have aquired a "SEA Model 1612B HF Coupler.

$175.00 + Shipping...

Frequency Range: 1.6 to 25.0 MHz
RF Power Capability: 150 watts PEP
Input Impedance: 50 ohms
Power Requirement: 13.6 VDC negative ground
Operating Currents: 2 Amps
Tuning time: "Learn Mode", Typically less then 5 seconds
"Educated Mode". Approximately 20
milliseconds
Mounting: Any position
Enviromental Temps: -30C to +60C
Size: 15"x12"x5.5"
Case Construction: Waterproof, Fiberglass
Control Cable: No. 20 Guage, 3 or 4 wires

Discription as read from its Manual;

OVERALL DESCRIPTION

The SEA 1612B is a fully automatic antenna coupler,designed for a wide range of applications. This product features an advanced microprocessor based tuning algorithm which allows this antenna coupler to tune up on normal voice signals from the transmitter, and also remember which network constants are required for a given operating frequency. This feature permits the antenna coupler, once the "learning" operation is completed, to retune a given frequency in approximately 20 milliseconds. This is less then the time required to say "hello". The coupler operation is completely automatic and requires no operator intervention. If the antenna system is altered or replaced, the coupler will automatically "relearn" the required constants. During the learning period, operating is somewhat slower and, depending on the particular frequency/antenna combination, up to 5 seconds may be required to achieve a matched condition. Once the antena is properly matched, the coupler signals this condition by pulling a control line low. This control signal may be used to operate an "all tuned" indicator of some kind at the operators' Transceivers. Such an indicator is provided on the SEA 222 and SEA 223 radio-telephones.

Cross-posted to: rec.radio.amateur.homebrew,sci.electronics.design,sci.electronics.components,alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner,rec.radio.amateur.equipment

Hello again,

Well, after hard work (and the help of Chip directory,
http://www.hitex.com/chipdir/chipdir.html) I managed to idetify this
chip as a Mitsubishi part. I've even found similar parts with almost
identical partnames (+/- one digit...) even with several identical pin
names, which means I'm on the right track...
Reminder: this is a 20pin SSOP chip, RF synthesizer with serial input.
I need the full data sheet to program it.
So, is there anyone on this newsgroup with access to a Mitsubishi RF
catalog or other info source, to help me get the full data sheet
(better yet, to give me a pointer to a web site with proper PDF file)?

Thanks and best regards,
T-man

Note: when posting a Reply, please send me a copy
via email too so I don't miss any responses. Don't

The "570D" doesn't have 6m. The "570S" does. The "G" is an upgrade that
can be applied to either one.

Hello All:

We have a Motorola GP-68 UHF that suddenly went deaf. By "deaf" I mean DEAF! With two 68's side by side, this one cannot hear the other one, transmit is fine on both units. If anyone knows of this problem or knows of someone who can fix these, please e-mail to: n3yyp@arrl.net or jsartori@bellatlantic.net

2266. Info Wanted: CT-17 Interface with Icom-756

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-04 00:00:00 UTC
From: "Dr. Edward H. Scissons" <psa@sk.sympatico.ca>
Message-ID: <%9iU3.847$D811.6029477@tomcat.sk.sympatico.ca>
Source record: 94996

I am considering adding the CT-17 interface on my Icom 756. I am interested in comments from others who are using this kind of setup. I would probably use the interface as much for shortwave listening as for communications so would appreciate comments in this regard as I am considering getting a Ten Tec RX-320 if the Icom with interface is not very good for shortwave. Also what kind of software do others recommend?

Any info appreciated.

Thanks

Ed VE5VX

2269. FS: TS-930S/AT, SP-930, SM-200 w/pan adapter

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-04 00:00:00 UTC
From: sims@sauron.msfc.nasa.gov
Message-ID: <7vseah$r6u$1@hammer.msfc.nasa.gov>
Source record: 94999

I have the following equipment for sale. Everything works flawlessly and are
in excellent condition.

TS-390S/AT - I have the 250 HZ CW filter and 2.5 KHz SSB filter installed. Comes
with an automatic antenna tuner. No appreciable marks on radio face. There co
uld be a few marks on the tops or side, but nothing noticeable. Never had a pro
blem with the radio. S/N can be given on request. I am the original owner. As
king $900 OBO (you pay shipping if needed). Also have the SP-930 matching speak
er to go along with it. Again in very good shape. Both are 9 to 9+ in conditio
n.

Mods to the radio:
1) Has the standard mods for dial lock, etc.
2) Has the mod for use with the SM-220 pan adapter (which is also for s
ale, listed below)
3) Undocumented mod that I added that brings out the band data for use
with a remote coax switch system. This mod can easily be removed prior to pucha
se if needed.
4) Mod to allow transmit on any frequency.
5) I removed the battery compartment to alleviate and possibility with
battery acid leaking into the radio (was/is a problem with the 930).

SM-220 - The SM-220 with the pan adapter. I am not the original owner but it is
9 to 9+ in condition as well. Asking $350 OBO plus shipping if applicable.

Both of the units have worked together for many years and I can give demo it you
are interested.

If you are interested give me a call. I am located in Decatur, AL.

I have had just about every Icom HF rig so far except for the 781 and
I like the 746 better than any I have had so far.. including the 756,
overpriced and bad display.
I have 2 of the 746 rigs , that is the only reason I have one listed
for sale on the net. I am keeping the other one.
I agree that there were so many sold , that is why you see them on the
net more than say a 781. I say they are the best buy for a muilty band
rig on the market today.
K5JOE, just my opinion.

So I'm finding out - I thought the "G" designation signified the 6
meter coverage...

I wonder how many here have done the available $125 "G" kenwood
upgrade to the original "D" models, and if the think it was worth it?
I have one, and might be interested if I hear enough positive
feedback...

I have a Micor Base converted a repeater. It has new helical filters on
front end and completely gone over by local Motorola tech for the 2m
band. It comes with a 7k
controller, with all options, including pl. Also it comes with duplexes.

All come with service, and or user manuals.
The scom 7k comes with the windows programming software.

Model numbers are as follows;

Motorola Micor
893RCB-3145B-RH52

Telewave duplexer
TPRD1556

Scom 7k controller

Asking a fair price.

All ready to go on 2m.

Please, serious inquiries only, buyer pays shipping,
and insurance.

Remove the bottom of the radio.

Remove the silver shield on the RF unit.

Cut diode D4

Try it. If it works replace the diode if you want to listen to below
500khz, otherwise put it all back together.

>$500 and would appreciate some recommendations.

Hi Ira...

First, what type of vehicle will the rig be in?

Second, how important are cosmetic considerations to your installation (are you a "clean car" type of guy).

Third, will your operations be primarily while driving or while stationary?

Providing this info will go a long way towards obtaining proper suggestions and advice.

One of the best rigs on the market, today. I won't sell mine to "trade up" to some other more expensive rigs. Best bang for the buck with IF DSP that really works. I'd bet there are so many on the market because so many were sold. There are a lot of folks who insist on having the "Latest & Greatest".

Take advantage of the low prices and get one.

New in the box Standard radio C178A 2m HT. Just purchaced 4 days ago at
the Minnesota hamfest. It is not what I really wanted. Will sell for
exactly what I paid for it
$100. Plus whatever the shipping will be. Unless your local to the greater
Minneapolis/St.Paul MN area.
Has 40 memories, 7.2v battery pack and wall charger. Covers standard out
of band
coverage ie 132-172??? Does do AM for the air craft band. Lots of features.
Great little 2m HT for the price. I just want more.

most of the MFJ products I've had are junk. I had to "repair" the unit before it would work. My blind Grandmother sould solder better. However, the MFJ 25 amp power supply is a decnt deal Only because MFJ has nothing to do with it except for silkscreening the front. The supply is another brand. I think it is in the AES catalogue right next to the MFJ and looks identical.

Source record: 95128

Hello,

I have aquired a "SEA Model 1612B HF Coupler.

$175.00 + Shipping...

Frequency Range: 1.6 to 25.0 MHz
RF Power Capability: 150 watts PEP
Input Impedance: 50 ohms
Power Requirement: 13.6 VDC negative ground
Operating Currents: 2 Amps
Tuning time: "Learn Mode", Typically less then 5 seconds
"Educated Mode". Approximately 20
milliseconds
Mounting: Any position
Enviromental Temps: -30C to +60C
Size: 15"x12"x5.5"
Case Construction: Waterproof, Fiberglass
Control Cable: No. 20 Guage, 3 or 4 wires

Discription as read from its Manual;

OVERALL DESCRIPTION

The SEA 1612B is a fully automatic antenna coupler,designed for a wide range of applications. This product features an advanced microprocessor based tuning algorithm which allows this antenna coupler to tune up on normal voice signals from the transmitter, and also remember which network constants are required for a given operating frequency. This feature permits the antenna coupler, once the "learning" operation is completed, to retune a given frequency in approximately 20 milliseconds. This is less then the time required to say "hello". The coupler operation is completely automatic and requires no operator intervention. If the antenna system is altered or replaced, the coupler will automatically "relearn" the required constants. During the learning period, operating is somewhat slower and, depending on the particular frequency/antenna combination, up to 5 seconds may be required to achieve a matched condition. Once the antena is properly matched, the coupler signals this condition by pulling a control line low. This control signal may be used to operate an "all tuned" indicator of some kind at the operators' Transceivers. Such an indicator is provided on the SEA 222 and SEA 223 radio-telephones.

I have a Standard C-168A 2 meter HT. Like new condition. I think I've charged the battery twice - I don't have much interest in 2m. The radio has 40 memories. Covers 118 to 172 MHz with AM for the aircraft band - receive only outside of the ham band. It comes with the standard 7.2 v 700 mAh battery, wall charger and speaker mic CMP115. $150 or best offer - shipping extra.
I also have a rfconcepts rfc 2-117 2m amp. I swapped for it and have never put it in my car. The previous owned measured it at 150 watts out with 5 watts in his car with it running. It has a preamp built in. $150 or best offer - shipping extra.

Thanks,
Tom WA7DET

I bought the 920 at Dayton this year with no thoughts of ever working 6 meters...I was wrong! It is a fun band when there are openings! I did a lot of research when I was in the market for a rig, and my opinion is the 920 is the best for the bucks. 73's, Nathan KA3MTT

Very nice radio -- have had it for a year 1/2 -- love it and its little
brother, tm G707A --

Mods are at http://qrz.com/files/modfiles/mod.cgi?tmv7a.txt

I have performed the mods and they work fine -- both RX and TX.
makes it a nice scanner with the RX extend. can work marine bands,
commercial, etc with the tx band extend.

cheers

Consider the Maha MC-C777a Universal Conditioner/Charger for fifty bucks. It will properly condition and charge just about all 4.8V-to-12VDC NiCd and NiMH packs you'll ever encounter...for about half the price of some "dedicated" chargers that will only work on one battery type.

Hi all,
I have obtained a IC-P2CT and it looks identical to a ICP2AT
2m ht but itseems to be stuck on 136 Mhz. It has 10 channels,
all the same freq.
My question is does any one know the mods to convert this to
2m (ie: back to a icp2at), or worst case, how to program the ht
channels on to 2m ?
Thanks in advance.

=-=-=-=

OK Mr Honest Dealer,

Isn't surcharging (3%) on any card purchases a direct violation of
your "Merchant User's Agreement"? You had better read it again carefully
before you answer It is a direct violation & also questionable whether you
can use it for "Other than stated & named business" registered to the card
company which is stated to be the conveneince store.

Anyone who pays/paid it can cost you, "an honest dealer", more
than his reputation. Maybe you have been reported to your company already.

Buyers of anything: Please be warned & wise to "honest dealers"
who practice this tactic. It should be illegal not just immoral, violation
of his contract & plain bad business!

All he is doing is beat you out of the additional money so he can
recoup their (card company's) cut of his sale.

Such a dealer, but honest is questionable...

Remains to be seen:

Did somebody say "Cha-Ching"?

2356. Assist w/operating TS-520SE ?

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-05 00:00:00 UTC
From: David Snyder Hale <david@isi9.mtwilson.edu>
Message-ID: <7vvd4i$6dh$1@agate.berkeley.edu>
Source record: 94925

Hi,

I have a Kenwood TS-520SE that I can finally use now for more than just SWL -- I just passed my 13wpm test last weekend -- and have been having a great time these past few days working 10m, but I have some questions about proper operating / tuning of this rig, especially since I'm new to HF.

I have the manual, and I can understand the instructions on tuning, but I guess my main question is how _frequently_ does one have to run through this tuning procedure (peak the drive, dip the plate, etc.) ? Do I need to check this each time I power it on after a period of innactivity?

It seems obvious that one has to do this whenever changing bands (right?), but how about different frequencies within a band? (I mean vastly different, for instance, from the top to the bottom of a band.)

The manual says the life of the finals are dependent on the tuning period; does this mean I don't want to adjust it each day?

If I wait for the rig to warm up, will it be in about the same condition as when it was last on and tuned up, assuming I don't change bands?

Any nuances that are not in the manual?

Any other operating tips, advice, etc. pertaining to this radio would be really appreciated. Thanks!

73,

The ad mentions, "Available only where phone patch is legal." What does
that mean? I didn't realize that certain 'areas' (?) restricted it.

Those books do leave some things to be desired on the operation.

YOu need to tune the rig every time you change the frequency even in the same band. If you go more than about 5 KC or so you need to retune. maybe not a very careful one, just the plate and tuning controls. Not sure what they are called ont he 520, but usaully called the tune and load or plate and load. There should not be any differace in the tuning as the rig warms up. If you cut it off and leave it on the same frequcny and come back to it the next day it should not need retuning, but I would check it anyway as the knobs may be turned by someone such as the wife dusting or thekids playing. Just beter to be safe when you are dealing with $ 25 or more of tubes.

Can anybody help me identify this Palomar Linear Amplifier that I just picked up. I was told that it was a Skipper but that is all. It is a six tube linear that seems to have two tubes driving four more. It has a chrome top and a single edge mount meter. It has a band select that indicates that it tunes from 10 to 40 meters. I would like to find out what the power output is and see if I could locate a manual or schematic. Will gladly pay for copying/postage costs etc. Thanks Don KB6GQA

Wow, how do you respond to that? I haven't talked like that since
high school.

You should have said something like, "while Rome burned Nero fiddled".
Or, "Steve has 3 Alpha 89's and I bought the least of them". Hehe. ;>)

2365. FS: Mint D26N Mirage amp

Newsgroup: rec.radio.amateur.equipment
Date: 1999-11-05 00:00:00 UTC
From: radioears@aol.com
Message-ID: <19991105171426.02662.00001070@ng-cq1.aol.com>
Source record: 94934

New, works perfectly - with manual D26N Mirage amp for 430-450 MHz. Input 500mW to 4 watts (max), output 60 watts for 2 watts input. Modes: FM, SSB, CW and ATV. My total "on air" time with this great amp is less than 25 minutes! It sells for about $245 new and since this is essentially "new" and someone will get a good deal, I'm selling it for $200, postage and insurance paid with priority USPS delivery in U.S.
Email me at radioears@aol.com.
Thank you,
Harold

I have a Icom UX-39A band module I do not use and would like to sell or
trade.
This is the band module for the Icom 900/901a multiband radios.
I am asking $250.00 or best offer or trade for a good BP/BR UHF duplexer.
I also have data cable that comes with unit.
If interested, reply to:

Jim's questions are good, but I would work this problem from the other
end, the budget end. With this budget, you will probably need to
allocate about $100 to $150 for an antenna (I suggest the Hustler
system, and start with resonators for two or three of your favorite bands).

This leaves $400 to $350 for a radio. I suggest visiting a swapfest or
asking friends about used radios. Any radio that runs on 12V will work,
obviously smaller is better. You can make your own mobile mount, or
just strap the radio to the passenger seat.

Message-ID: <3823855B.98E3C83E@worldnet.att.net>
Source record: 94940

People swear by Bugcatchers on 75m, so you can't go wrong there. If you want to operate 10m to 20m the coil efficiency is not a major issue, so little benefit at the higher frequencies. 40m is kind of in the middle, some benefit to the Bugcatcher, but more limited advantage than 75m.

I still use the Hustler antenna system. Once nice feature is that the individual parts are relatively cheap and easy to replace. I have replaced a couple of masts after foolishly doing some 4WD driving with the HF antenna on the car. The ball mounts don't last forever with the salt on the roads. I have been using the system for a long time, and only regret that approach on 75m.

Excellent condition and works very nicely. Receive and transmit range
has been expanded by removing a single diode.

Receive is 118 to 200 and 300 to 1000 mhz.
Transmit is 136 to 196 and 373 to 498.(Covers more but not reliably.)
Cellular comes in nicely on the image frequency.

Comes with the following:
BP-173 high power battery
CP-12 cigarette lighter power adapter
OPC-254 fused power cable
Standard CMP 240 full size speaker-microphone, not a toy sized one.
Instruction manual, belt clip, wrist strap and original box.

Everything for $250. U.S. including shipping and insurance from VE2
land. Inquire by email if interested.

Date: 1999-11-05 00:00:00 UTC
From: VE2CJW <morinm@csdgs.qc.ca>
Message-ID: <7vtfll$q7n$1@nnrp1.deja.com>
Source record: 95032

This is the original model with a front mounted removable whip antenna and a rear panel UHF connector also for the antenna. The inside of the case has a place to hold 8 C size alkaline or nicads. The output power is 2.5 watts which can be reduced to .5 watt for QRP operation. It has dual VFO plus 10 memory channels. The case shows some wear but it isn't bad. The inside of the battery compartment has suffered some damage from a nicad that got too hot but it doesn't affect operation, just some bending of a baffle. It can still hold its batteries anyway.

The radio comes with the Yaesu YM-47 microphone with up/down switch, NC-11B nicad charger, carrying strap and the instruction manual with a comple schematic.

Looking to get $250. U.S. including shipping and insurance from Quebec. Inquire by email if interested.

Yes, there is an inherent problem; but not with the rig. Many hams, myself included, enjoying playing around with different rigs and when we get tired of them, we sell them and find another one to play with. Right now there are a lot of 746's and 756's on the market, not to mention several other brand and model #'s. It will never change !

You need the preamp. I made one for my IC-730 that is a dupe of the
preamp that is in the base of the SM-6 I believe. With this preamp, I
can use any mike. Normally at the house, I use an audio technica low Z
studio mike. Works dandy with that small preamp. I have it rigged up to
bypass the preamp when I switch to the kenwood. I run straight element
to it. MK

As far as rigs, I use an old IC-730 in the car. It's a real nice mobile rig, that can be had for 300-350$ average. That would leave enough for an antenna. The 730 is very easy to use in the car. Has three tuning rates, so is a breeze to tune while driving down those bumpy roads, and has a good receiver also. Quad conversion, and will support pass-band tuning if you have the optional filter. It's the cheapest "decent" rig I can think of on the used market. You can also get Kenwood TS120-130's for about the same price, but I much prefer the IC730. The kenwoods only have one fast tuning rate, and dialing them in on a bumpy road is the pits.

I have a UX-39A 220 band module and data cable for the Icom 900/901A
multiband radios that I am not using. (No 220 here)
I am willing to sell it for $220 plus shipping or trade for a BP/BR UHF
440/450 duplexer that is in good working order.
If interested,

I, like many here on the newsgroup, am tired of all the F/A EBAY
crap. I see people write about filtering, but I am not sure how to do
this. I have looked through the help section and have found nothing. Can
anyone help?

I think it only became a problem if you operated 6 meters and the
antennas were fairly close together. I don't think HF caused the
problem, but I sure someone here will correct me it I'm wrong.

The title says it all. It's come to my attention a new worm virus is on the loose, e-mail style. PrettyPark.exe is the file name. You want to steer clear of this puppy. If you get an e-mail with it, delete the message. Whatever you do, don't open the prettypark.exe file. I know this deviates from radios, but could save a system or two from grief. The key to nipping these things in the bud, is spreading the word quick.

No, just any great change in frequency. But like the other guy said,
it's always a good idea to dip the plate , just to make sure it's in
tune. Never know, the antenna may have changed a tad...The loading is
not that critical. Once you know where it is for each place you operate,
you can just put it back to it's preset position, and just dip the
plate. There is one quirk about kenwood hybrid rigs you should know,
when in the "tune" position, you have a reduced screen voltage, so you
if you plan on running the normal 100w, and tune up using only the
"tune" position, you will end up underloaded. So you should ALWAYS do
final tune adjustments in the "CW" position. This way you will load up
to full power. And assure proper loading of the finals to ensure a clean
signal with no flat topping etc. The plate current will give you a good
indication of loading. On the 520, the normal "full output" plate
current should be around 200-220 mils. This is with the meter in "IP"
position. If you apply full drive, in CW position, you should show
200-220 mils. If it's higher than that, you are likely overcoupled a
bit. If it's lower than 200 mils, you are underloaded. This is bad.
Apply full drive, and add a bit of loading. Then adjust the "plate"
